# State chart vs. content we've never seen.

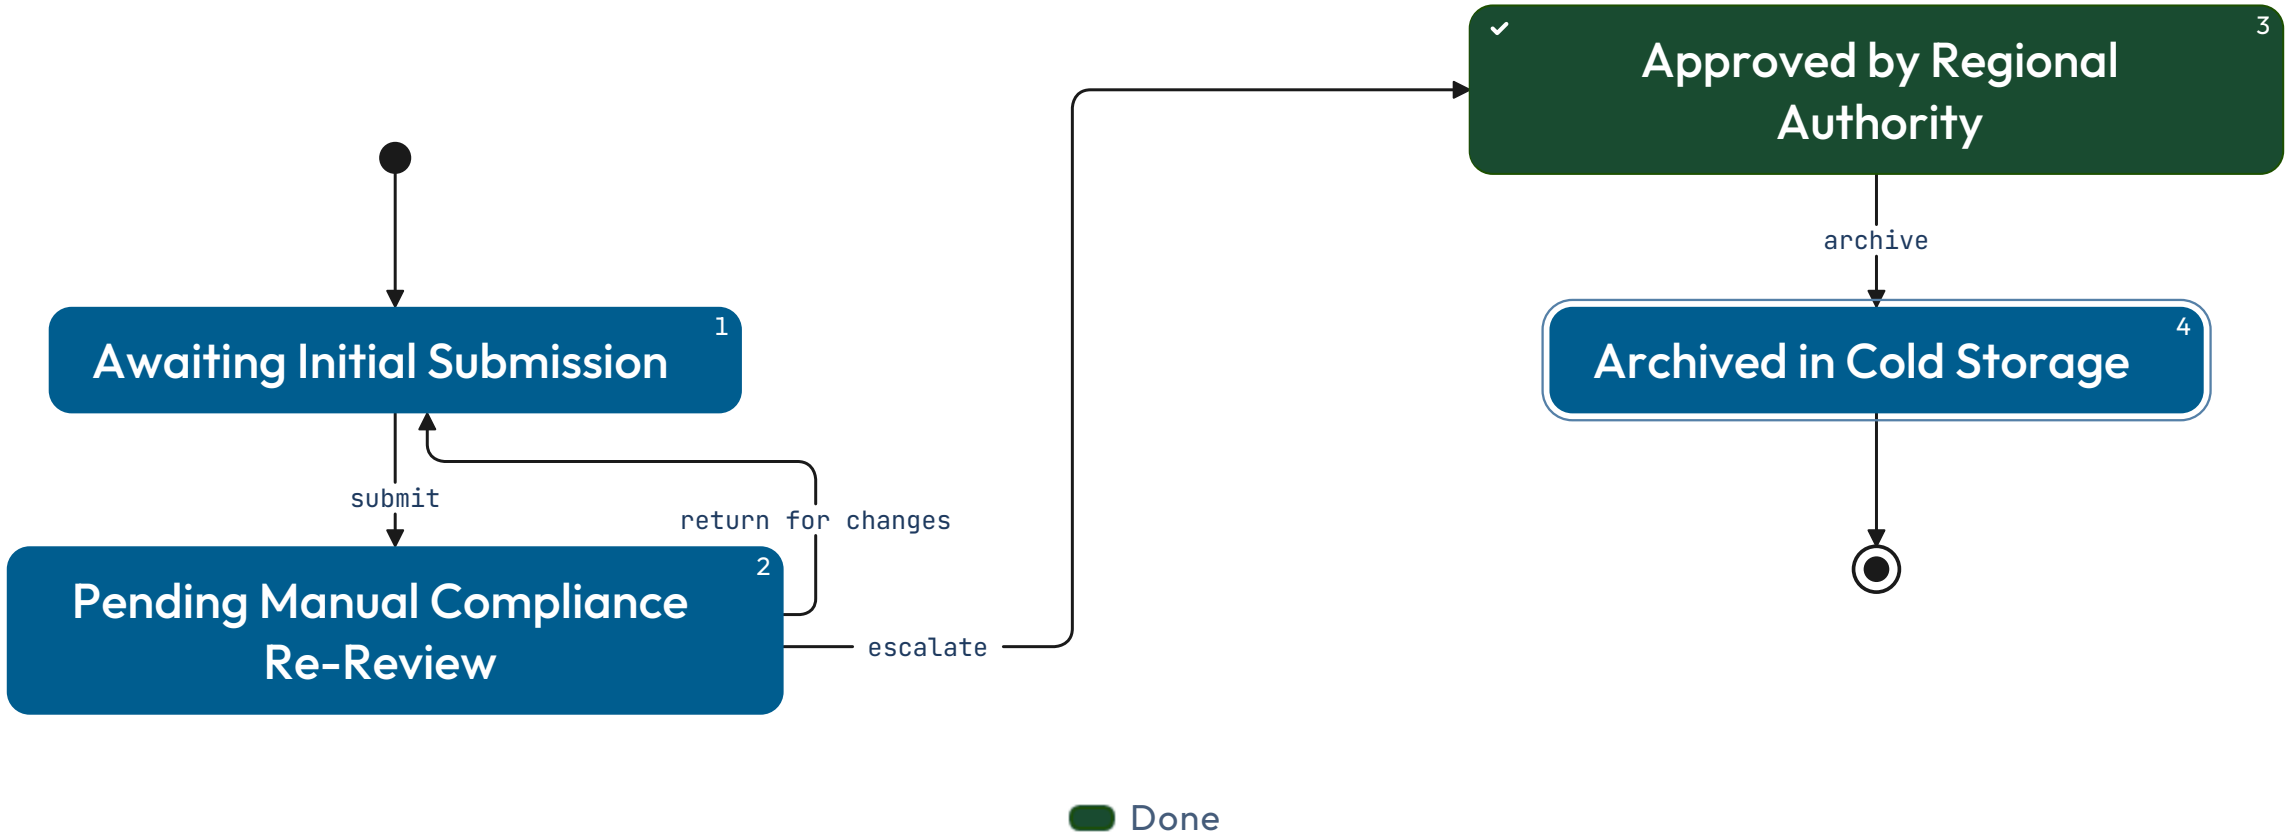

Browser-measured layout: nodes are sized by the real text engine, edges are drawn from measured rects. These slides try to break it.

