Lattice · Feature deck

A chart may move a state to cross fewer lines.

`rearrange` lets a wrapped state chart or flowchart leave the written order when that draws a cleaner chart. It is off unless you ask.

Written order

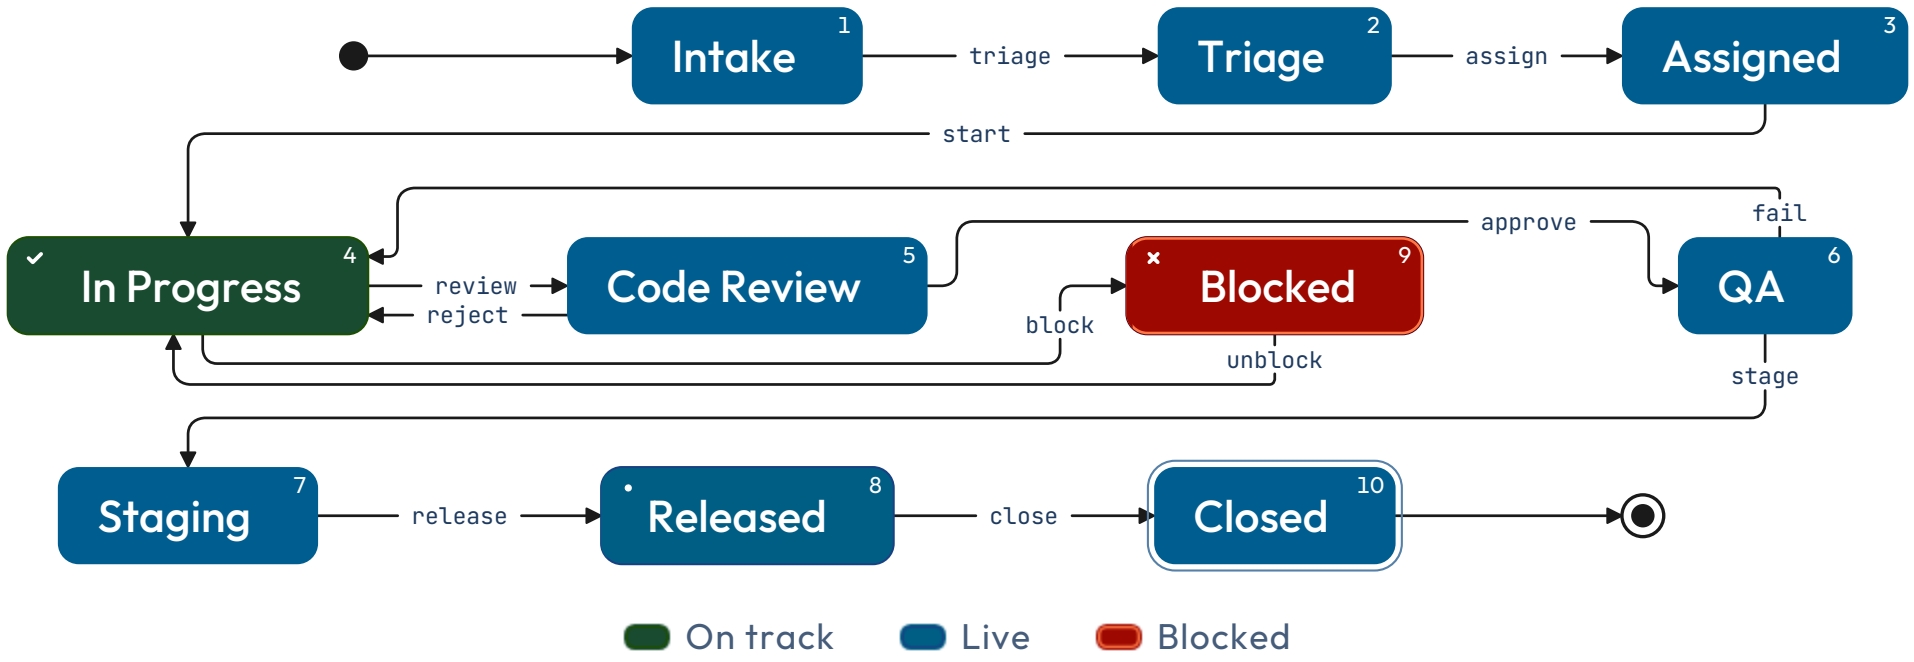

Blocked is written last, so it lands at the end.

