Evidence · Canvas · Series

tower

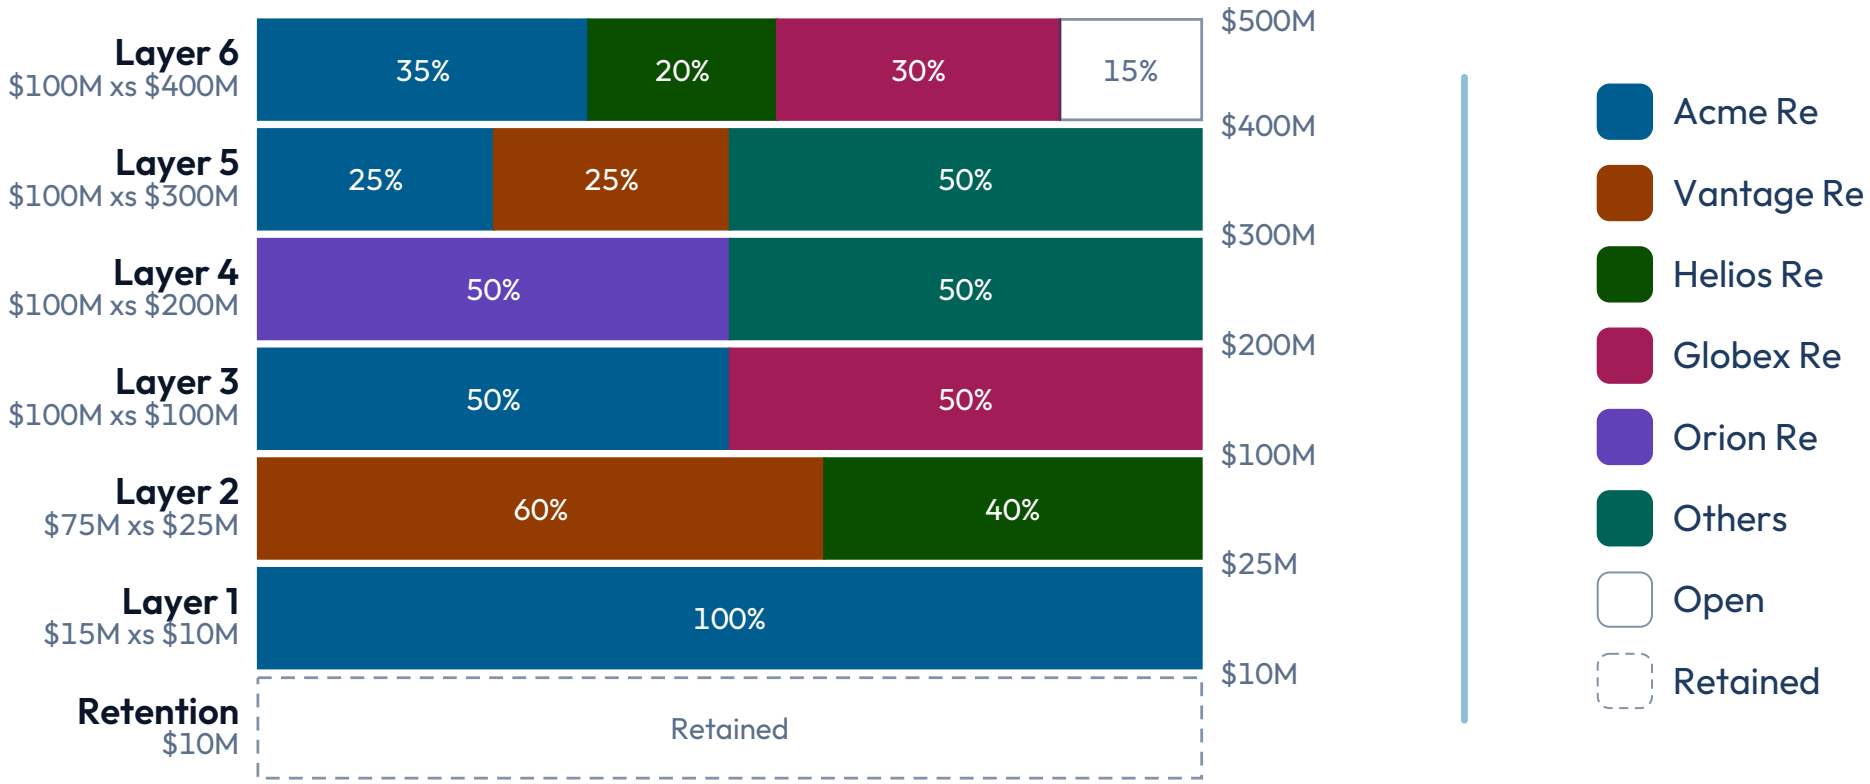

A reinsurance program as stacked layers, each written as its limit in excess of its attachment and split across the reinsurers who took a share of it.

Property catastrophe program · 2027

Six reinsurers carry $310M above a $50M retention.

