

PANES • RADAR SIZING

A radar lays out for its pane

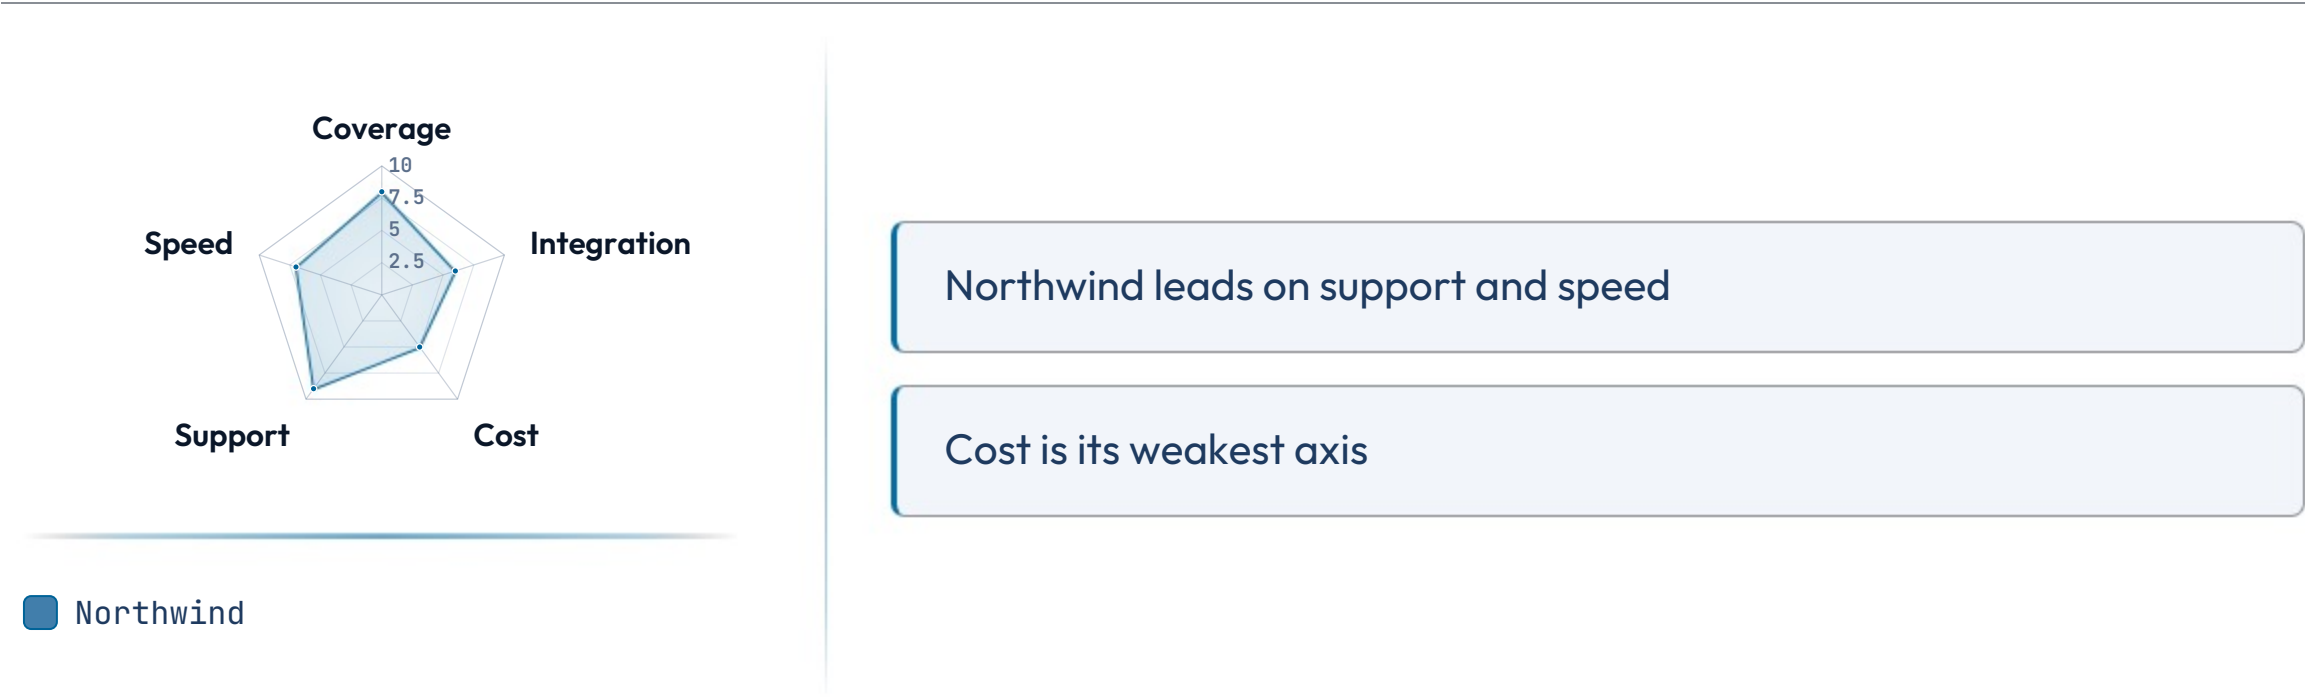

VENDOR REVIEW · SCALE 0-10

Northwind leads on support; Contoso on cost.

