Lattice · Feature deck

Paint a state machine without leaving the palette.

Status words, a heavy main path, line patterns and palette slots — every one a word, and every one in the key.

The vocabulary

A status word or a slot `c1` … `c8` after a state; `=>` for the main path, `dashed` or `dotted` after a line's target.

Plain

The default reads as one system.

Every line takes the connector color; every state is a neutral tile.

The baseline the next slides paint — same machine.

The main path

A heavy arrow carries the happy path.

`=>` *for the path the machine is meant to take; the key names it.*

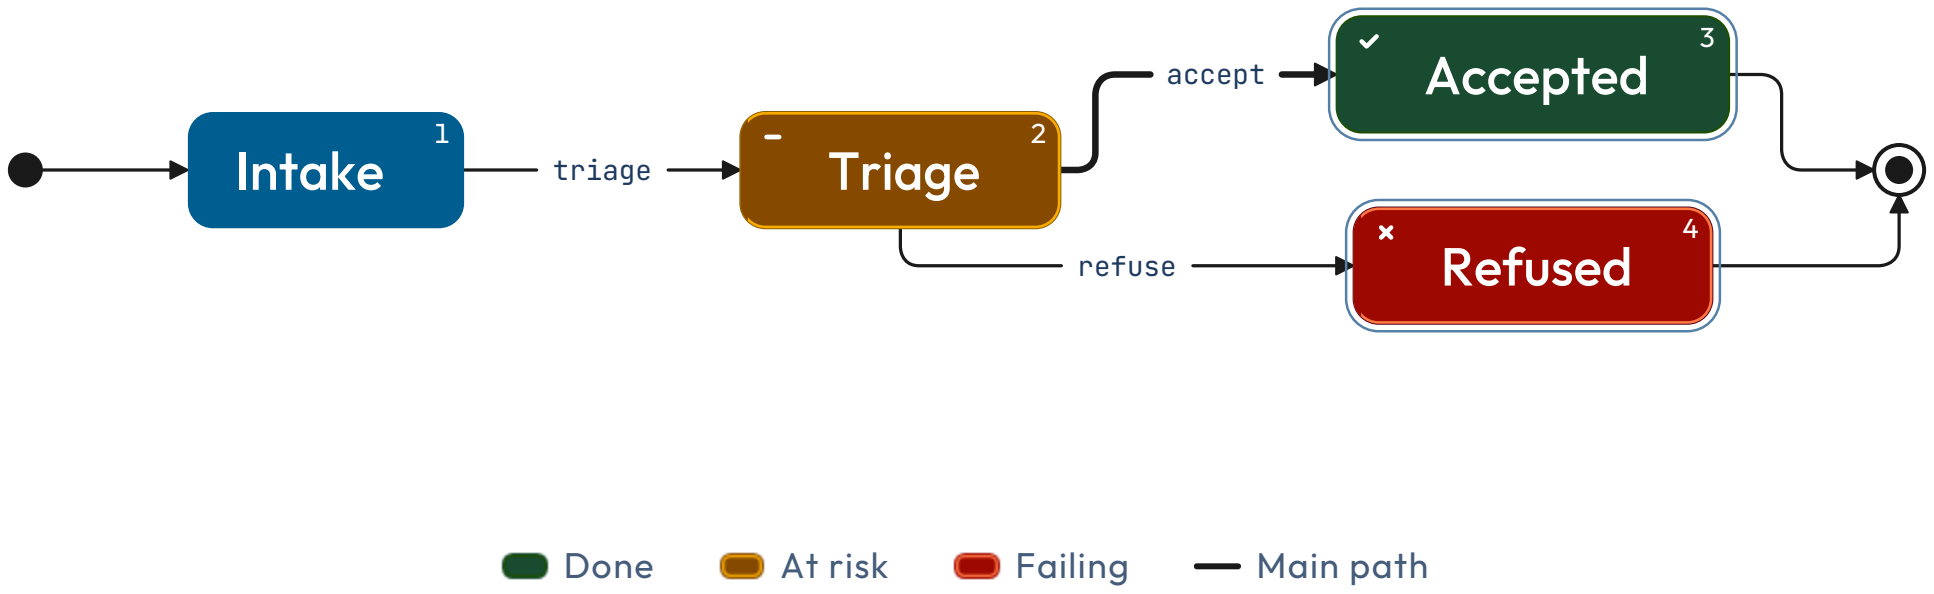

On track — Happy path -- Sent back

Same machine — a word on each line that carries meaning.