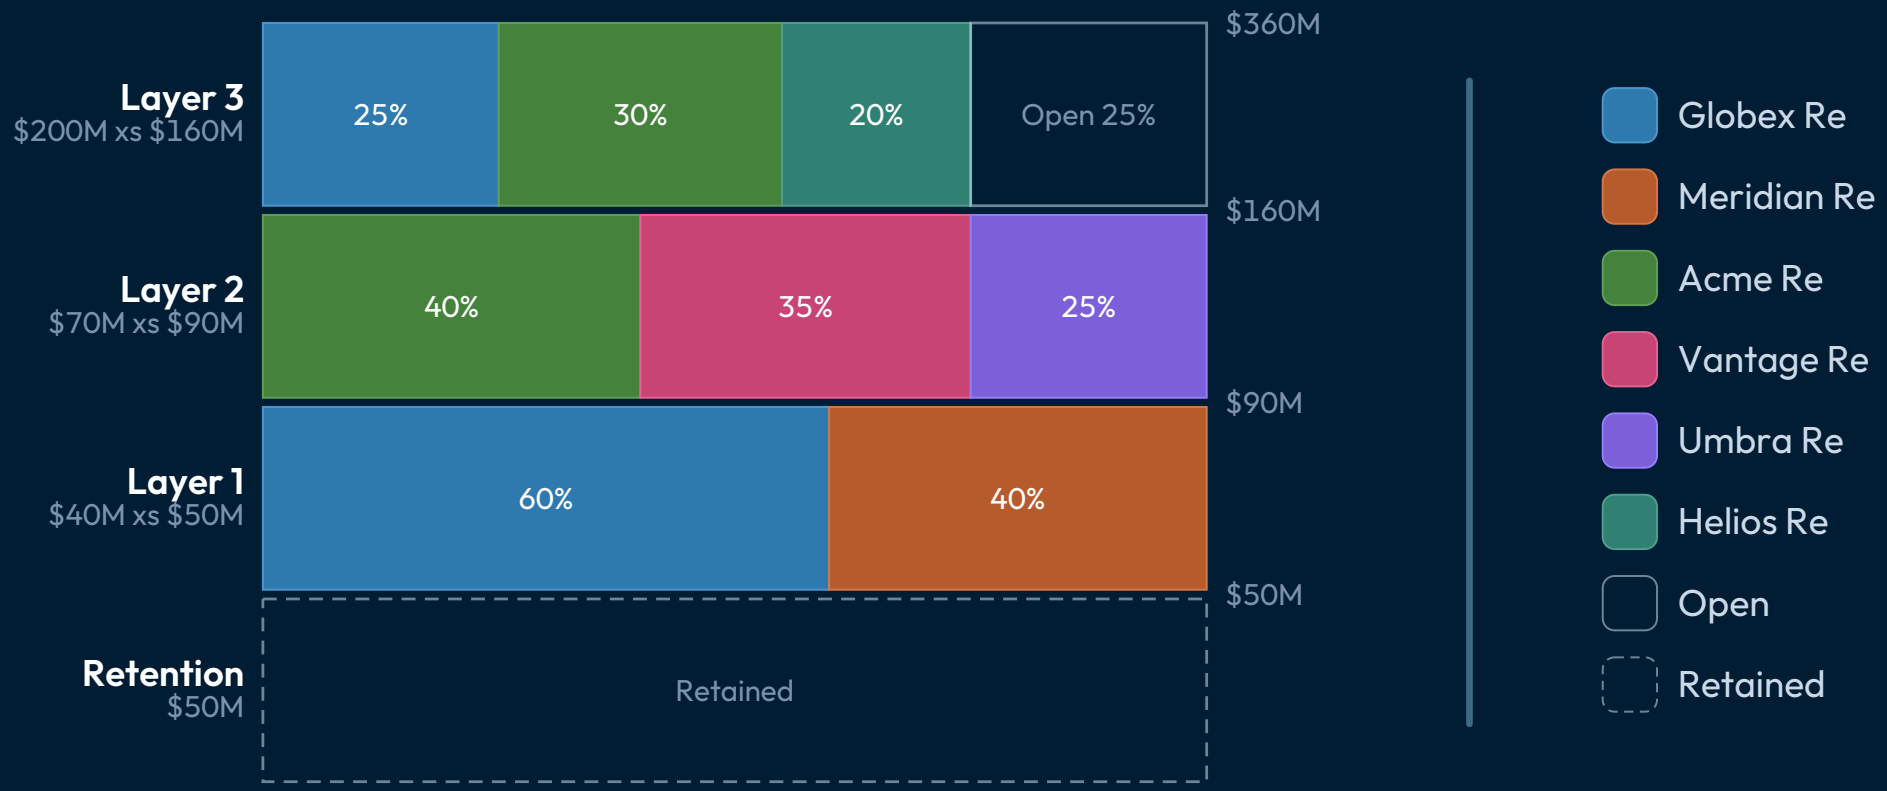

A six-layer casualty tower, 85% placed at the top.

Stress test · tower — Six layers, eight reinsurers (two fold into Others), one layer part-placed.

