Feature demo · lib/samples

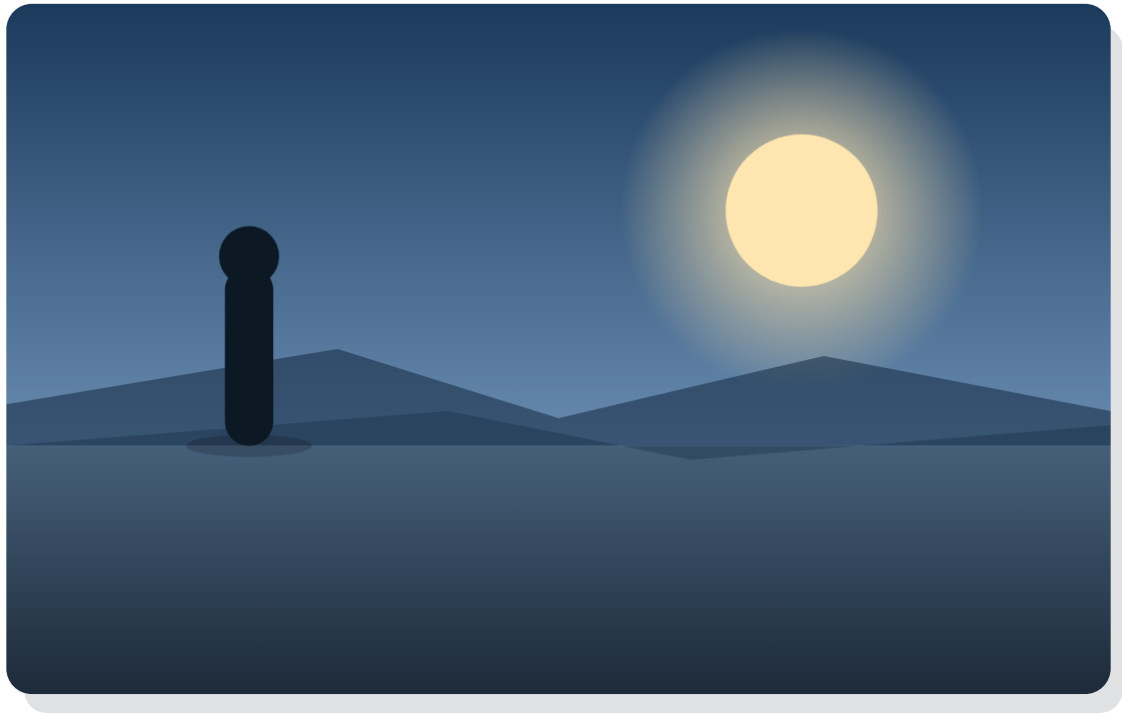

Sample images, one folder

Every picture in this deck is named `sample:<file>`. It resolves the same way in the CLI, the Playground and the Studio.

Image slide

A photo named sample:photo-wide.svg.