Its two lines to In Progress reach back a whole row.

rearrange

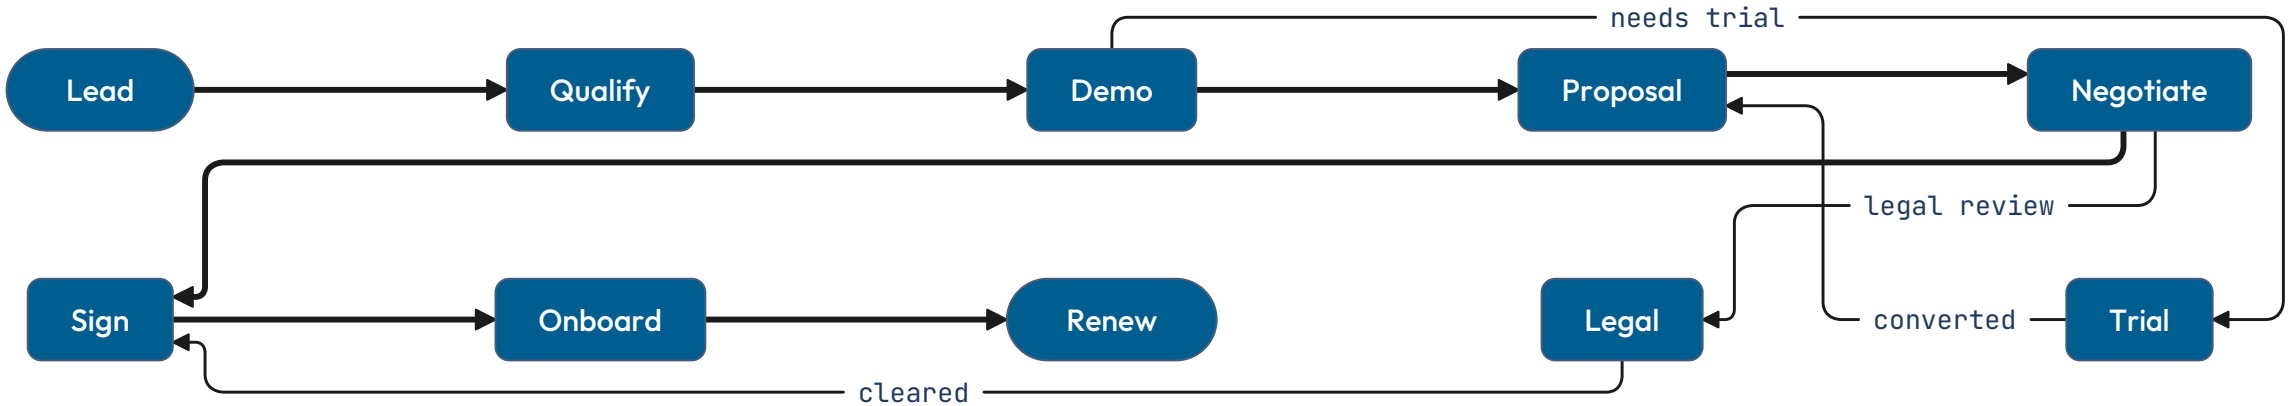

With rearrange, Blocked sits beside the state it leaves.

The badges still number each state by its place in your list.

Written order

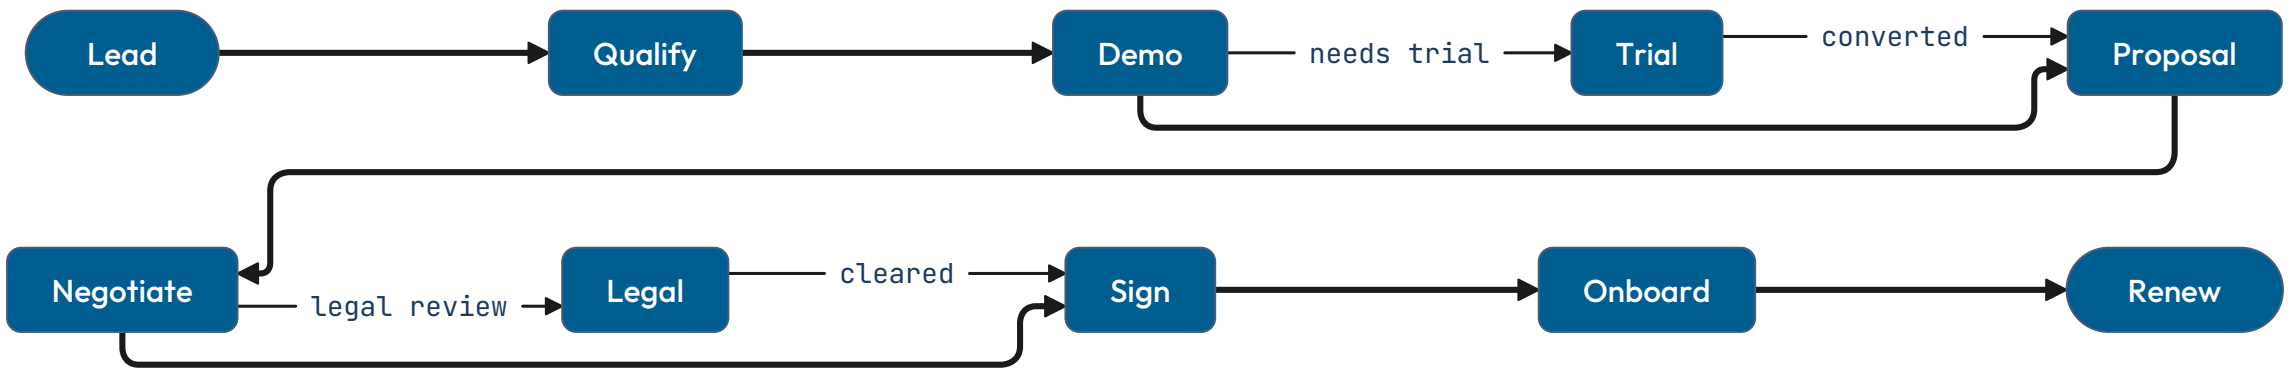

Detours written last run back across the flow.