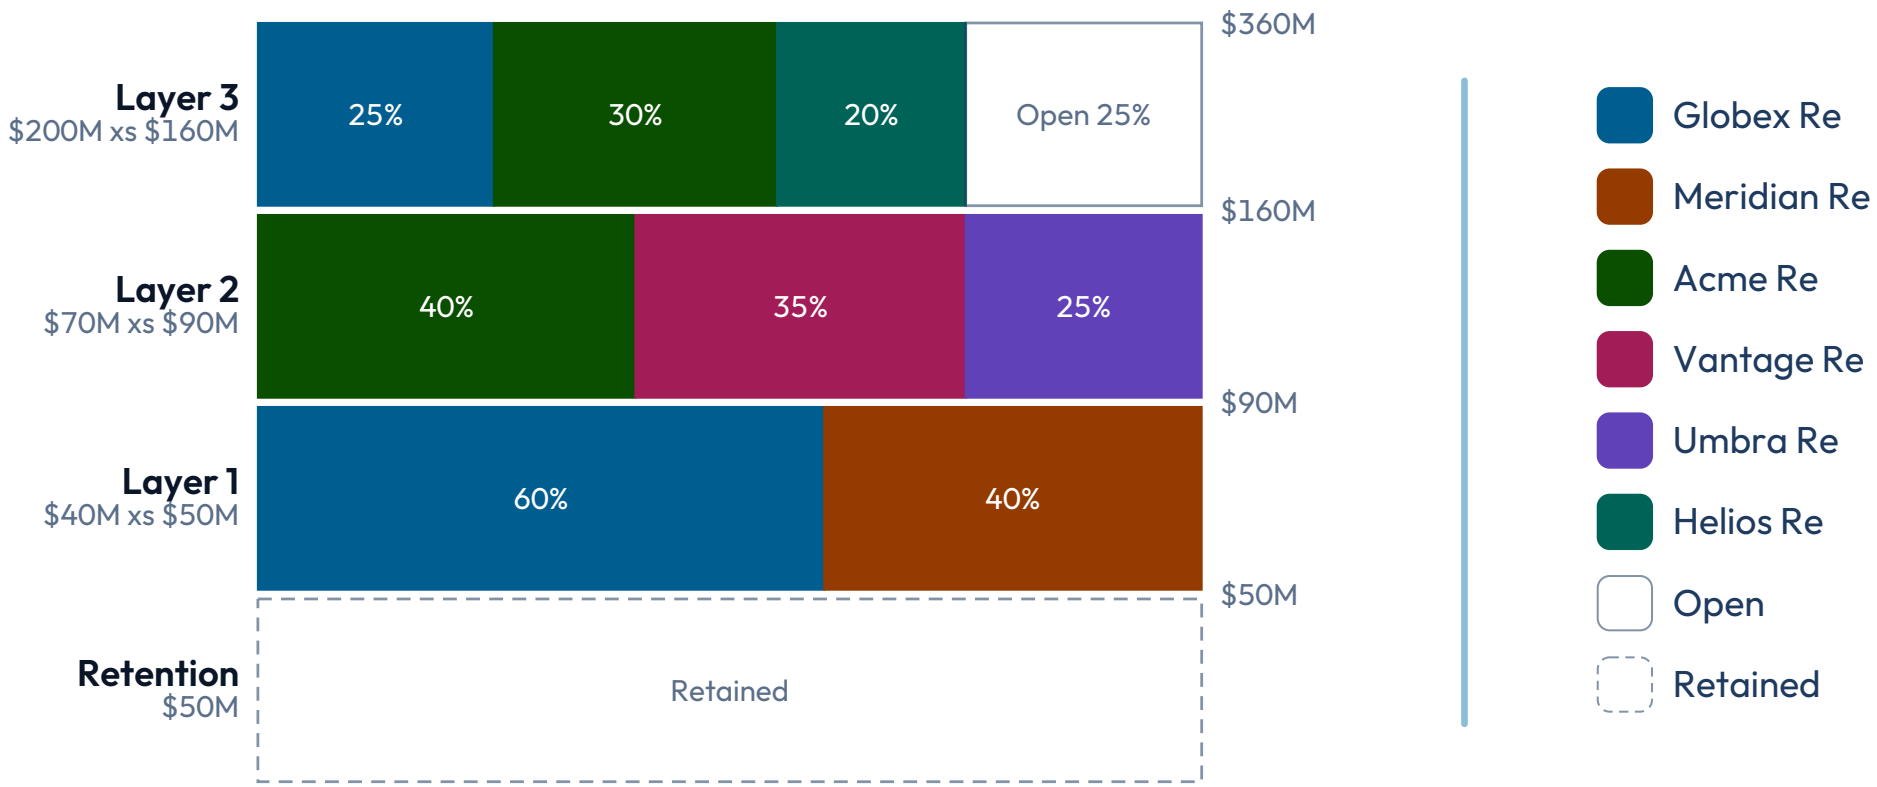

Property catastrophe program · 2027

Six reinsurers carry $310M above a $50M retention.

