Diagram · Mindmap · Categorical

One branch, one color

Every node in a mindmap branch now takes that branch's color, whatever its shape and however many branches the map has. Each branch line matches its boxes, and the root has a color of its own.

01 · The repro, light

Six branches, six colors, and a root that stands apart.

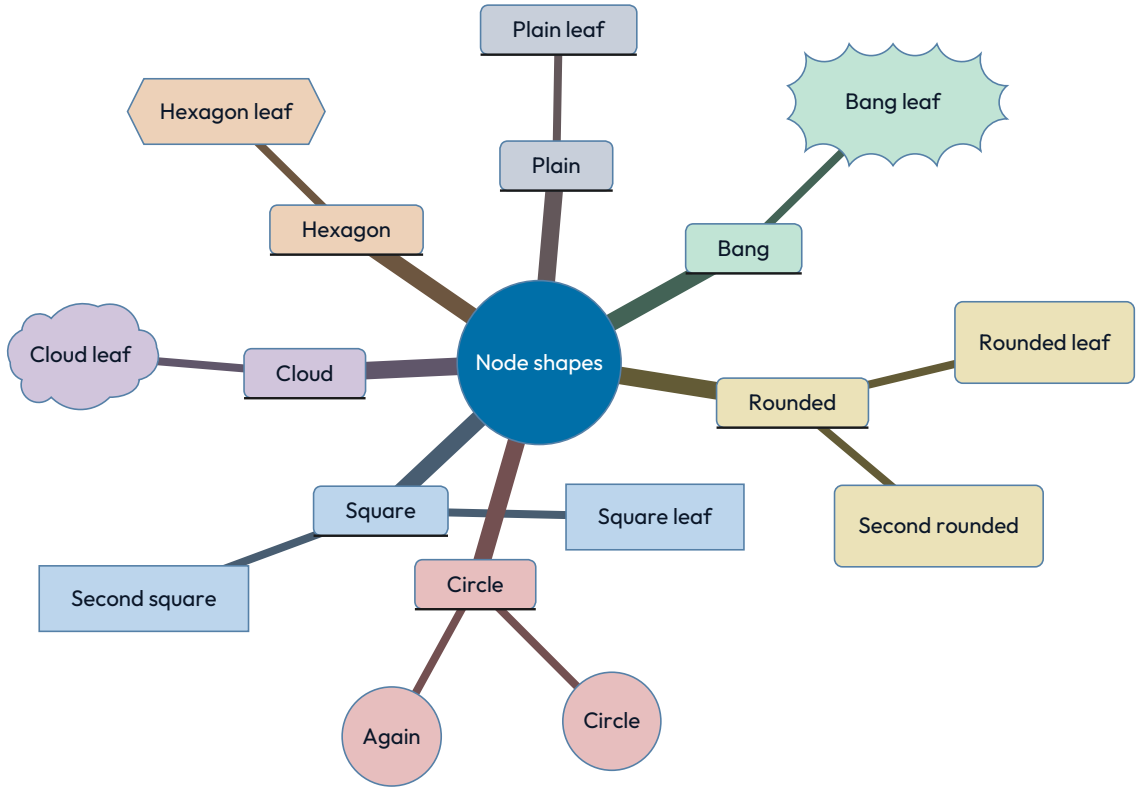

02 · The repro, dark

On a dark slide each line lightens, and keeps its branch's hue.

