

3 COMPONENTS

progression

Progression — ordered movement through stages or time.

Nothing is spent — only moved.

Evaporation

The sun lifts water from ocean and leaf into vapor.

Condensation

Vapor cools into cloud, a reservoir held aloft.

Precipitation

Rain and snow return the water to the ground.

Collection

Rivers gather it back to the sea, and it begins again.

Criteria are gates: clear them in order.

01

State the bar

Each criterion is a pass-or-fail line, not a preference.

02

Order by veto power

The criterion most likely to kill goes first.

03

Keep the list short

Three gates decide; six gates stall.

Steps promise an order and keep it.

STEP 01

Name the step

A verb-first title and
one clause of body.

STEP 02

Keep steps parallel

Same shape every
step, or sequence
breaks.

STEP 03

Number honestly

Order is the promise
this layout makes.

STEP 04

Stop at five

Six fits; seven is two
slides.
