Palette audit

13 themes · every token tier

every token tier, every theme

Each slide hardcodes the resolved hex values for one palette so the swatches show *that* palette regardless of the deck's active theme.

Before you copy anything · 2026-07-16

The `--cat-*` proposals here are superseded.

The chart-palette scoring on the slides that follow is unaffected.

KEY INSIGHT

Superseded by #1022. These values were scored under the retired "pale L≈87 / deep L≈32, fixed non-flipping ink" model. The shipped cycle is the **three-layer contrast contract** (`engineering/decisions/2026-07-15-categorical-token-contract.md`, gated by `checkCatContrast`). **Do not copy these `--cat-*` values into a new theme** — copy a shipped three-layer block (indaco / cuoio) and re-hue it.

Palette proposals

13 themes · every token tier

5 strategies × 13 themes = 65 candidates

Each slide: 12 paired slots (hue shared between light + dark variants).
Light = pale fill + dark text contract (AA target 4.5:1 on theme text-heading).
Dark = deep fill + white text contract (AA target 4.5:1 on white).

Scores below each header report AA-text pass count, graphical-on-canvas pass count, min adjacency hue spread among the first 6 (higher = first 6 more distinct), brand affinity (lower = closer to brand hue), and hue coverage (higher = wider palette).

Palette proposals

13 themes · every token tier

ranked top-5 per theme · 13 themes · 65 candidates

Each slide carries 12 paired slots, with the hue shared between light and dark variants.

How a candidate is scored

Composite score, 0–100.

- AA-text light pass — 30 pts
- AA-text dark pass — 30 pts
- Graphical dark on bg — 15 pts
- Adjacency 1-6 ΔH — 15 pts (60°+ = full credit)
- Brand affinity — 5 pts (peaked at 75° — anchored but diverse)
- Hue coverage — 5 pts (300°+ = full credit)

Light is a pale fill with dark text (AA 4.5:1 on the theme's text-heading); dark is a deep fill with white text (AA 4.5:1 on white). Slides sort by score within each theme.