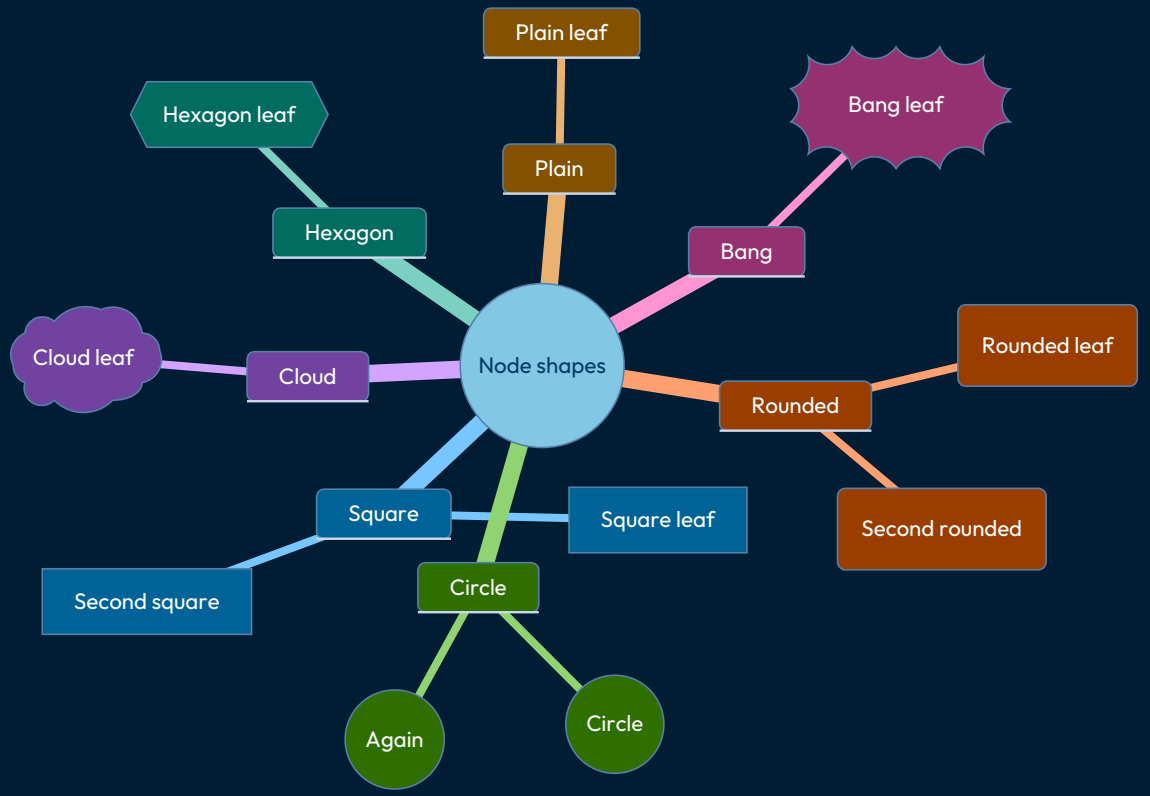

03 · Every node shape, light

Square, rounded, circle, bang, cloud, hexagon and plain all follow the branch.

