

DIAGRAM • MINDMAP • CATEGORICAL

One branch, one color

Every node in a mindmap branch now takes that branch's color, whatever its shape and however many branches the map has. Each branch line matches its boxes, and the root has a color of its own.

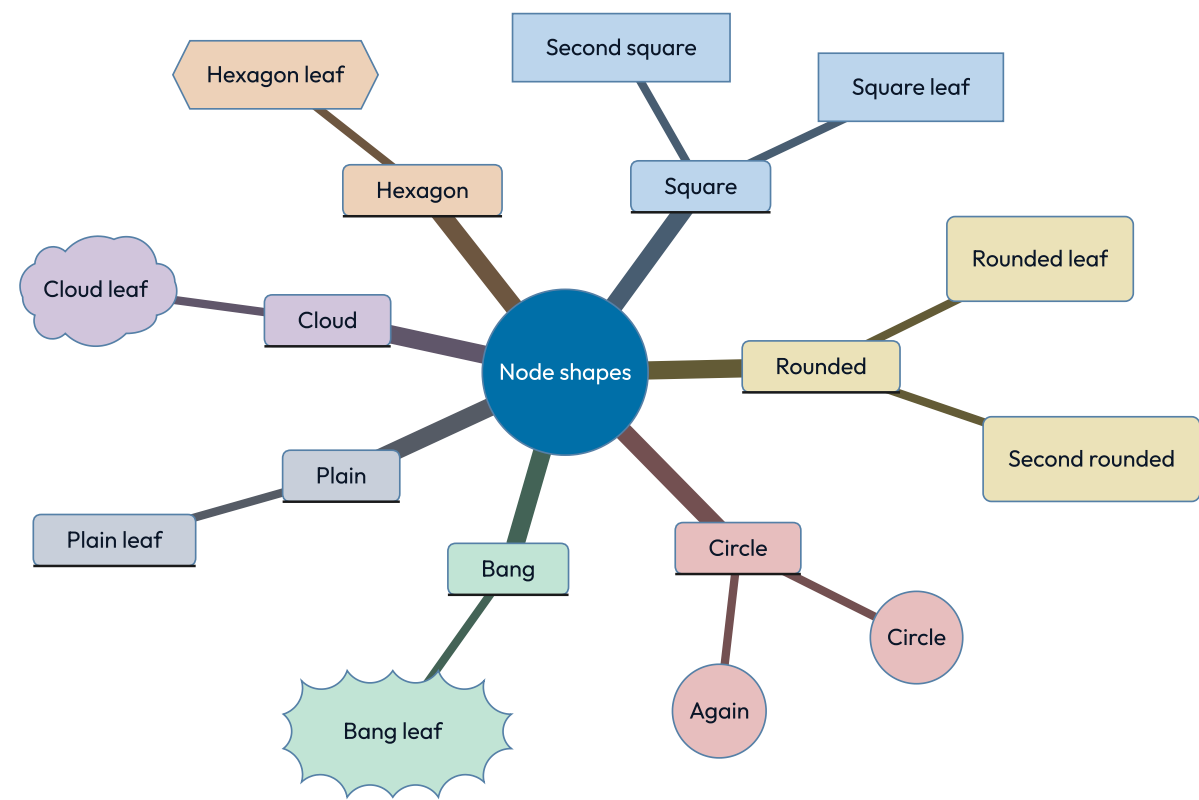

Six branches, six colors, and a root that stands apart.

On a dark slide each line lightens, and keeps its branch's hue.

