New component · inventory · stack · structure

The questions we know are coming.

The end-of-pitch slide that pre-empts the room — the three or four hardest questions the audience will raise, each met with a prepared answer. The question reads as a prompt; the answer carries the substance.

A few defended answers, not a help page.

Q&A is a *function*, not a flat list: you close the objection on your own terms. Author it nested — the top-level item is the question, the answer sits under it.

- Questions are indexed automatically, so `ul` and `ol` render the same.
- Five looks: the editorial **ledger** (default), `spine`, `rail`, `tab`, `grid`, plus universal `solo`, `compact`, `dark`.
- Distinct from a reference `faq` (terse look-ups) and `list-criteria` (criteria you score). q-and-a *defends* a recommendation.

The ledger — default

What the board will press on.

01 **Why not extend the current vendor one more year?**

The renewal lands in Q3 and locks us in through 2028. Switching now costs a single quarter of migration; switching after renewal costs three.

02 **What happens to the team mid-migration?**

No headcount change. The same four engineers run both stacks through the eight-week overlap, then the legacy stack is decommissioned.

03 **How confident are we in the savings?**

The $1.2M is contracted, not projected — the signed rate differential, before any usage growth.

Spine — a sequential walkthrough

Take the objections in order.

Why not extend the current vendor one more year?

The renewal lands in Q3 and locks us in through 2028. Switching now costs a single quarter; switching after renewal costs three.

What happens to the team mid-migration?

No headcount change. The same four engineers run both stacks through the eight-week overlap, then the legacy stack is decommissioned.

How confident are we in the savings?

The $1.2M is contracted, not projected — the signed rate differential, before any usage growth.

Rail — question / answer columns

The exhibit version.

01	**Why not extend the current vendor one more year?**	The renewal locks us in through 2028. Switching now costs one quarter; after renewal, three.
02	**What happens to the team mid-migration?**	No headcount change — four engineers run both stacks through the eight-week overlap.
03	**How confident are we in the savings?**	The $1.2M is contracted, not projected — the signed rate differential.

Tab — underlined prompts

The most editorial read.

Why not extend the current vendor one more year?

The renewal locks us in through 2028. Switching now costs a quarter; switching after renewal costs three.

What happens to the team mid-migration?

No headcount change. The same four engineers run both stacks through the eight-week overlap.

How confident are we in the savings?

The $1.2M is contracted, not projected — the signed rate differential.

Grid — two-up density

When you have a fourth.

01

Why not extend the vendor?

Renewal locks us in through 2028; switching after it costs three quarters instead of one.

02

What happens to the team?

No headcount change. Four engineers run both stacks through the eight-week overlap.

03

How confident are we in the savings?

The $1.2M is contracted, not projected — the signed rate differential.

04

What is the rollback plan?

A one-command revert to the pinned release, rehearsed weekly in staging.

Solo — one question, the whole slide

The one we know is coming.

01 If the pilot fails, what have we actually lost?

One quarter and $180K, fully recoverable. The contract caps exposure at the pilot scope, with no auto-renewal and a thirty-day exit. The downside is bounded; the upside is the whole thesis.

Five we expect, numbered and tightened.

01 **Why now rather than next fiscal year?**

The credits expire in December.

02 **What is the rollback plan?**

A one-command revert, rehearsed weekly.

03 **Who signs off on go-live?**

The change-advisory board.

04 **How does this affect the SLA?**

The 99.9% target holds.

05 **What if adoption stalls?**

Opt-in for thirty days, with a fallback.

q-and-a

Pre-empt the room.

When the hard questions are predictable,
answer them before they are asked.