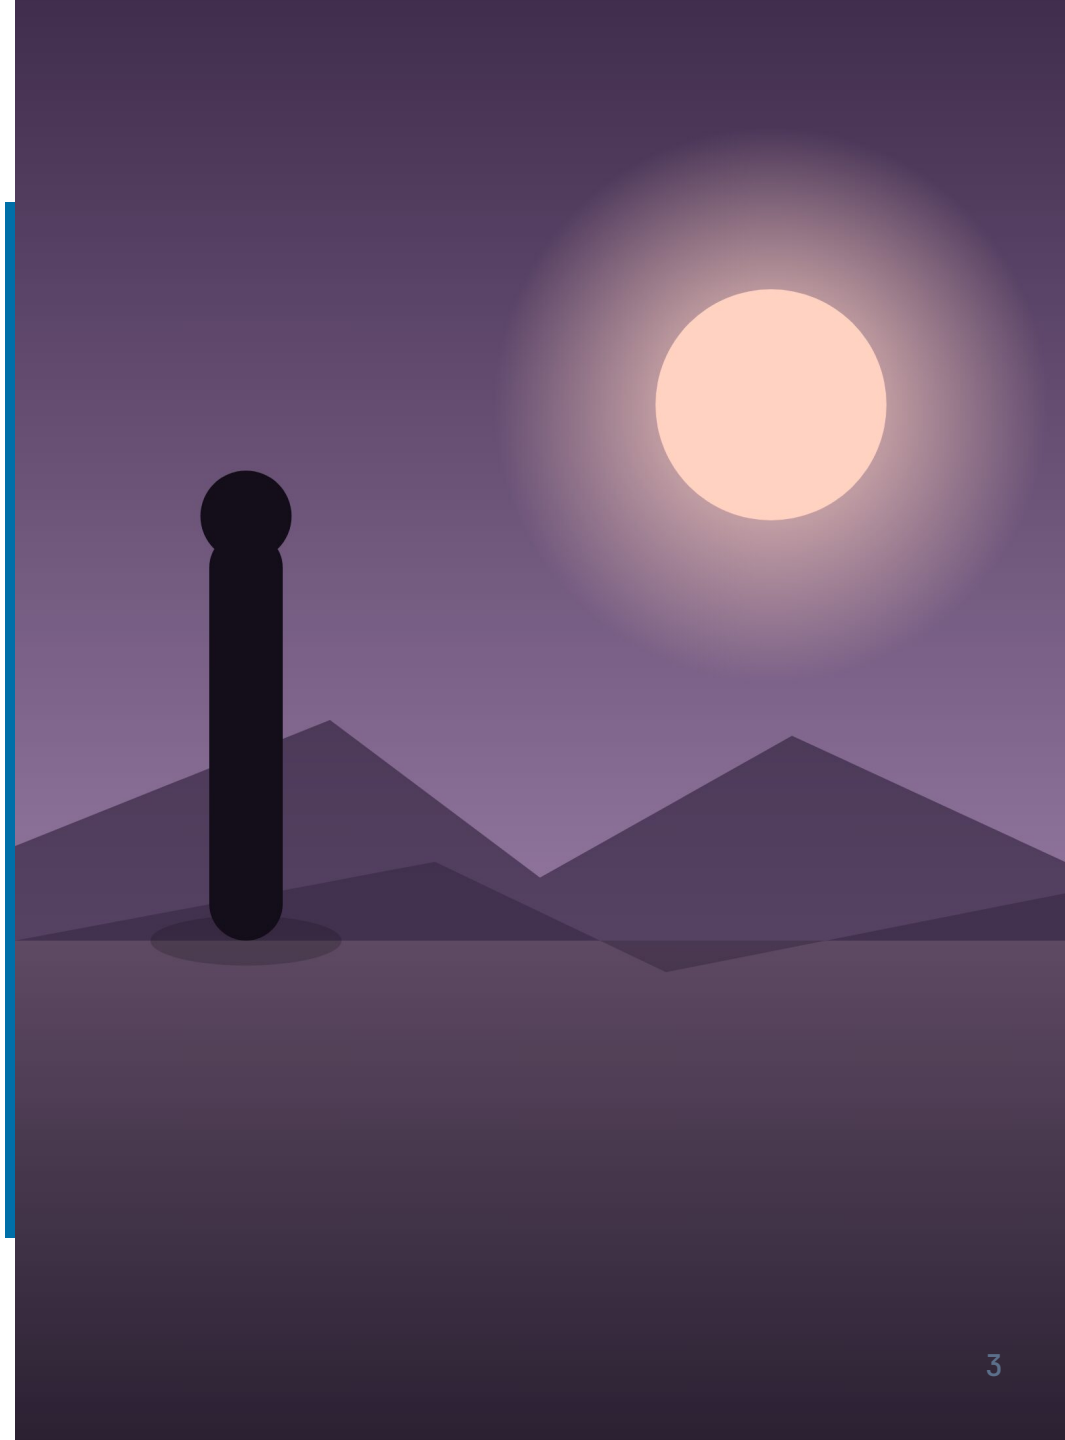

The image layout reads the photo's shape from the file in `lib/samples/`, so the composition matches what the Studio previews.

Raster sample

The JPEG twin takes the same path.

`sample:photo-tall.jpg` is a real raster photo, so a deck can test the JPEG route without bringing its own file.

Team profile

Each portrait is a sample, not a placeholder.

Ada Okafor

EXECUTIVE SPONSOR

Clears blockers above the program.

Marcus Vale

PROGRAM DIRECTOR

Runs the weekly cadence.

Priya Raman

HEAD OF DELIVERY

Staffs the pods; holds the dates.

Logo wall

The Add slide template now shows real marks.

Acme

Series B

Globex

Enterprise

Umbra

Series C

Video poster

The poster resolves like every other picture.

Ninety seconds, unscripted: signup to a published deck without touching support.

One folder: lib/samples/

sample:<file>

The deck logo in the corner is `sample:logo-acme-mark.svg`, set once in the front matter.