Outcomes

A status paints the tile.

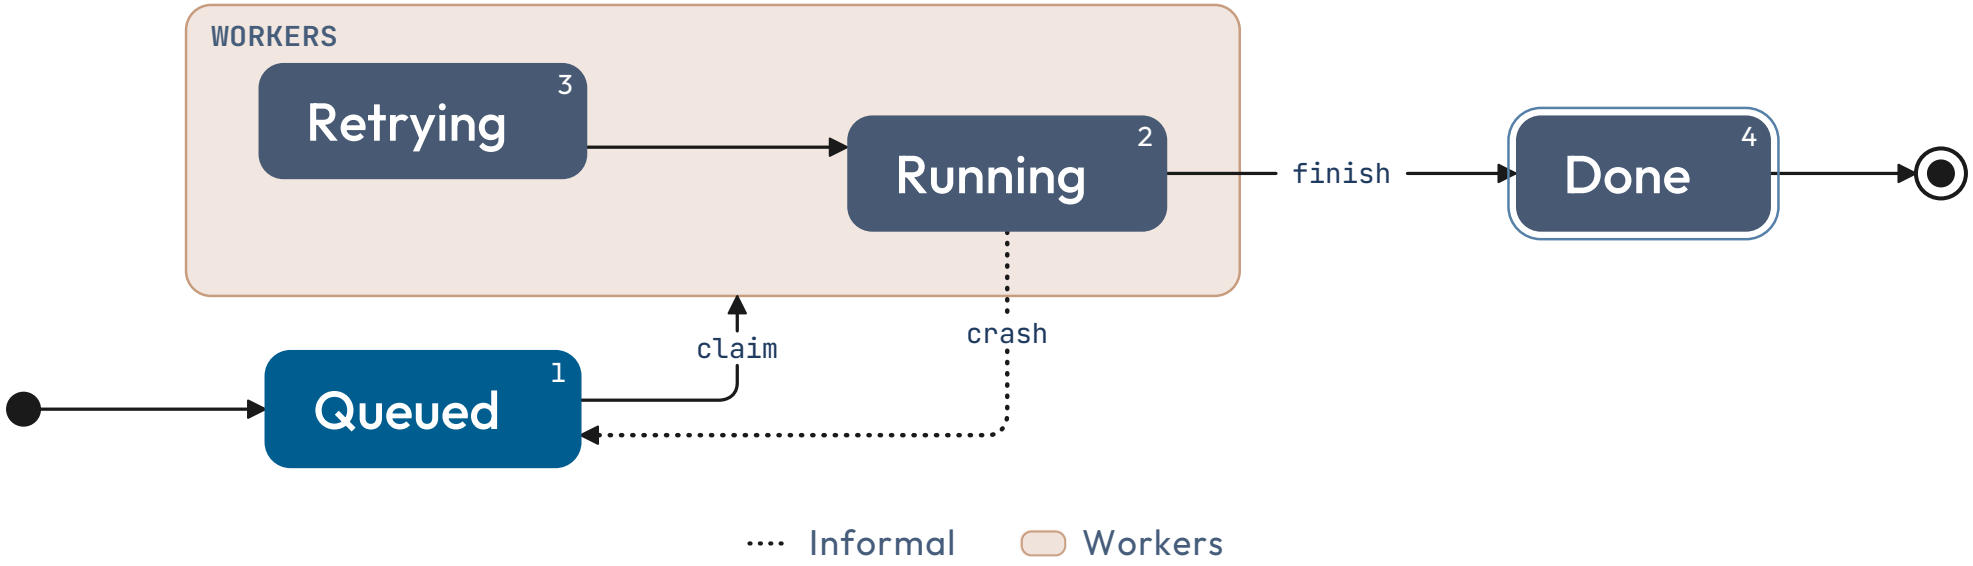

The end states carry their outcome, and words that paint alike share one key entry.

Slots

A slot names a palette color, not a hue.

`c1` *on a state,* `c2` *on a composite; the key shows a composite's slot by its name.*

A slot re-themes with the palette: no color is written anywhere.