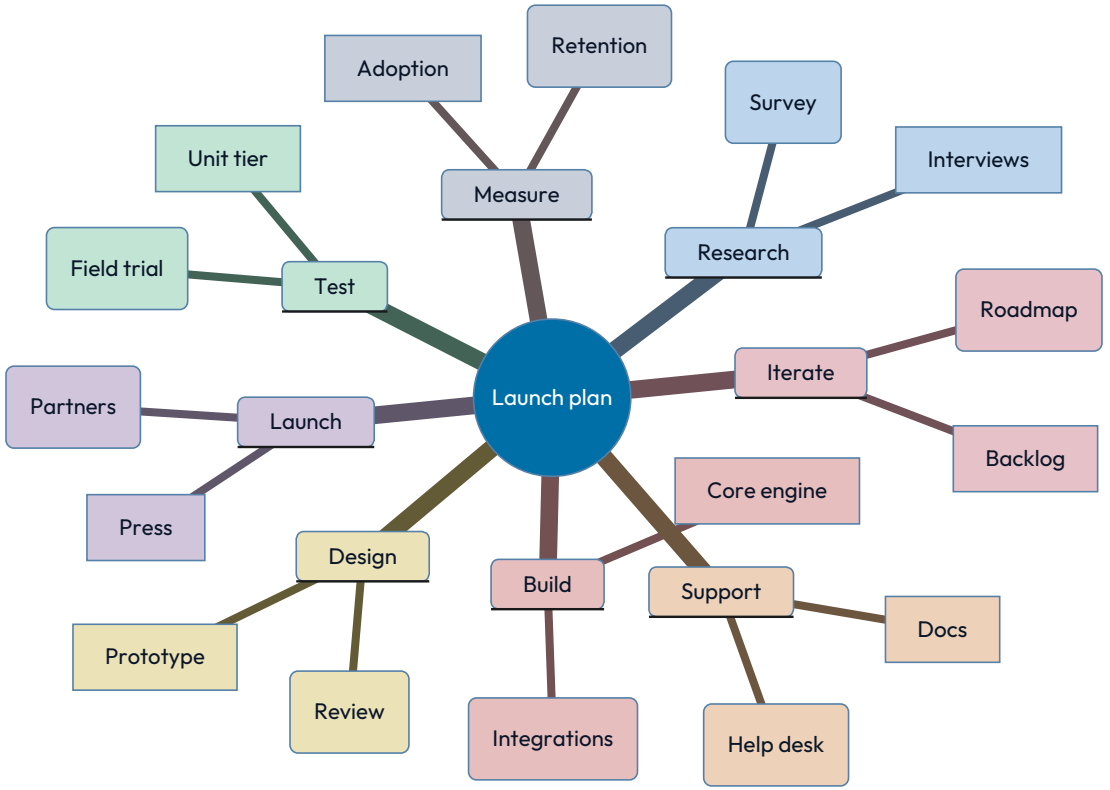

04 · Every node shape, dark

The same seven shapes on a dark canvas.

