Workshop · half day · 13 June 2026

Q3 roadmap workshop

We have twenty ideas and room for six. Today we decide which six, together.

Today we turn twenty ideas into a ranked Q3 roadmap of six.

The backlog has twenty candidate initiatives and we can staff six next quarter. This workshop exists to make that cut together, with shared criteria, so the roadmap is something the whole team chose — not something handed down. By 5pm we leave with a ranked six.

How the afternoon runs.

01 Frame — the goal and the constraints

02 Activity one — score the ideas

03 Activity two — place them on the grid

04 Decide and assign next steps

Frame: the constraint is six slots, and they're real.

We have three squads for one quarter — six initiatives, no more. The job today isn't to argue everything is important; it's to choose. We'll use two shared criteria so the choice is consistent and we can explain it to the rest of the company.

- Six slots is fixed: adding a seventh means cutting a sixth.
- We score against impact and effort, nothing else.

The two criteria we score every idea against.

01

Customer impact

How much does this move a metric a customer would notice and pay for?

02

Effort to ship

How many squad-weeks to a shippable version, including the unglamorous parts?

03

Strategic fit

Does it build toward the platform direction, or pull sideways?

Activity one: the four idea clusters on the table.

Performance

Faster load times and a smaller app — broad impact, moderate effort.

Collaboration

Real-time editing and comments — high impact, high effort.

Admin controls

Roles, audit logs, SSO — unblocks enterprise, medium effort.

Polish

Dozens of small fixes — low individual impact, low effort each.

How activity one works: dot-vote, then discuss the outliers.

Each of you gets five dots to place across the twenty ideas on the wall. We tally, then we only discuss the ideas where scores disagree sharply — that's where the real conversation is. Agreement we accept; disagreement we explore.

- Vote silently first, so the loudest voice doesn't anchor the room.
- We timebox each outlier discussion to four minutes.

Activity two: place each cluster by impact and effort.

Low impact · Low effort.

Polish fixes — fill spare capacity

Low impact · High effort.

Legacy migrations — defer

High impact · Low effort.

Performance wins — admin controls

High impact · High effort.

Real-time collaboration — the flagship bet

How we get from the grid to a committed roadmap.

STEP 01

Pick the quick wins

Everything in the high-impact, low-effort cell goes in first; it's the cheapest value.

STEP 02

Choose one big bet

We commit to exactly one high-impact, high-effort flagship, not two.

STEP 03

Fill remaining slots

We use the leftover capacity on the next-best ideas until six slots are full.

STEP 04

Name what we cut

We write down what didn't make it and why, so the cut is honest and revisitable.

Next steps: who does what before Monday.

STEP 01

Write the roadmap

The facilitator turns today's six into a one-page roadmap by Friday.

STEP 02

Pressure-test effort

Each squad lead sizes their initiatives and flags any that doubled.

STEP 03

Share and confirm

We circulate to the wider team for a 48-hour objection window before it's locked.

Twenty ideas, six chosen together — that's the roadmap.
