Key insight · Below-note · One cell

The universal coda

The two blocks an author can add to almost any slide now have a host — and the host decides how they dock, so a component never has to.

The step above the band is wider than any step inside a block.

A card list sets sixteen pixels between its own cards.

The band above it used to get eight — half as much.

A separator between two kinds of block cannot be smaller than the one between peers.

The band now carries its own step, identical on every layout.

KEY INSIGHT

Key insight: the panel reads as a different kind of block, not a fourth card.

Attachment · selector shape vs. a host

Two code columns, and a band that belongs to neither.

BEFORE · THE PANEL HAD NO HOST

```
section:not(.quote):not(.math)
  > blockquote { … }
section:not(.quote):not(.math)
  > .cell-stage > blockquote { … }
```

AFTER · THE PANEL HAS A CELL

```
section .cell-coda
  > blockquote { … }
```

KEY INSIGHT

Key insight: this blockquote used to print as unstyled body text inside the right-hand column.

A filled panel needs more air beneath a filled panel than prose does.

```
// The kernel runs FIRST, on the authored body.
function harvest(section) {
  const beats = trailingBeats(section);   // blockquote, then note
  if (!beats.length) return section;      // nothing to host
  return wrap(beats, 'cell-coda');        // one cell, docked by structure
}
```

KEY INSIGHT

Key insight: running first is what saves the layouts that used to delete the node.

Three structures cover every layout.

Column `57 layouts`

The band is simply the last child, so nothing is declared.

Row `3 layouts`

The band breaks to a full line, never a third column.

Grid `1 layout`

The band spans every track in an implicit final row.

KEY INSIGHT

Key insight: measured, not assumed — so the CSS has three arms and names no component.

Both beats share the cell, in reading order.

Key insight

The takeaway. It summarizes the body, so it sits directly beneath it.

Below-note

The footnote. Source, scope or caveat — it goes last.

One step

The cell owns the distance to the body.

KEY INSIGHT

Key insight: one cell, one rhythm — whether a slide ends with an insight, a note, or both.

Source: measured on the real emulator render, in Chromium, across all sixty-one layouts.

> *A layout that uses the trailing element for its own anatomy declares it, and the contract stops advertising a block it never rendered.*

THE OPT-OUT IS THE POINT — QUOTE TAKES THIS BLOCKQUOTE AS THE QUOTATION.