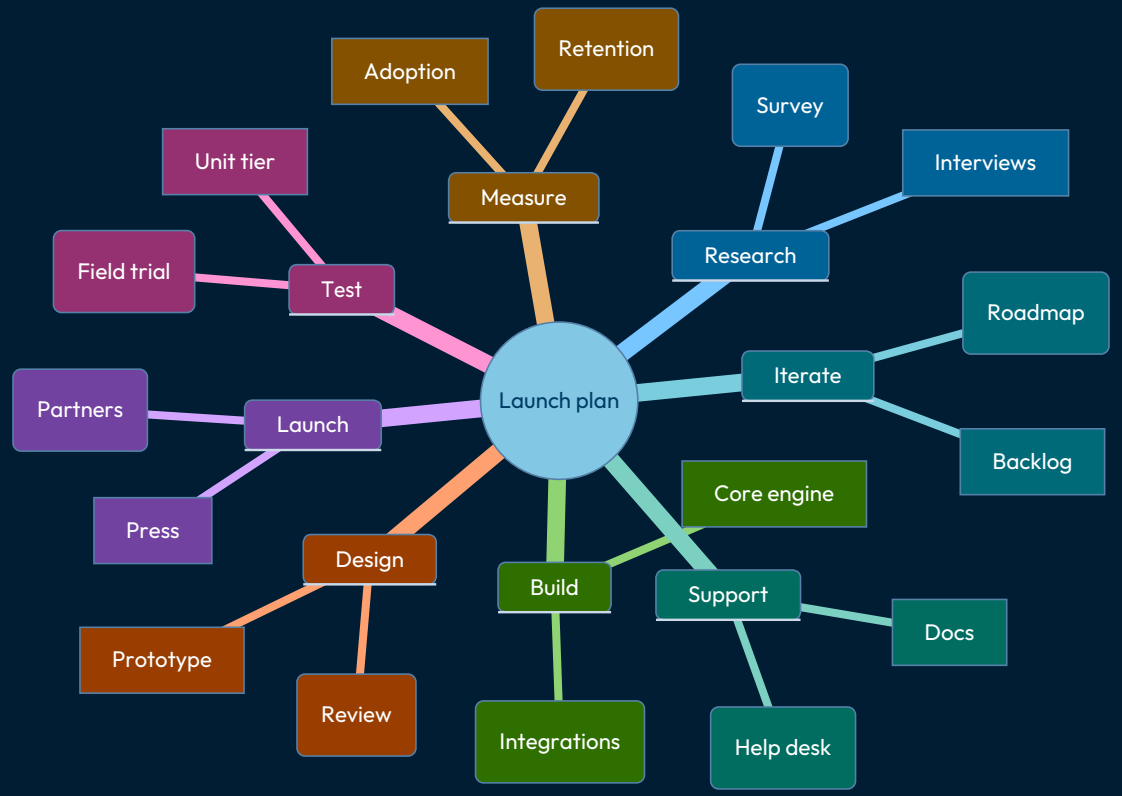

05 · Eight branches, light

Past five branches the colors keep going instead of falling back to blue.

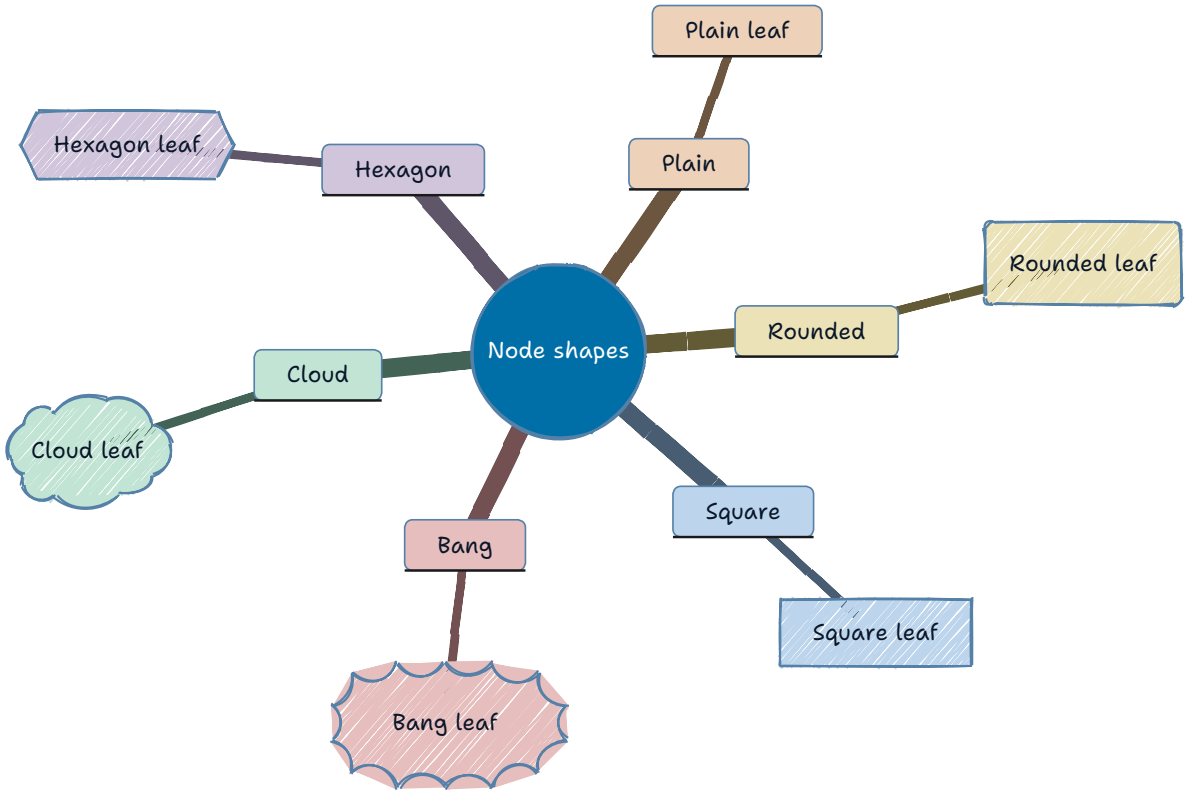

06 · Eight branches, dark

Branches seven and eight get colors of their own in dark mode too.