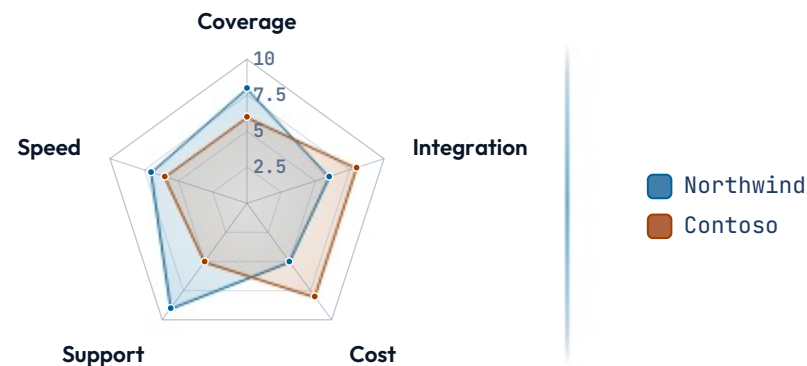

– Rim labels 11.4px on this slide; 14px on a slide with no note.

In a narrow pane the key drops below the web.

— Rim labels 13.9px, up from 6.3px (its 5.1px ticks were under the type floor), and the web grew too.

A half-width pane grows its type as far as the web allows.

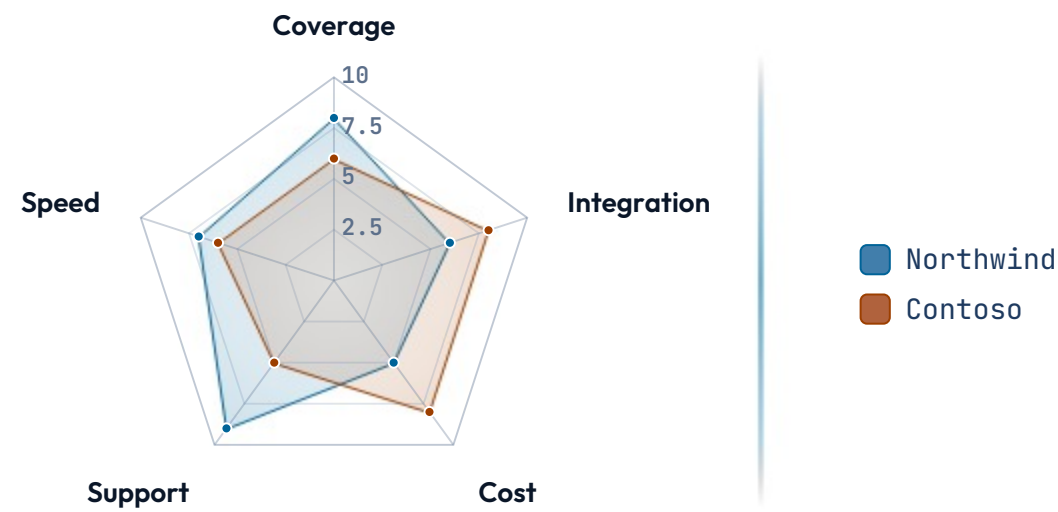

Northwind wins on support and speed

Contoso wins on cost and integration

— Rim labels 11.3px, up from 9.0px, for 16% of the web. A pane's web may give up to 25%.

