Component · inventory

One Content, Four Looks

The next four slides carry the **byte-identical** content — same eyebrow, same heading, same four items, same insight. Only the variant changes: `inventory`, then `inventory cards`, then `inventory timeline`, then `inventory editorial`. Pure CSS, no re-author.

Framework · Four Components

The system has four moving parts.

01 Signal Intake.

Weekly collection across conversations and market data.

02 Scoring Model.

Scored on confidence, recency, and relevance.

03 Decision Log.

Every call recorded with the signals behind it.

04 Calibration Loop.

Outcomes compared to predictions each cycle.

Framework · Four Components

The system has four moving parts.

Signal Intake.

Weekly structured collection across conversations and market data.

Scoring Model.

Each signal scored on confidence, recency, and relevance.

Decision Log.

Every call recorded with the signals that informed it.

Calibration Loop.

Outcomes compared to predictions each cycle.

"Signals without decisions are just noise."

Framework · Four Components

The system has four moving parts.

Signals without decisions are just noise.

1

Signal Intake.

Weekly structured collection across conversations and market data.

2

Scoring Model.

Each signal scored on confidence, recency, and relevance.

3

Decision Log.

Every call recorded with the signals that informed it.

4

Calibration Loop.

Outcomes compared to predictions each cycle.

Framework · Four Components

The system has four moving parts.

Signal Intake.
Weekly collection across conversations and market data.

Scoring Model.
Scored on confidence, recency, and relevance.

Decision Log.
Every call recorded with the signals behind it.

Calibration Loop.
Outcomes compared to predictions each cycle.

Same Content. Four Looks.

One component · four variants

Swapping the variant on fixed content is the Form axis moving alone — `inventory` keeps the eyebrow, title, items, and insight identical; only the look changes.
