Universal token system · Phase 2

Borders and lines, named for the job.

The diagram-structural foregrounds move off the `--c-` junk drawer onto the `--diagram-` group — same pixels, clearer names.

Three structural foregrounds.

diagram-stroke

The border around any categorical band fill (was `--c-stroke`).

diagram-line

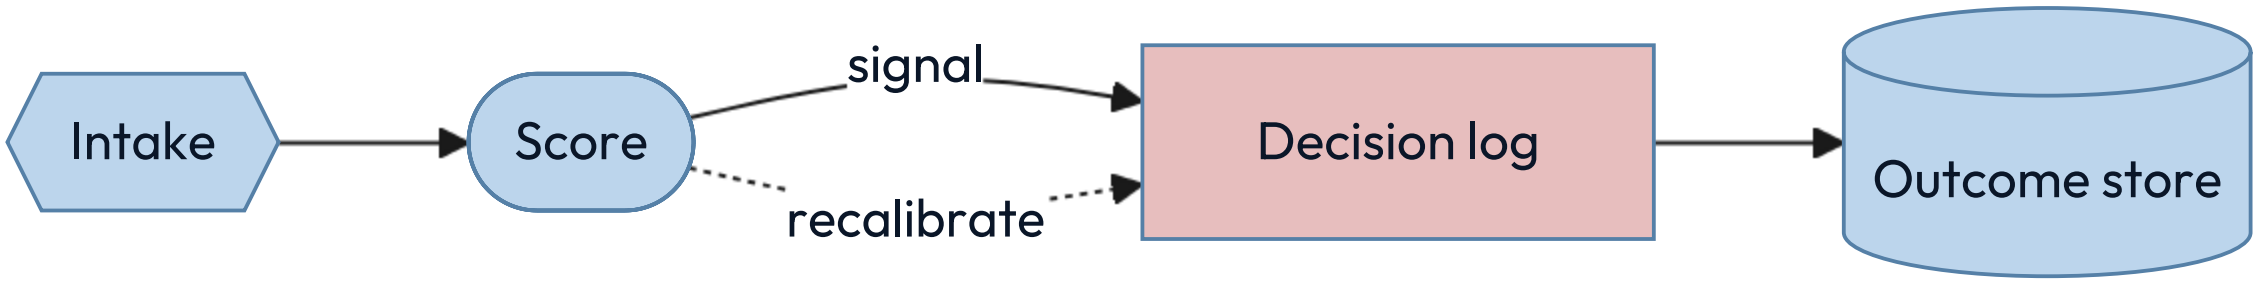

Edges, arrows, and connectors between nodes (was `--c-line`).

diagram-accent-warm

A secondary warm accent — radar's second curve (was `--c-accent-warm`).

01 · Flowchart

Node borders read stroke; edges read line.

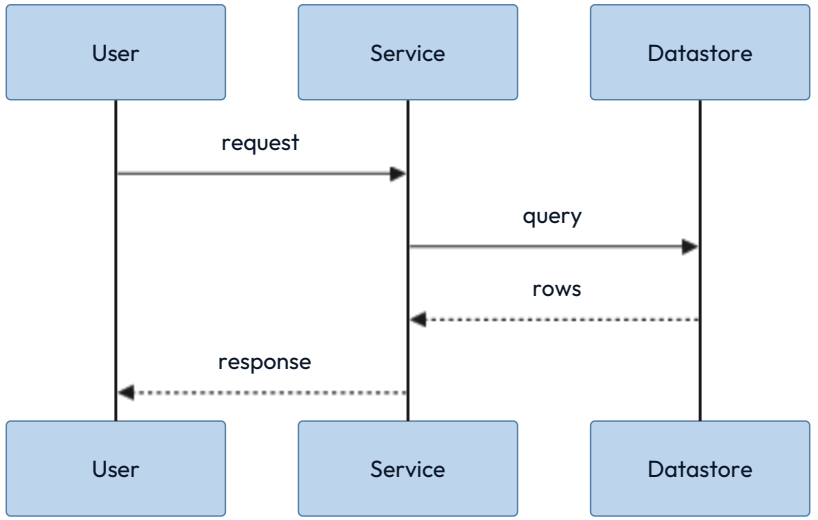

KEY INSIGHT

Every box border is `--diagram-stroke`; every arrow and label connector is `--diagram-line` — both painted via the upgraded offline bridge.

02 · Sequence

Actor frames and signal lines, same two tokens.

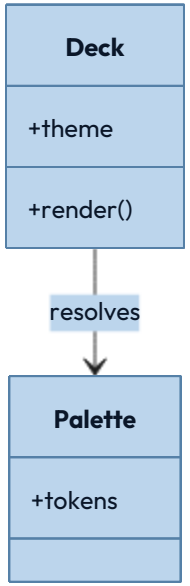

KEY INSIGHT

Actor boxes and the activation bars border on `--diagram-stroke`; the lifelines and signals draw on `--diagram-line`.

03 · Class

Boxes, dividers, and relations.

KEY INSIGHT

Class-box borders and member dividers are `--diagram-stroke`; the relation arrow is `--diagram-line`.

Phase 2 of 7 · see engineering/decisions/2026-06-11-universal-token-system.md

Structural foregrounds, off the junk drawer.