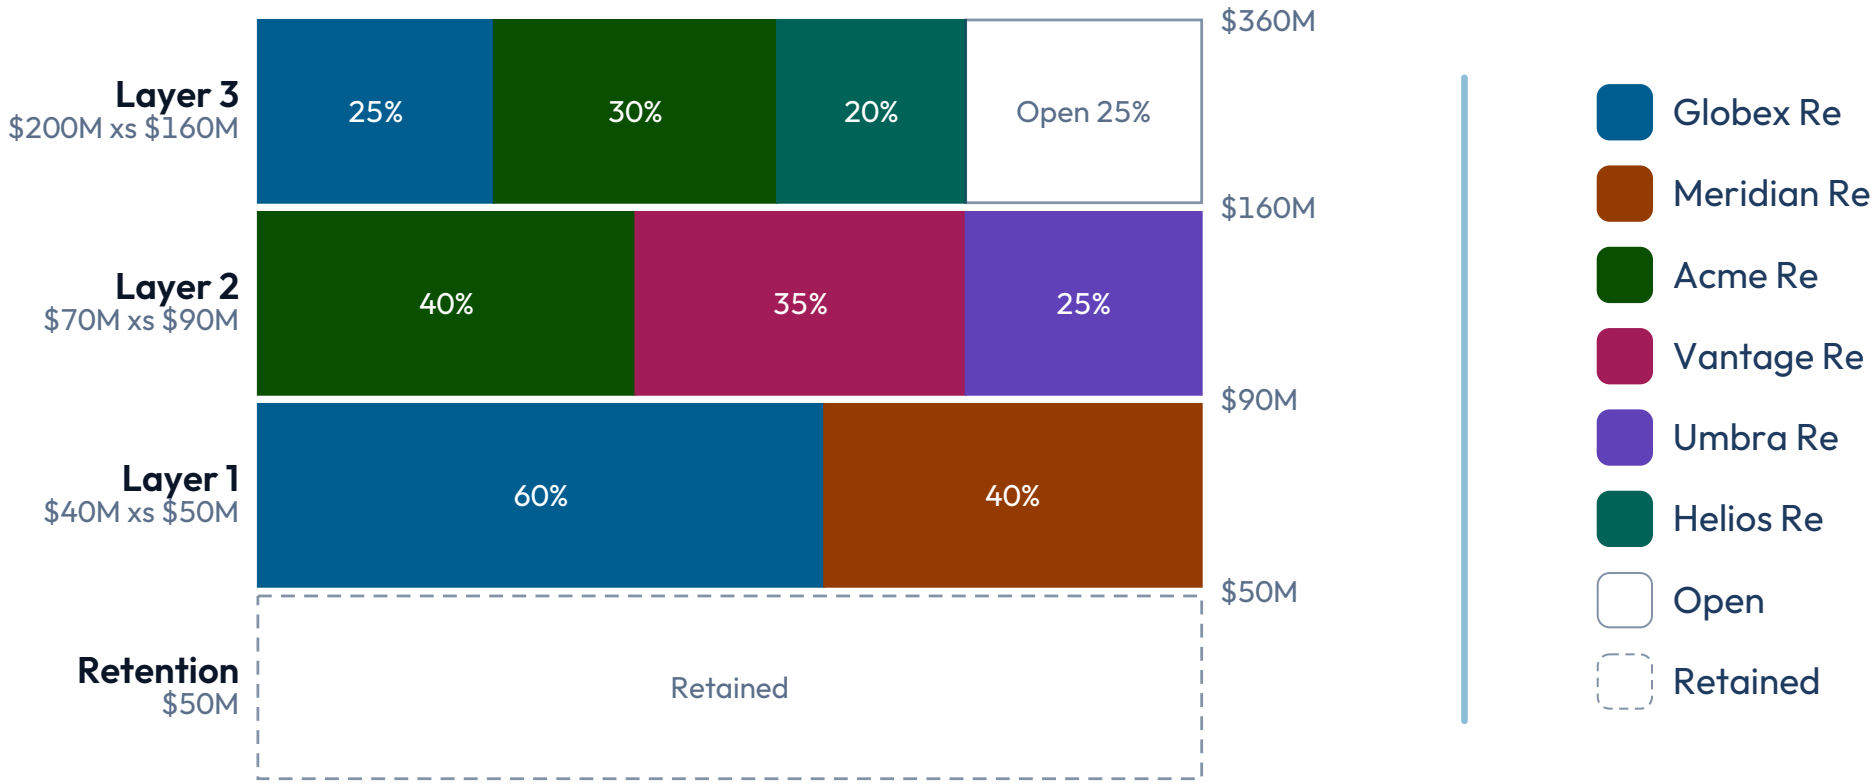

Property catastrophe program · 2027

Six reinsurers carry $310M above a $50M retention.

Property catastrophe program · 2027

Six reinsurers carry $310M above a $50M retention.

When NOT to reach for tower.

Reading the height as the size

The layers are drawn at equal height on purpose, so a $40M layer and a $200M layer look the same size. When the audience needs to SEE the size difference, show the limits as a `bar` chart instead.

Shares that are dollars

A share is a percentage of its layer. Write the reinsurer's line as `30%`, not `$12M`: a dollar figure reads as 12 million percent.