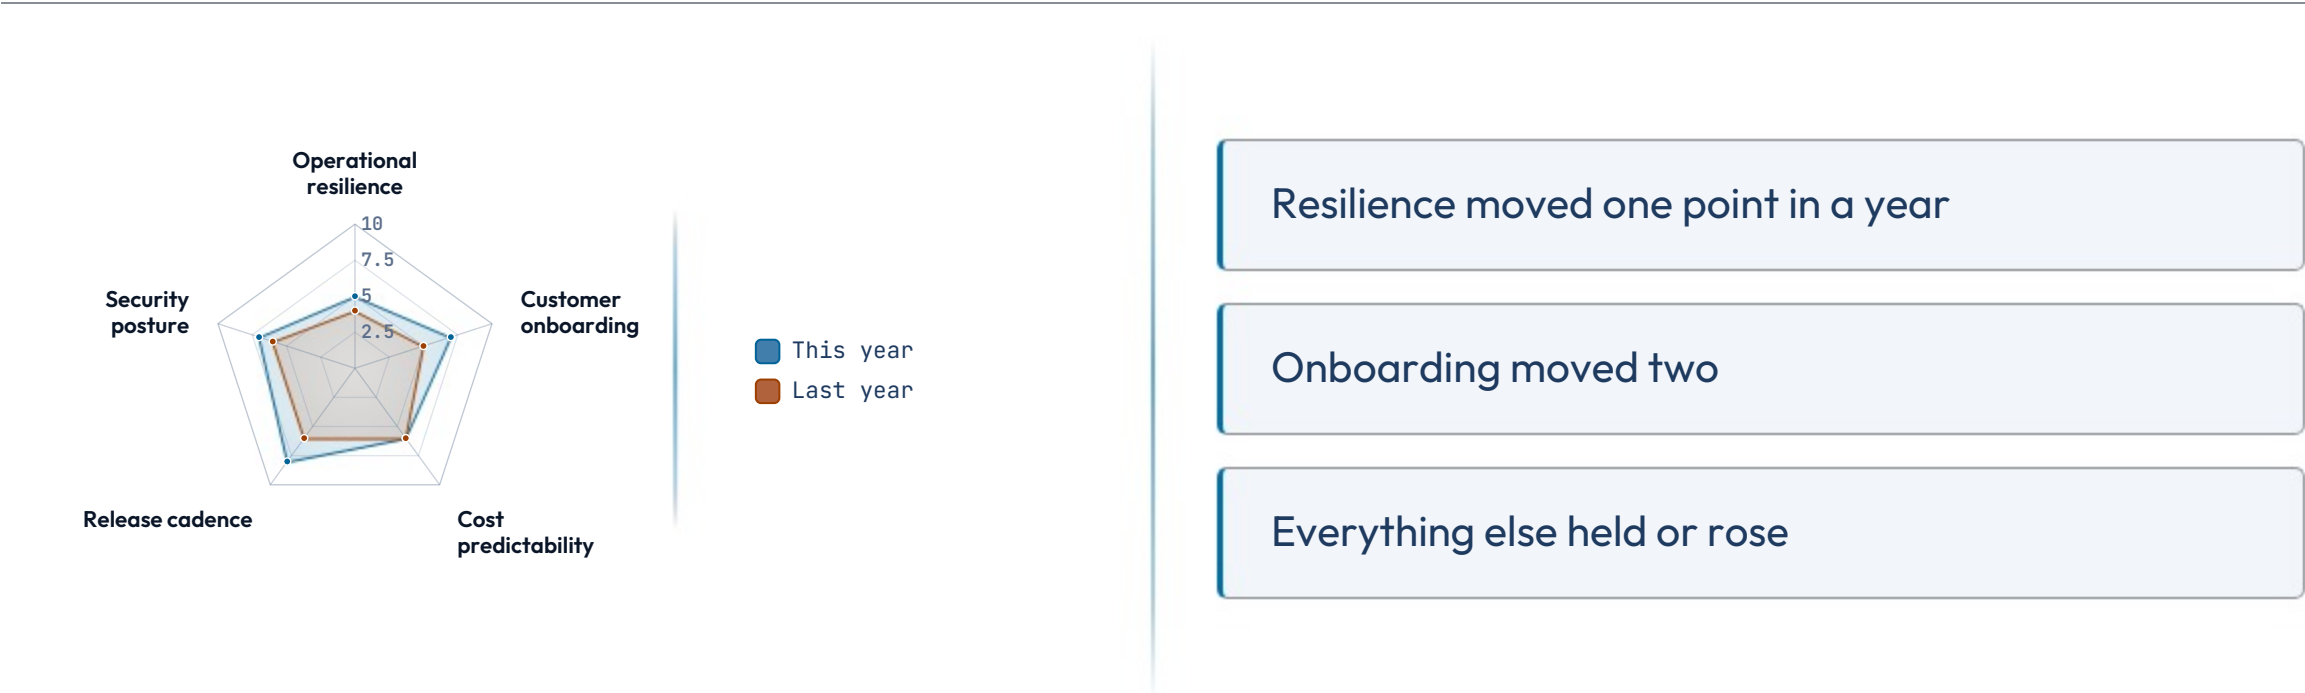

A wide pane reads at the slide's size.

- Support decides it
- Cost is the tie-break

— Rim labels 14.0px, up from 11.0px, for 3% of the web.

Resilience is the axis that still lags.

— Rim labels 11.3px, up from 9.0px. Long names wrap at the size the page paints, so none runs into the key.

The rim labels are
what a radar is read by