# Single-letter states.

1 — very short labels

# Long state names.

2 — long labels that would overflow a fixed box

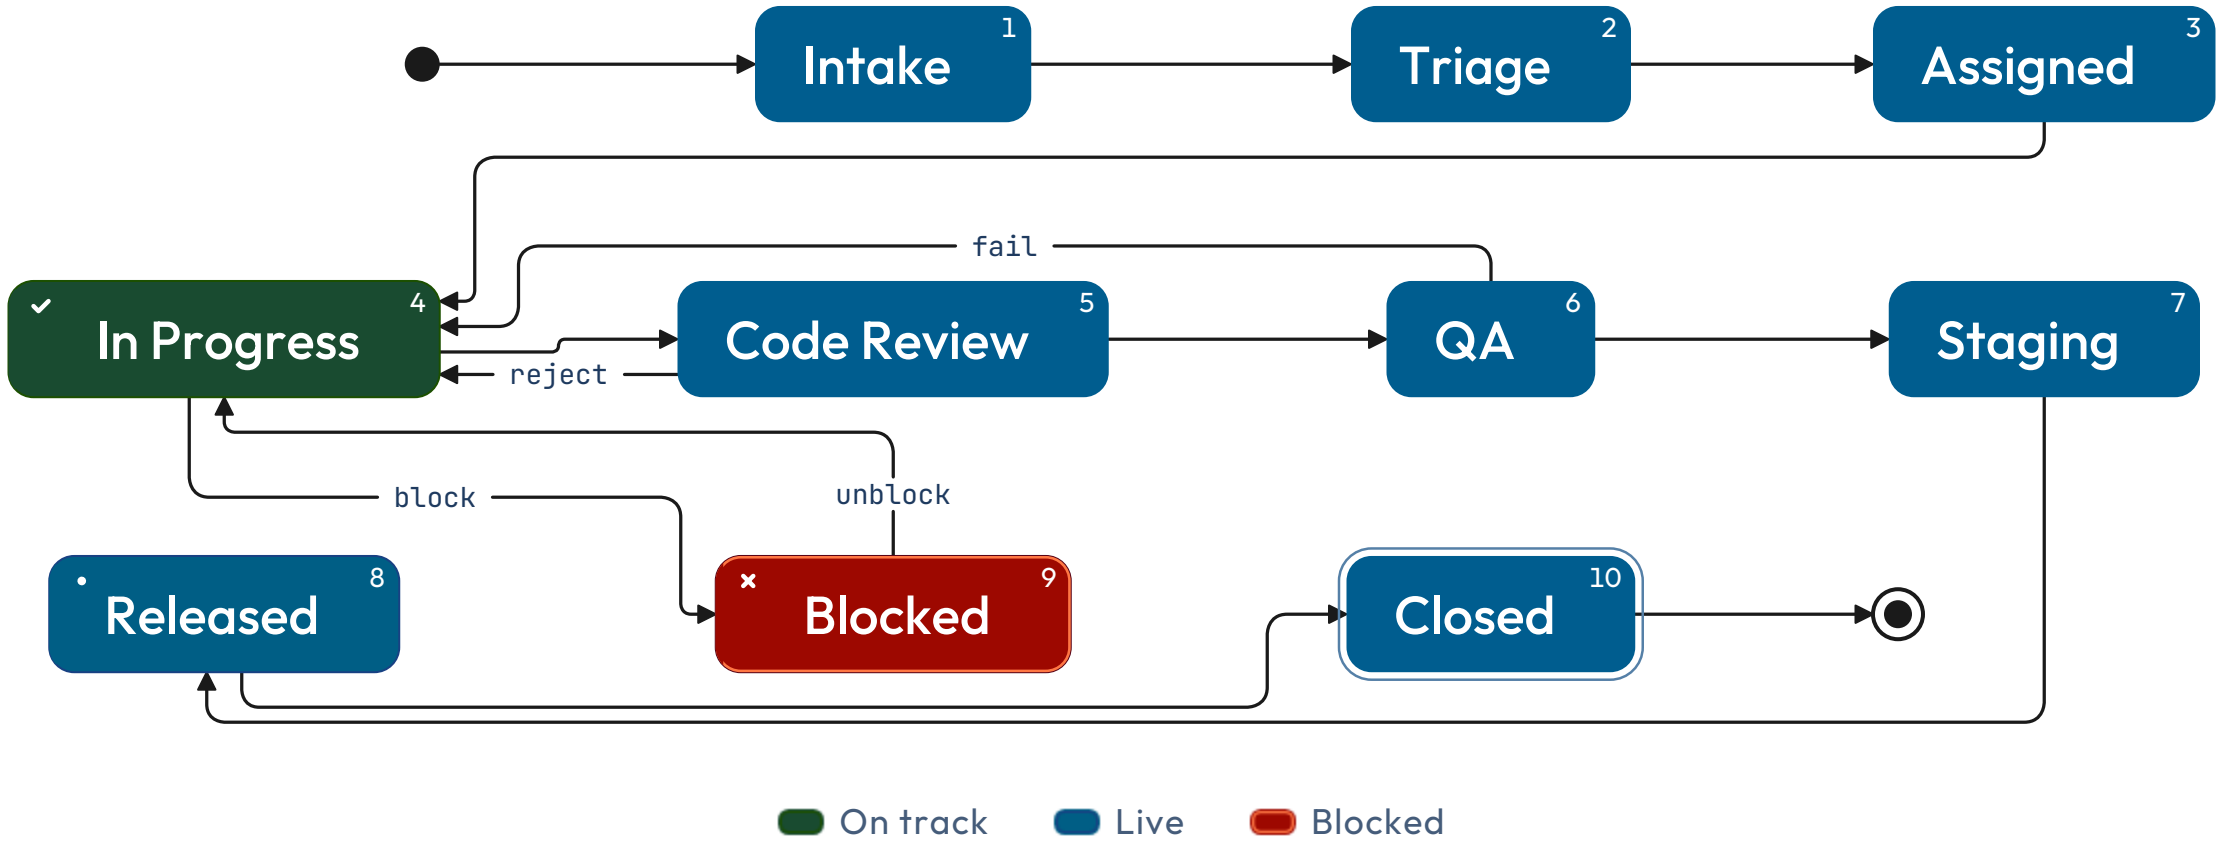

□□□□

