New-hire training · Module 1

Handling your first ticket

How support works at Beacon — we'll tell you, show you, then you'll do it.

By the end of this hour, you'll resolve a real ticket on your own.

Welcome to the Beacon support team. This module follows a simple shape: we tell you how a ticket flows, we show you one worked end to end, and then you do one yourself with a coach watching. No theory you won't use today.

What this module covers.

01 How a ticket flows through Beacon

02 Watch one resolved end to end

03 Resolve one yourself

04 Where to get help

Tell: every ticket follows the same five-step path.

A ticket arrives, you triage it, you investigate, you resolve it, and you confirm with the customer. Every ticket — billing, bug, or how-to — follows this same path. Once it's muscle memory, the tool gets out of your way.

- The path is the same; only the investigation step changes by ticket type.
- The tool color-codes each step so you always know where you are.

Tell: the five steps of resolving a ticket.

STEP 01

Triage

Read the ticket, set the category and priority, and check for duplicates before anything else.

STEP 02

Acknowledge

Send the customer a first reply within the SLA so they know a human has it.

STEP 03

Investigate

Use the knowledge base and account history to find the cause; escalate if it's outside your scope.

STEP 04

Resolve

Apply the fix or the answer, and write it in plain language the customer can follow.

STEP 05

Confirm

Close only after the customer confirms it's solved, and tag the ticket for reporting.

Show: let's walk one real ticket end to end.

Here's a billing ticket that came in yesterday: "I was charged twice this month." We'll watch how a senior agent moved it through all five steps, and I'll narrate the why behind each choice as we go.

- Notice how she sets priority before she even opens the account.
- Watch where she escalates — and where she resolves it herself.

Show · the worked billing ticket

How the senior agent resolved the double-charge ticket.

00:00

Triaged as billing, high priority

✔ done

Categorized, checked for duplicates, flagged as a payment issue.

00:02

Acknowledged the customer

✔ done

First reply sent well inside the 15-minute SLA.

00:08

Found the cause in account history

✔ done

A retry on a failed charge had double-billed; confirmed in the payment log.

00:14

Refunded and confirmed

✔ done

Issued the refund, explained it plainly, and closed after the customer replied.

Do: your turn — work this ticket and check off each step.

- [ ] Triage the ticket and set priority — step 1
- [ ] Send the acknowledgment reply — step 2
- [ ] Investigate using the knowledge base — step 3
- [ ] Apply the fix and write the response — step 4
- [ ] Confirm with the customer and tag it — step 5

Where to get help when you're stuck.

The knowledge base

Searchable answers to the most common tickets — always check here first.

Your onboarding buddy

A senior agent paired with you for your first two weeks; ask anything.

The team channel

Post in #support-help for a fast answer when the buddy is heads-down.

Escalation path

Anything outside your scope goes to a lead with one click — never guess.

What good looks like on every ticket you close.

01

Inside SLA

Acknowledged and resolved within the time the customer was promised.

02

Plain language

The customer understands the answer without re-reading it.

03

Right category

Tagged accurately so the data tells us what's breaking.

04

Truly resolved

Closed only after the customer confirms — not when you stop typing.
