timeline-list

Date-stamped event list rendered as a horizontal spine — a dot per event with its date pill above and title, status pill, and body stacked below.

chart · timeline-list

The timeline pins events to their dates.

Four milestones show the shape; the date chips carry the when.

Q1

The first milestone

One clause says what changed here.

Q2

The second, marked

• decision

A tag names the milestone's kind.

Q3

The third milestone

Sixteen words is each entry's budget.

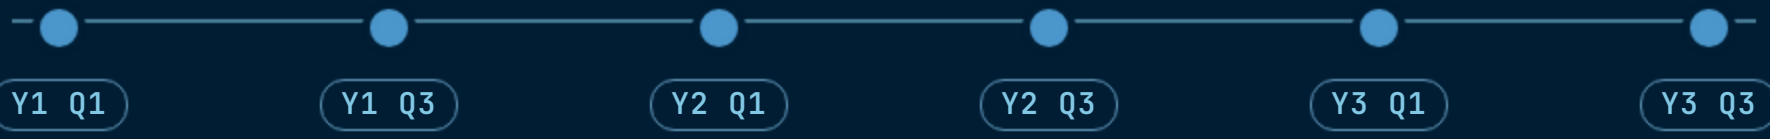

Q4

The fourth milestone

Four to six entries reads best.

timeline-list · stress

Six milestones is the line's honest length.

Y1 Q1

The opening milestone

An entry at the hard budget carries one full clause and its consequence.

Y1 Q3

The second marker

Twenty-four words is the ceiling; spend them on what changed, not context.

Y2 Q1

The midpoint

The middle of a timeline is where attention sags — anchor it.

Y2 Q3

The fourth marker

Entries shorten as the line descends.

Y3 Q1

The fifth marker

The soft ceiling passed one entry ago.

Y3 Q3

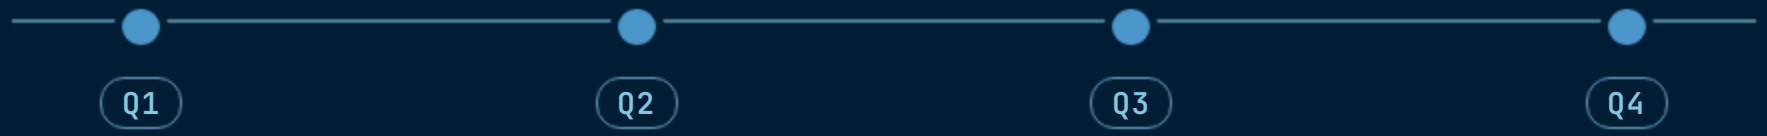

The last marker

Six is the stop; a seventh becomes a gantt.

When NOT to reach for timeline-list.

Date-less steps

No calendar dates? You have a sequence, not a timeline. Use `list-steps` for an ordered list or `journey` for stage-by-stage progress.

Date-range bars

If each milestone needs a start and end on a shared axis, it's a Gantt chart. Use `gantt` — bar geometry conveys the durations a pill cannot.

Status pills as decoration

A status pill is a verdict; only the shared ten count. Anything else draws one in the info color, and reads as deliberate.

`regulatory-update` — the dated entries are regulatory changes and every row carries a citation

`gantt` — milestones occupy date ranges, not single moments

`list-steps` — the sequence has no dates, just an order

`journey` — stage-by-stage progress without calendar dates

`roadmap` — the timeline is forward-looking and bucketed by horizon

`progress` — the events are parallel workstreams with completion percentages