# CJK state labels.

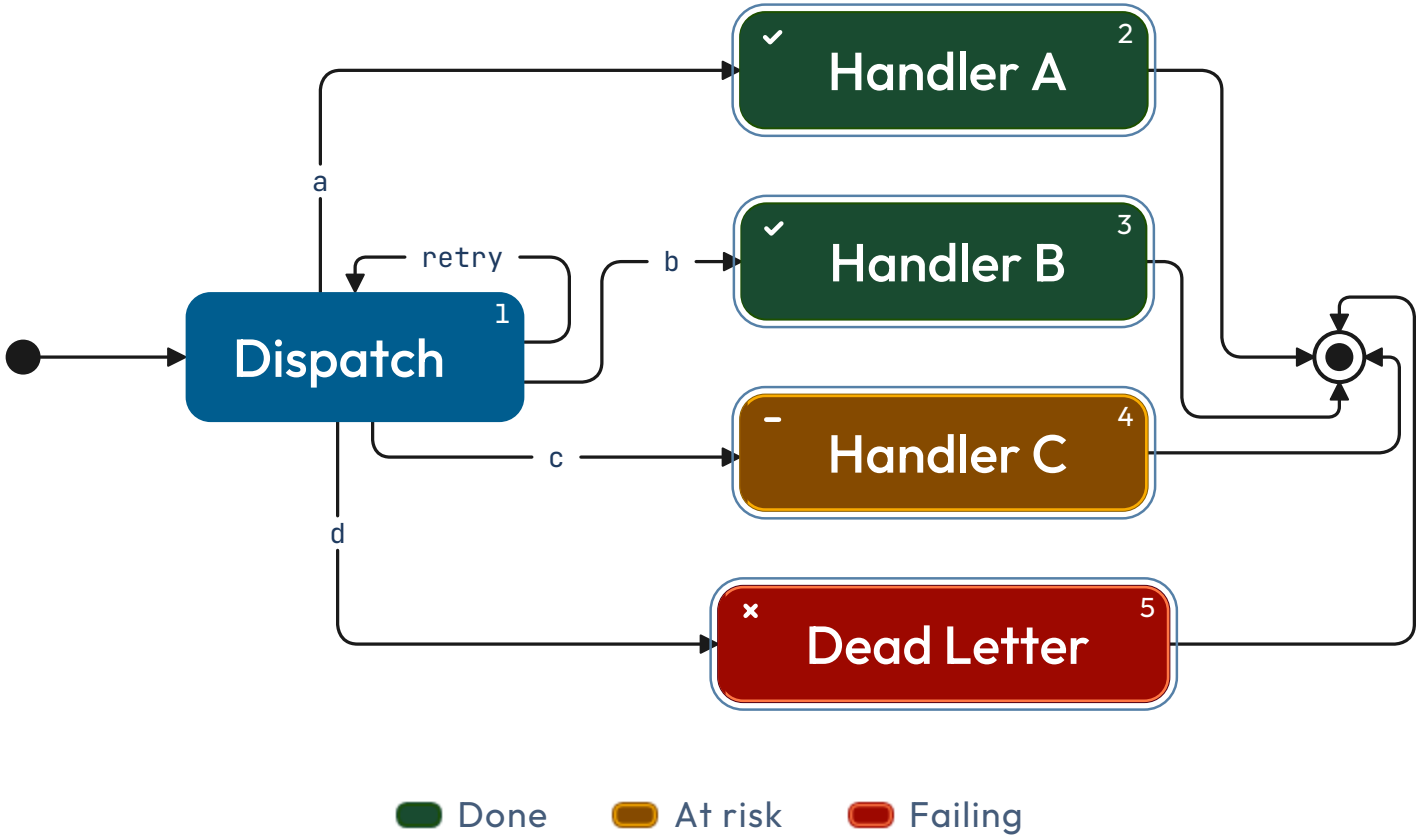

On track

# Ten-step pipeline.

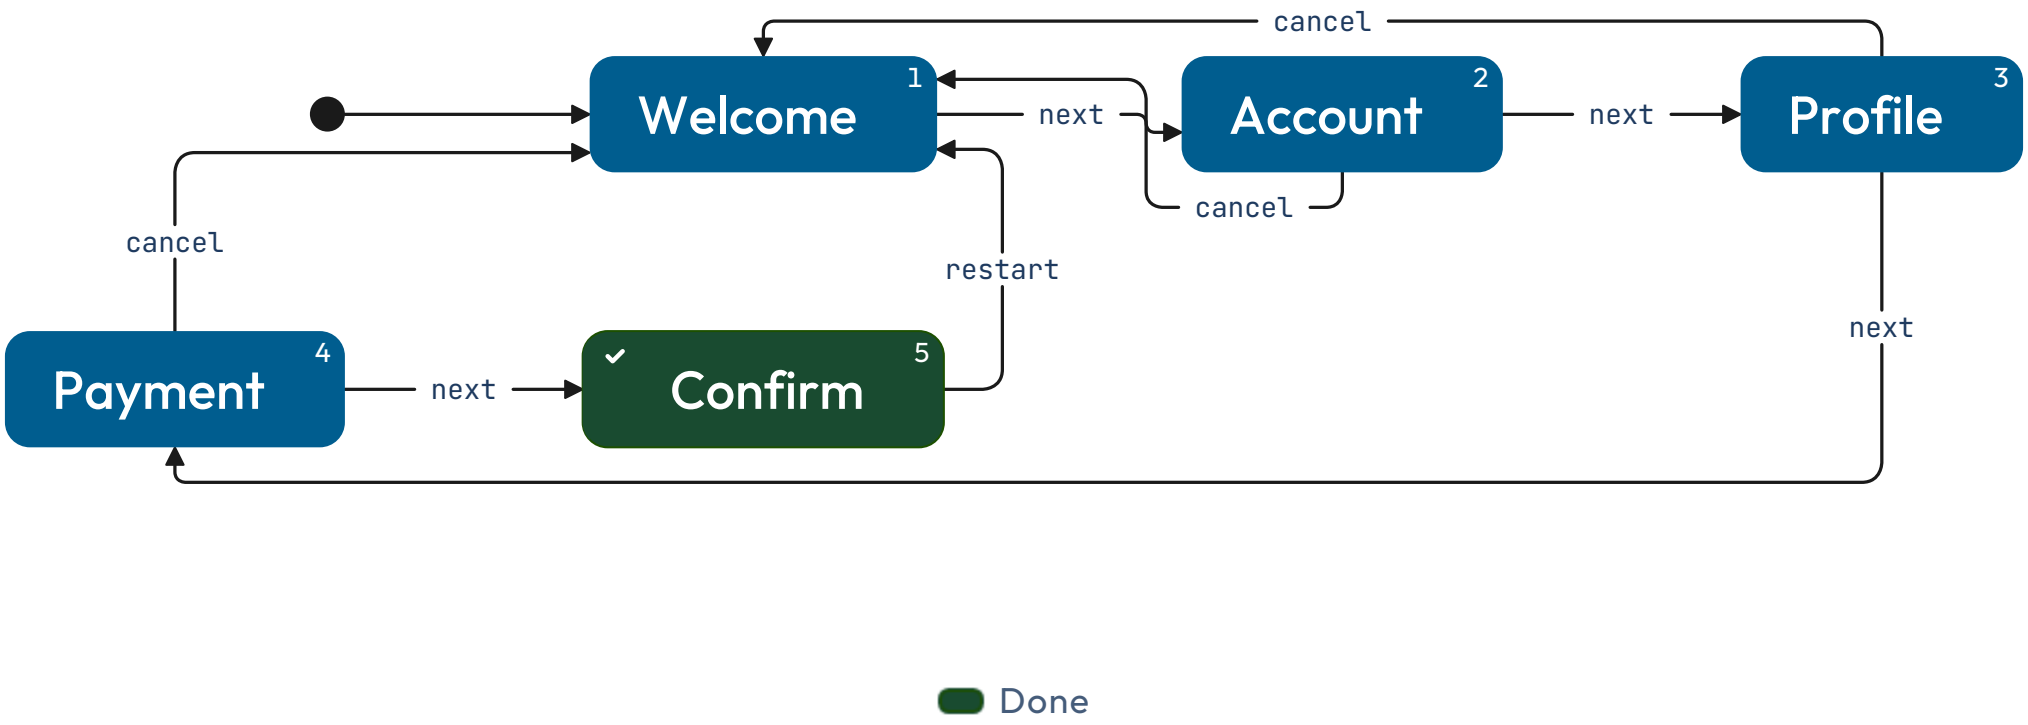

