A fix demo

One bar, in the tone's color

`split-panel` and `split-compare` with `tone-edge`: the tone replaces the ribbon, it does not stack on it.

CONTROL

No tone: the deck's ribbon

The bar across the supporting zone is the deck spectrum.

Reference

This is what one bar looks like.

Compare against

The next slides must show the same bar height.

PASS

Tone pass recolors the ribbon

The supporting zone's bar is the pass color. There is no second bar above it.

On track

One bar, tone-colored.

No doubling

Same height as the control.

FAIL

Tone fail, same rule

The failure color carries the edge.

Off track

One bar, fail-colored.

Same height

As the control slide.

CONTROL

Compare, no tone

Reference bar for the compare frame.

OPTION A

- a1
- a2

OPTION B

- b1
- b2

RECOMMENDATION

The deck's ribbon is the bar.

WARN

Compare with a warn edge

The supporting zone's bar is the warn color.

OPTION A

- a1
- a2

OPTION B

- b1
- b2

RECOMMENDATION

One bar, tone-colored, same height as the control.