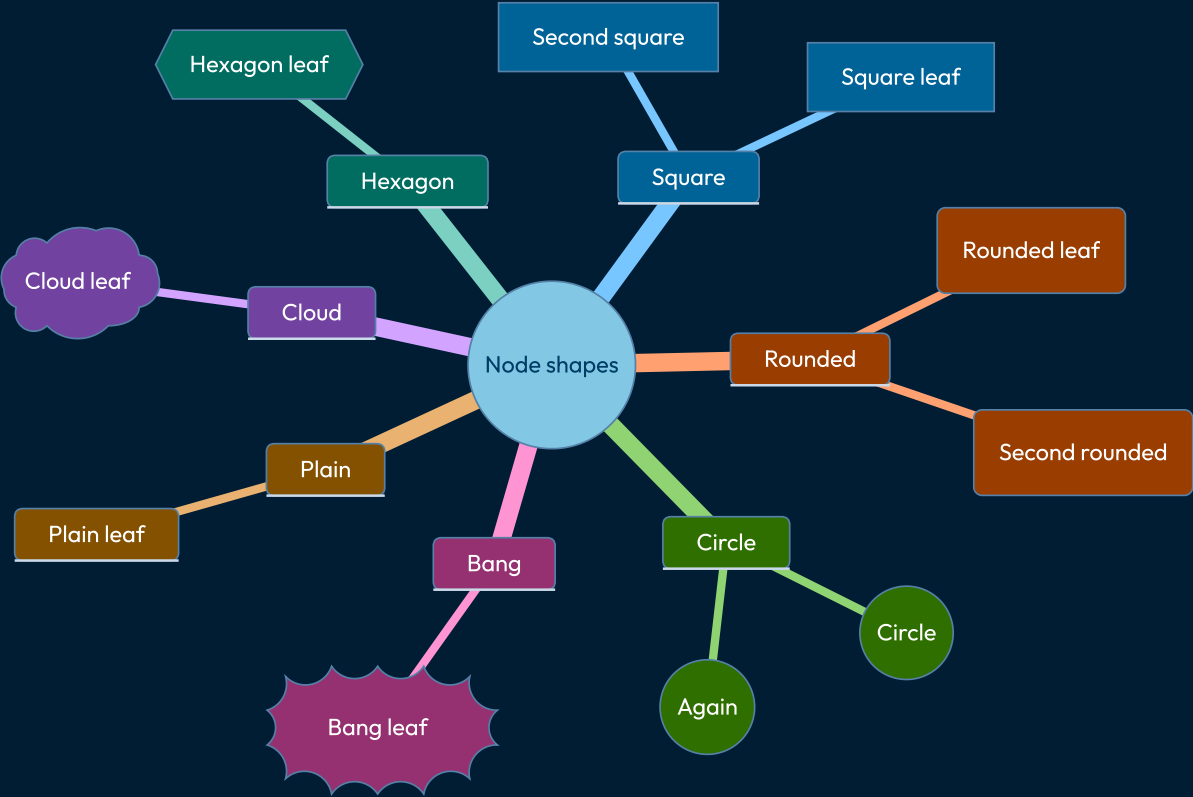

Square, rounded, circle, bang, cloud, hexagon and plain all follow the branch.