# Router with many exits.

5 — dense branching from one state

# Wizard with escape hatches.

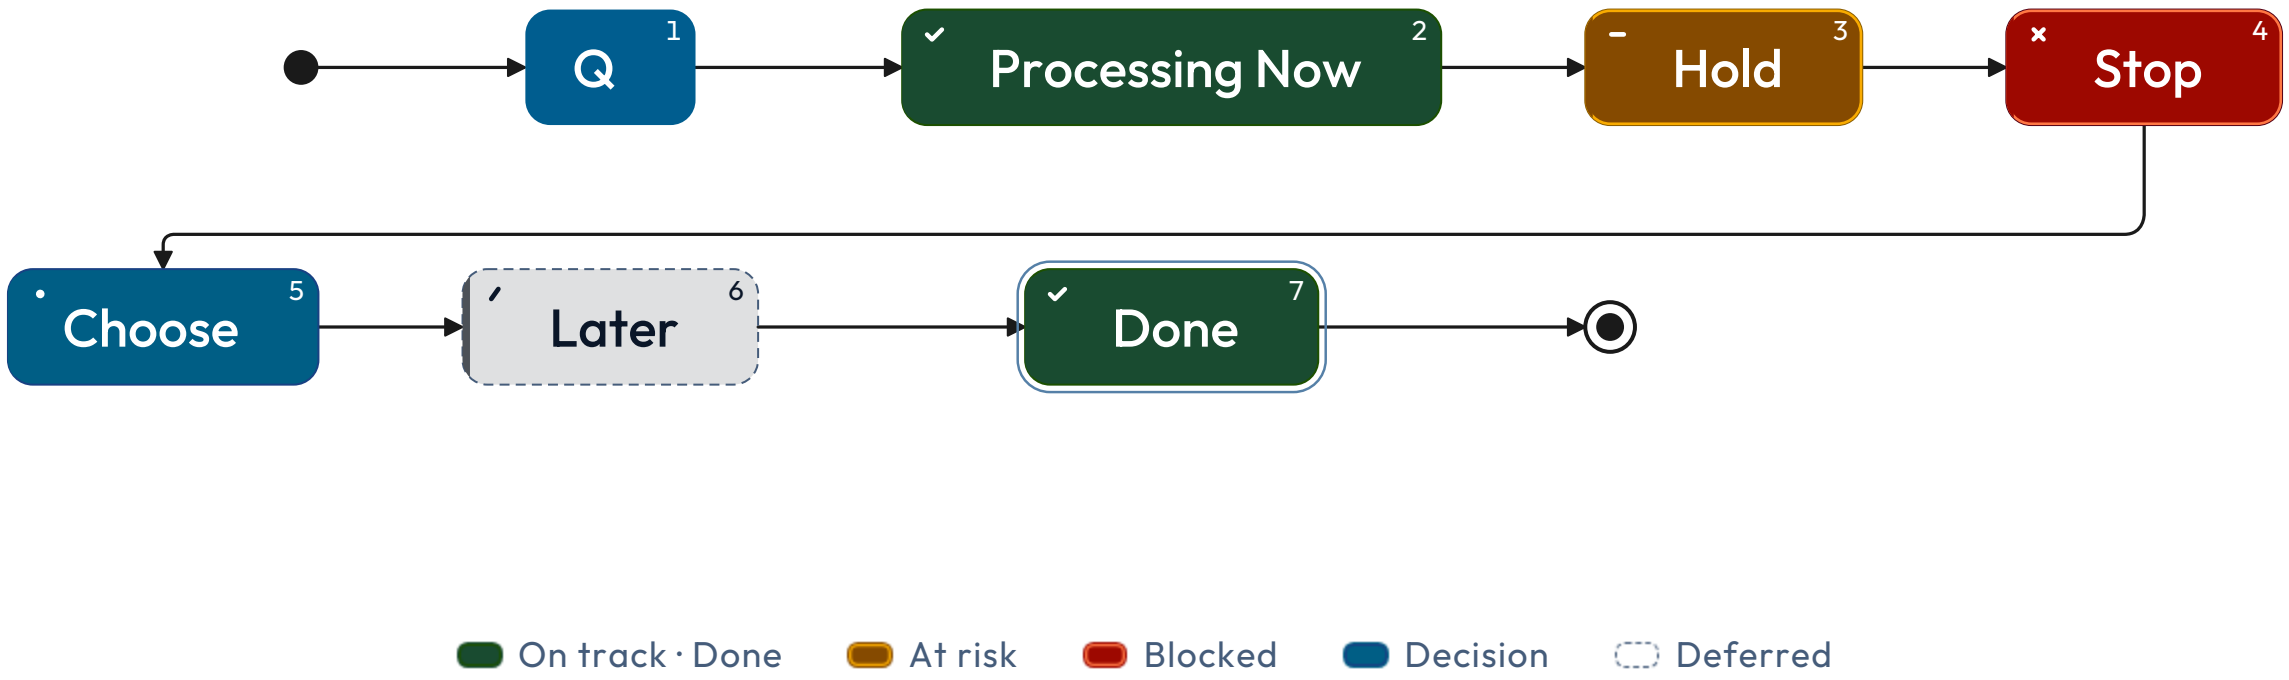

6 — heavy back-edges (everything returns to start)