Legal and Trial are written after the main flow.

rearrange

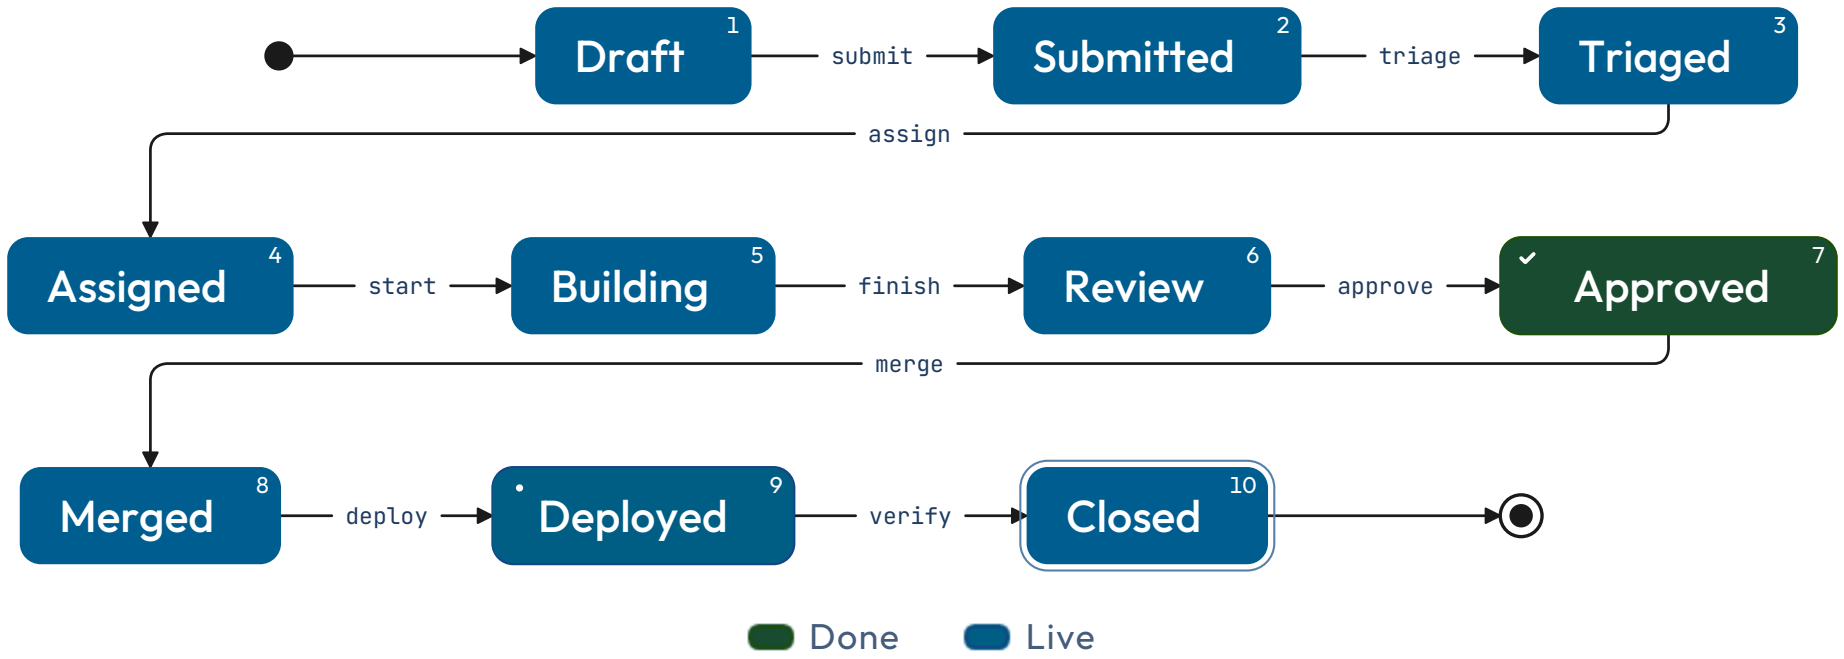

With rearrange, each detour sits beside its step.

The chart moves a shape only when that draws a cleaner chart.

Nothing to fix

A chart that already reads cleanly draws as written.

With no crossing to remove, rearrange changes nothing.
