Typography · Global Font Scale

Bigger when the room is bigger

One modifier bumps the readable fonts on a slide — or the whole deck — up in lockstep.

Three steps, one knob.

`scale-l` — ×1.15

Gentle bump. Slightly larger rooms; body lands near 18 pt.

`scale-xl` — ×1.3

Strong. Projection and back-of-room reading; body near 21 pt.

`scale-2xl` — ×1.5

Dramatic. Large halls and low-vision accessibility; body at 24 pt.

One multiplier

`--fs-scale` feeds 10 of the 12 tokens. The two largest headings (h1, h2) stay fixed, so titles never balloon.

Default — tuned for desk distance.

Body

Cards, lists, and prose scale up.

Titles

h1 and h2 hold steady — the title above is the same size on every step.

Subheads & chrome

h3–h6, footer, and pagination scale.

Hero

The one big number scales.

scale-l — a gentle lift.

Body

Cards, lists, and prose scale up.

Titles

h1 and h2 hold steady — the title above is the same size on every step.

Subheads & chrome

h3–h6, footer, and pagination scale.

Hero

The one big number scales.

scale-xl — projection size.

Body

Cards, lists, and prose scale up.

Titles

h1 and h2 hold steady — the title above is the same size on every step.

Subheads & chrome

h3–h6, footer, and pagination scale.

Hero

The one big number scales.

scale-2xl — the back row.

Body

Prose grows to 24 pt.

Titles

This title is unchanged.

Chrome

Footer and page number grow.

Hero

Scales too.

Across the Board

1.3×

Hero, body, eyebrow, and chrome all ride `--fs-scale` together — only h1 and h2 sit it out.

Tables scale too.

SURFACE	TOKEN	AT SCALE
Cell text	`fs-body-compact`	Grows
Column header	`fs-meta`	Grows
Plain markdown table	`fs-body-compact`	Grows
Slide title	`fs-h1 / fs-h2`	Holds

What moves when you scale.

Scales

Body, lists, cards, h3–h6, hero, chrome, table cells, code blocks, and KaTeX math all ride `--fs-scale`.

Holds

Slide titles and the big display numbers that reuse h1/h2 — KPI and stats figures, quote marks.

Independent

Mermaid diagrams render their own SVG text; the scale doesn't reach inside. Size those at the diagram level.

One slide, or the whole deck.

One slide

`<!-- _class: cards-grid scale-xl -->` — the spot directive scales just this section.

Whole deck

Put `class: scale-xl` in the front matter — every slide grows.

Composes

Stacks with any layout or variant — `dark`, `kpi`, grids — it only sets a custom property.

Not a size picker

For one wrong element, fix its token. Scale is for magnitude, not surgery.

Author once at desk-distance, then scale up for the projector — the proportions you tuned come along for free, and the titles stay put.

Reach for it when the room demands it

Same deck, two distances.
