Authoring · Slot-header lift

Numbers without the asterisks.

`kpi` and `stats` now bold their figures for you — the `**…**` is optional.

Impact · Pilot Results

Six months of results across four product teams.

Same authoring as every other slot layout: parent item, nested detail.

One authoring contract, two fewer footguns.

Parent list item is the number It renders in display type automatically — typing `**$2.4B**` is now an idempotent no-op, never wrong.

Detail lives in the nested sublist The nested body is what tells the engine where the number ends, exactly like every other slot layout.

`stats` lost its magic The old parse-and-rebuild into `.stats-row` is gone; the list is styled directly, so all three render paths agree.

Related

Same numbers, less markup.

`big-number` — when one figure carries the slide

`split-panel metric` — one focal KPI with a paragraph of prose

`stats` — an ungoverned row of headline figures

`kpi` — value, target, trend, and status pills together