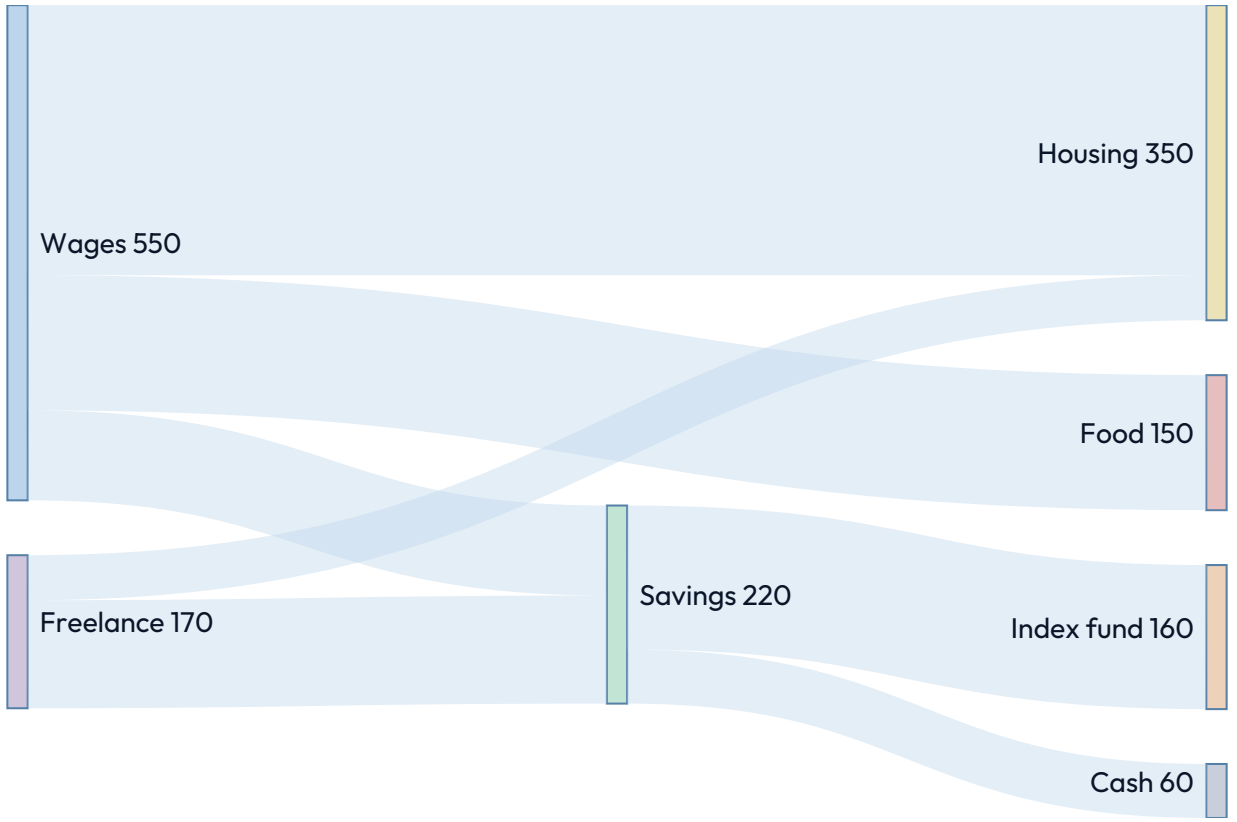

07 · HAND-DRAWN LOOK

Under the sketch look, each branch hatches in its own color.

08 · Sankey, unchanged

Sankey nodes still cycle by position, exactly as before.

09 · What changed

Four fixes, all in one Mermaid stylesheet.

Position

The order-based node cycle skips mindmap, so leaves stop taking a color from their place in the markup.

Range

Node fills follow every branch Mermaid numbers, for every shape.

Lines

Each line takes its branch's fill: darker on light, lighter on dark.

Root

The root takes the deck accent, apart from the first branch.
