Lattice · Feature deck

Where am I in this deck?

The section rail answers "which part", and the page number answers "how far".

Three parts, and the mark each one wears

01 What the rail means

02 Where it sits

03 How it looks

What the rail means

Each mark is one section of the deck

- The divider before this slide drew the marks larger, where the rail sits on this slide
- The footer repeats them small, with this section lit in the heading's ink
- The page number keeps its own column, so it is not read as one more mark and the rail never moves
- A deck needs three sections and fifteen slides before the rail draws on its own; this one says `progress-rail: on`

Where it sits

The rail can sit on the center line

- `progress-rail: center` moves it to the middle of the footer band
- The page number stays at the right edge
- The footer words keep the band's left half, and the rail holds the center on every slide

Or stand upright on the right edge

- `progress-rail: edge` puts it in the right margin, at mid-height
- It leaves the footer band to the footer words and the page number
- One slide can move its own rail with `_class: progress-rail-edge`

03

How it looks

A bar instead of dots

- `progress-rail: bar` draws one thin segment per section
- Past eight sections the rail turns into a bar by itself
- `progress-rail: off` hides the rail and the divider markers together

Topics name their section

The eyebrow above says which section this topic belongs to, read from the divider.