# Degenerate: one state.

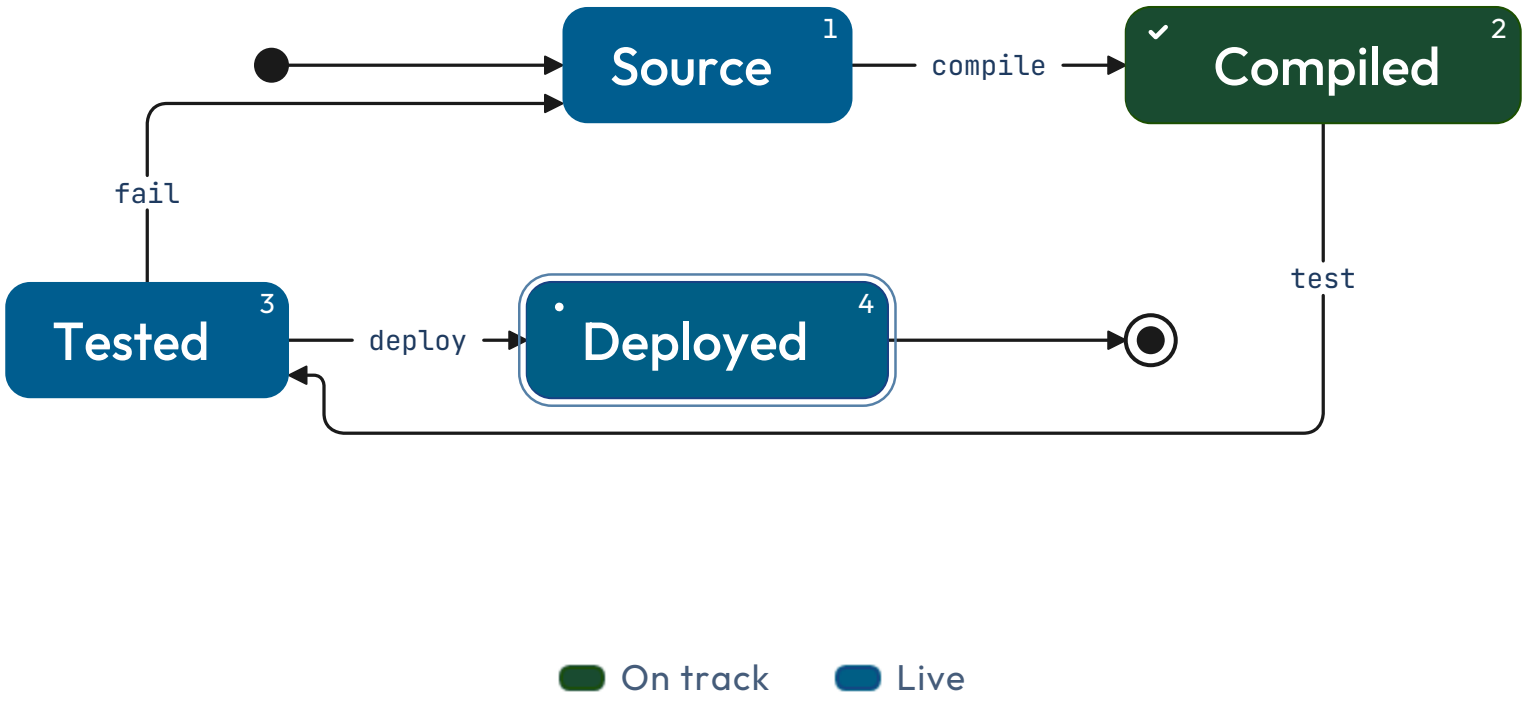

7 — single state, no transitions

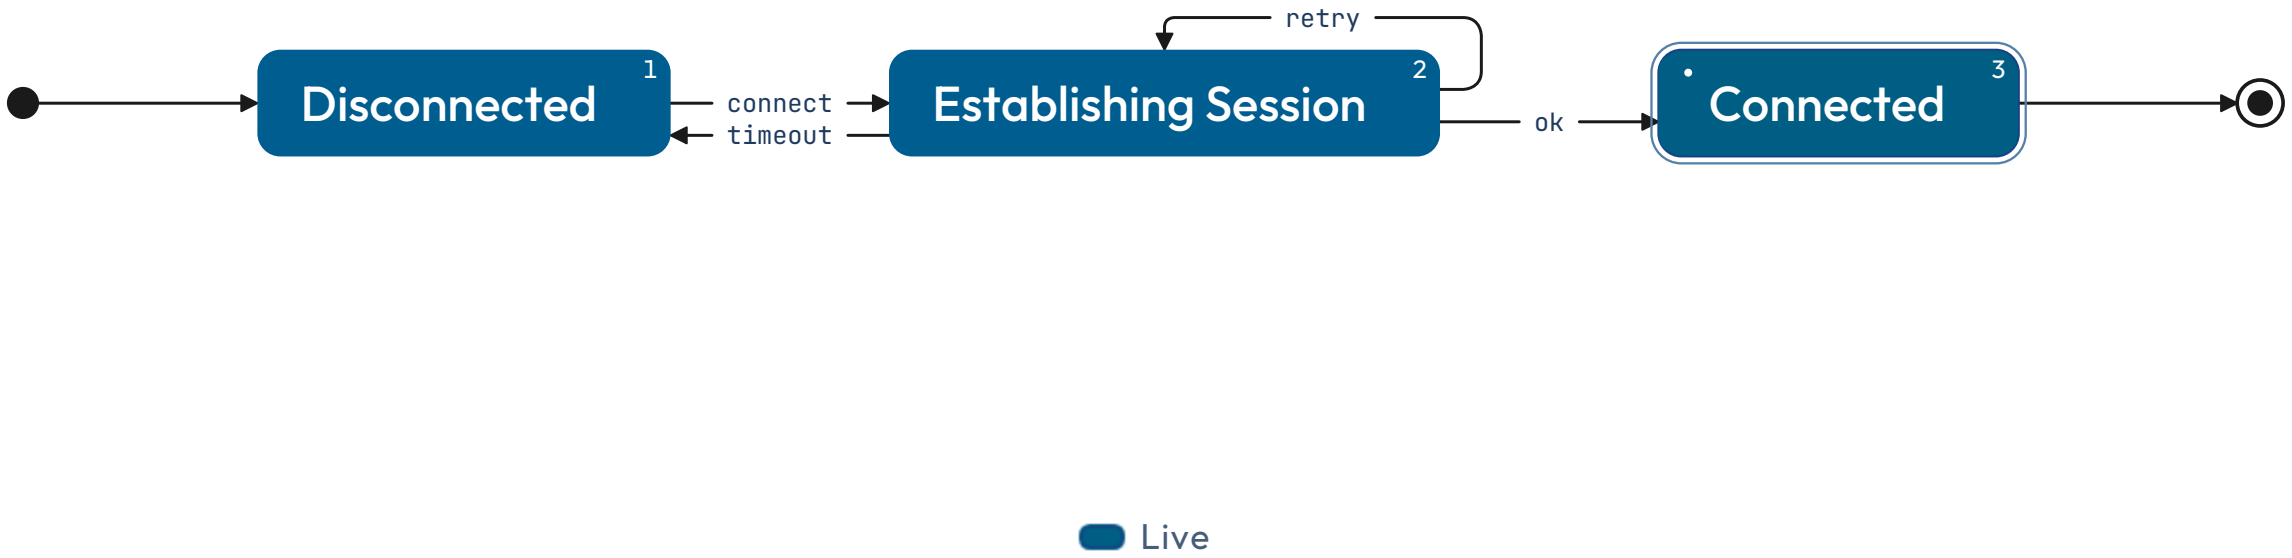

