Feature demo · LTT step 2

One timing track for every player.

The exported deck plays from the same timing file that video export will read.

Holds read off the page

down from one per slide: the timing file carries every hold now.

How a narrated slide plays.

STEP 01

Hold — the arriving slide waits its beat.

STEP 02

Speak — each sentence plays its own clip.

STEP 03

Breathe — a pause after every sentence.

STEP 04

Advance — the next slide takes its hold.

Section 02

When a clip fails

Clips that stop narration

down from one: a clip that will not decode plays as its caption.

Where the timing is checked.

STEP 01

Source — the conformance fixtures run against the library itself.

STEP 02

Inlined — the same fixtures run against the text the player ships.

STEP 03

Minified — and against that text after the production minifier.

LTT step 3

Sign off the export; video builds on it next.
