Panes · progress and matrix-grid

A row label keeps its width in a pane

H1 2026 · Phase 1 readiness

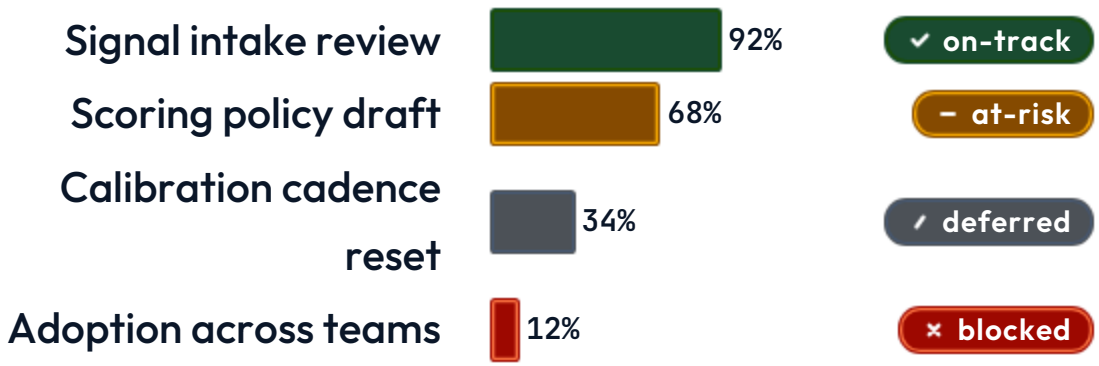

On a slide, the name column is a fifth of the width.

— This slide is unchanged: the fix applies only inside a pane.

H1 2026 · A 50% pane

In a half-width pane the names still read in full.

Two workstreams are behind plan

Calibration waits on the scoring draft

— Before: a 105px column set every name one word per line, and the pane clipped at its fifth row.

H1 2026 · A 35% pane

A narrow pane gives each name its own row.

A pane squarer than the slide sets the name above its bar

The bar keeps the pane's full width

H1 2026 · A stacked pane

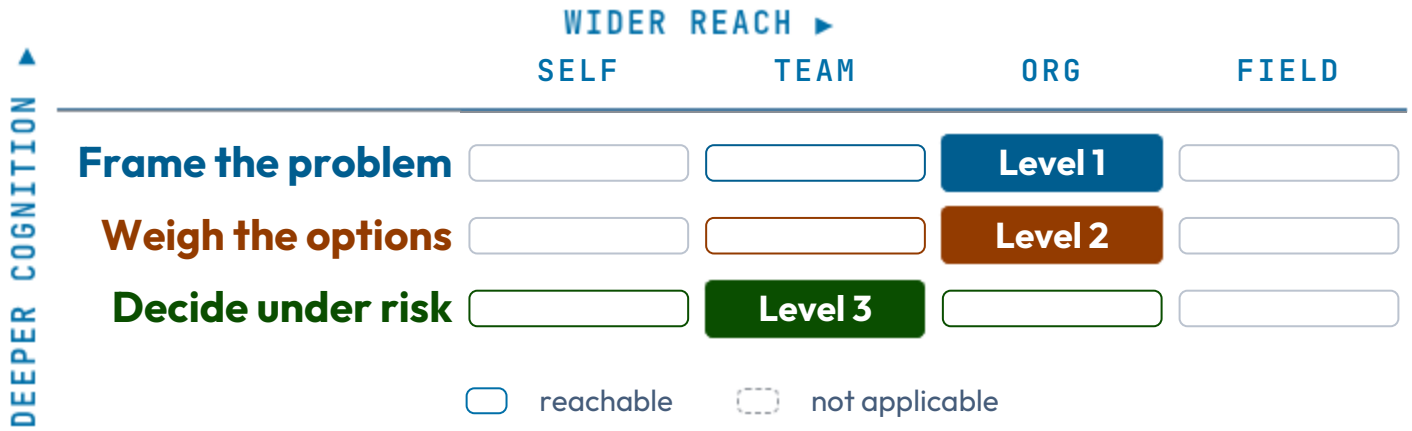

Stacked, the pane is slide-wide and nothing moves.

A stacked pane's label column is the slide's own

Capability rubric · A 65% pane

Each row name reads on one line, and so does each cell.

Each verb is a row the reader scans first

A filled cell names the level it reaches

— Before: the row-name column was one fifth of the pane, and each name set one word per line.

On a slide, the grid is unchanged.