# Status palette across widths.

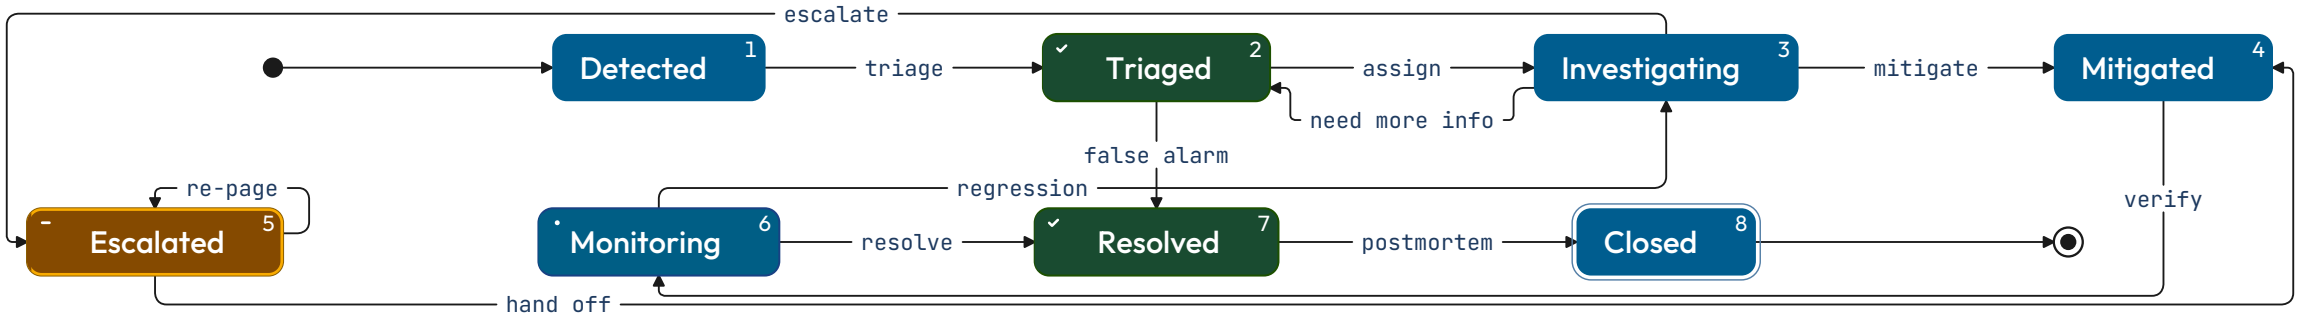

# Left-to-right pipeline.

