Comparison · Ledger · Prose

table

The table component — a GFM pipe table with a row capacity, autosplit, and the portrait card reshape.

The table compares rows on consistent columns.

ROW	HOLDS	BUDGET
A label	One cell per column	Twelve words
Every row	The same column set	Twelve words
Six rows	The comfortable page	Twelve words

Eight rows is the table's hard ceiling.

ROW	READS	AT THE CEILING
One	First	Fresh attention
Two	Fast	Keep cells short
Three	Steady	Parallel phrasing
Four	Mid-page	The pivot row
Five	Slower	Trim adjectives
Six	The soft mark	Past comfort
Seven	Strained	Nearly done
Eight	Last	The hard stop

The table compares rows on consistent columns.

ROW	HOLDS	BUDGET
A label	One cell per column	Twelve words
Every row	The same column set	Twelve words
Six rows	The comfortable page	Twelve words

Six rows	The comfortable page	Twelve words

When NOT to reach for table.

Cells full of prose

Long sentences in a cell wrap awkwardly and force the column wider. Move to `verdict-grid` for criteria with body text, or `cards-stack` for full prose rows.

More than 6 rows

Past 6 rows the table crowds the slide. Split across two slides or summarize the rows that don't differentiate.

When NOT to reach for table.

A table that only supports the prose around it

Then it does not need this class at all — write the pipe table on a `content` or un-classed slide and the universal treatment styles it. The component is for a table that owns the slide.

Reaching for it when a specialist fits better

Mostly pass/fail badges is `obligation-matrix` or `verdict-grid`; term/definition pairs are `glossary`; a dated plan is `roadmap`.

Related components

See also.

`compare-prose` — exactly two options with prose bodies

`verdict-grid` — options scored against criteria with pass/partial/fail badges

`obligation-matrix` — many regimes compared against shared obligations

`cards-stack` — each row needs full-prose breathing room rather than a tabular cell
