Statement · Canvas · Prose

big-number

Single oversized number as the focal claim.

big-number · one number, the whole canvas

1

claim per slide is what this layout enforces — the number argues, the caption stays to a line.

big-number · stress — the longest number that still lands

$1,248,500,000

ten digits with separators, scaled down to fit; past this width the claim stops reading at the back of the room.

big-number · one number, the whole canvas

1

claim per slide is what this layout enforces — the number argues, the caption stays to a line.

big-number · one number, the whole canvas

claim per slide is what this layout enforces — the number argues, the caption stays to a line.

When NOT to reach for big-number.

Multiple metrics on one slide

Two big numbers on one canvas dilute both. Use `stats` for a row of three metrics or `kpi` for a grid of four; reserve big-number for genuinely solo claims.

Caption longer than one line

If the caption needs a sentence to explain, the number isn't carrying the slide. Either trim the number's claim or move to `content` where prose has room.

Decorative numbers without an argument

"99.99% uptime" by itself is a boast, not a claim. Big-number works when the number is the answer to a question the audience came in with.

Related components

See also.

`stats` — row of 2-3 metrics, comparable visual weight

`kpi` — grid of 4-6 metrics with status indicators

`split-panel` — the metric needs a paragraph of context alongside it

`content` — the argument is mostly prose with a number embedded