# Connection (left-to-right).

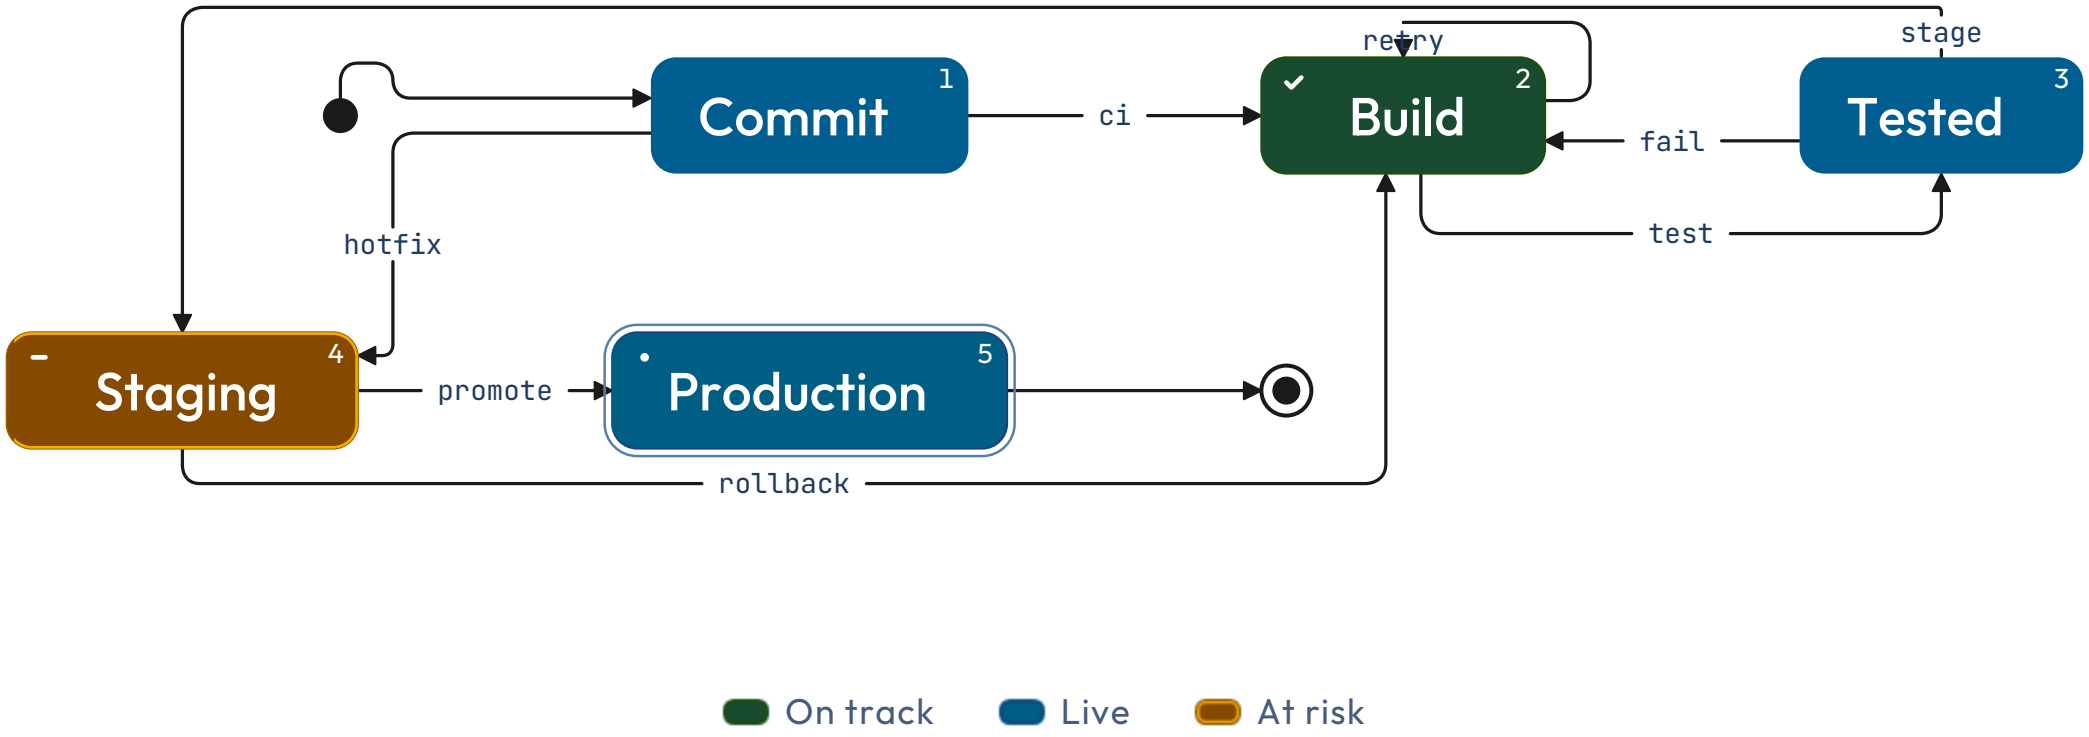

# Incident response.

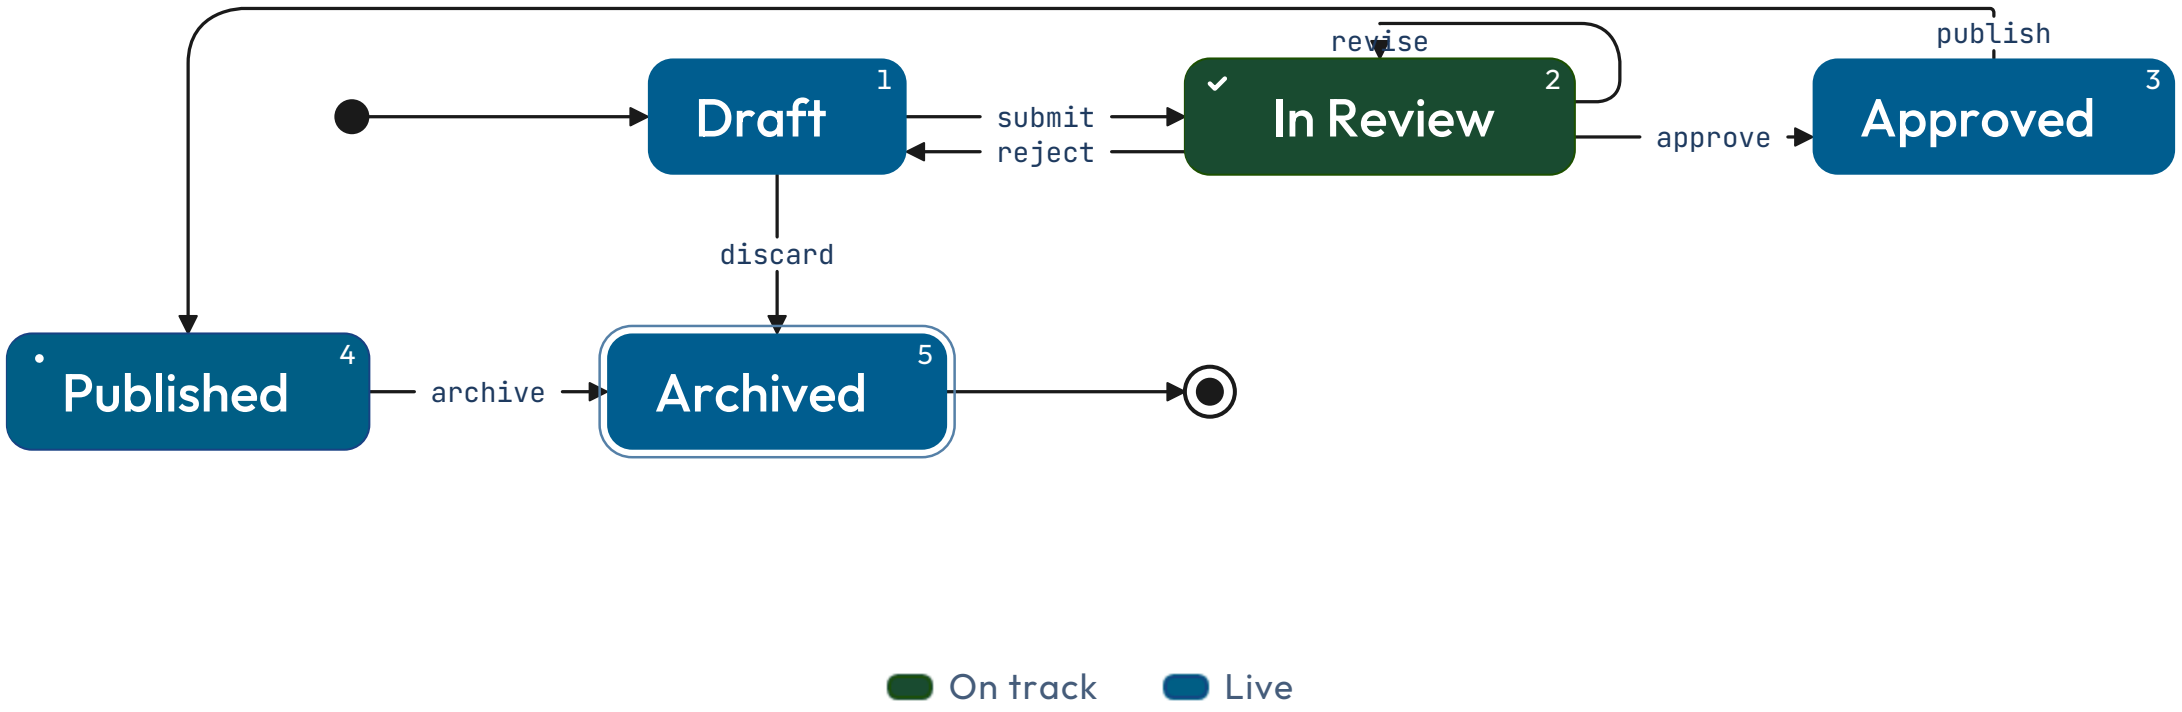

On track · Done  Live  At risk

# Build & release graph.

# Document approval (curved).

# Job runner (curved, lr).
