When NOT to reach for statute-stack.

More than four rows

The three-column rail collapses past four jurisdictions. For longer registers move to `lane` (table form) or split across two statute-stack slides by topic.

Citation without obligation

Without the headline obligation sentence, the layout reads as a citation list. Use list-tabular spec when only the citation matters.

Mixed entry shapes

Every row needs the same three parts — citation, obligation, status. A row missing the status pill or with prose instead of a citation breaks the visual contract.

`list-tabular` — the rows are citation-only references, no obligation prose

`obligation-matrix` — obligations cross-tab against actors or controls

`authority-chain` — the rows are a delegation lineage, not parallel jurisdictions

`table` — the comparison is across criteria, not jurisdictions