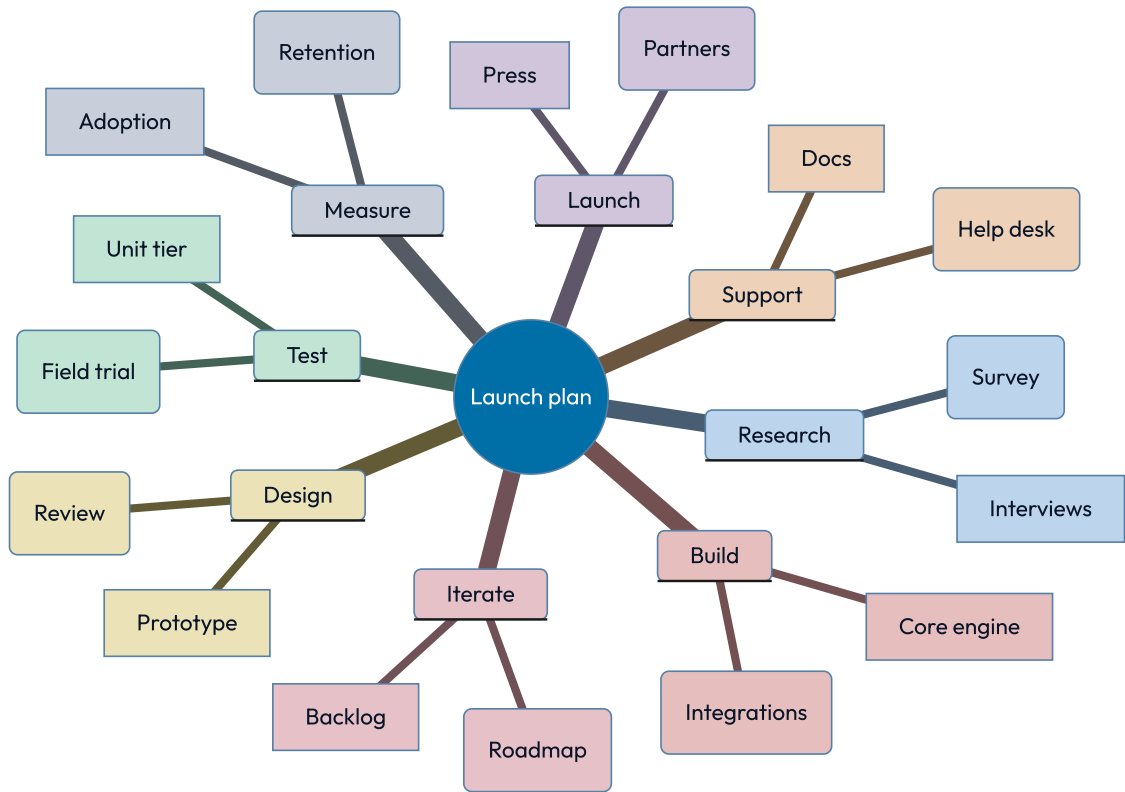

04 · EVERY NODE SHAPE, DARK

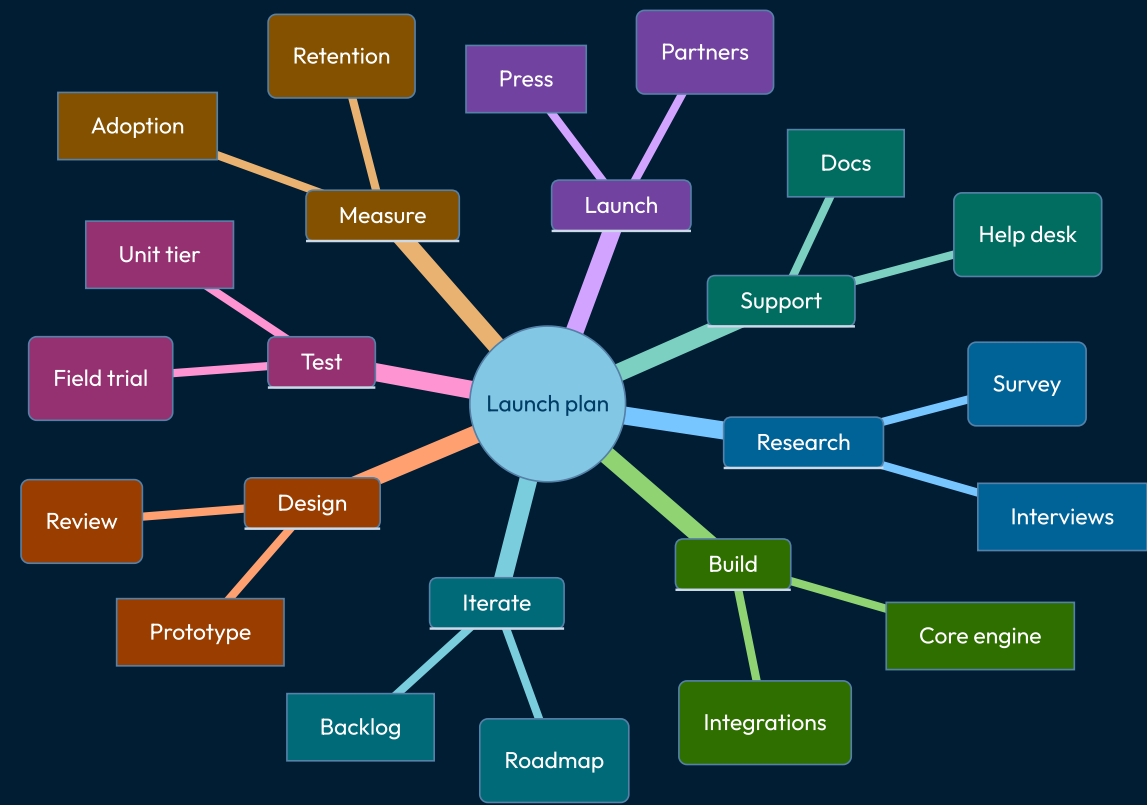

The same seven shapes on a dark canvas.

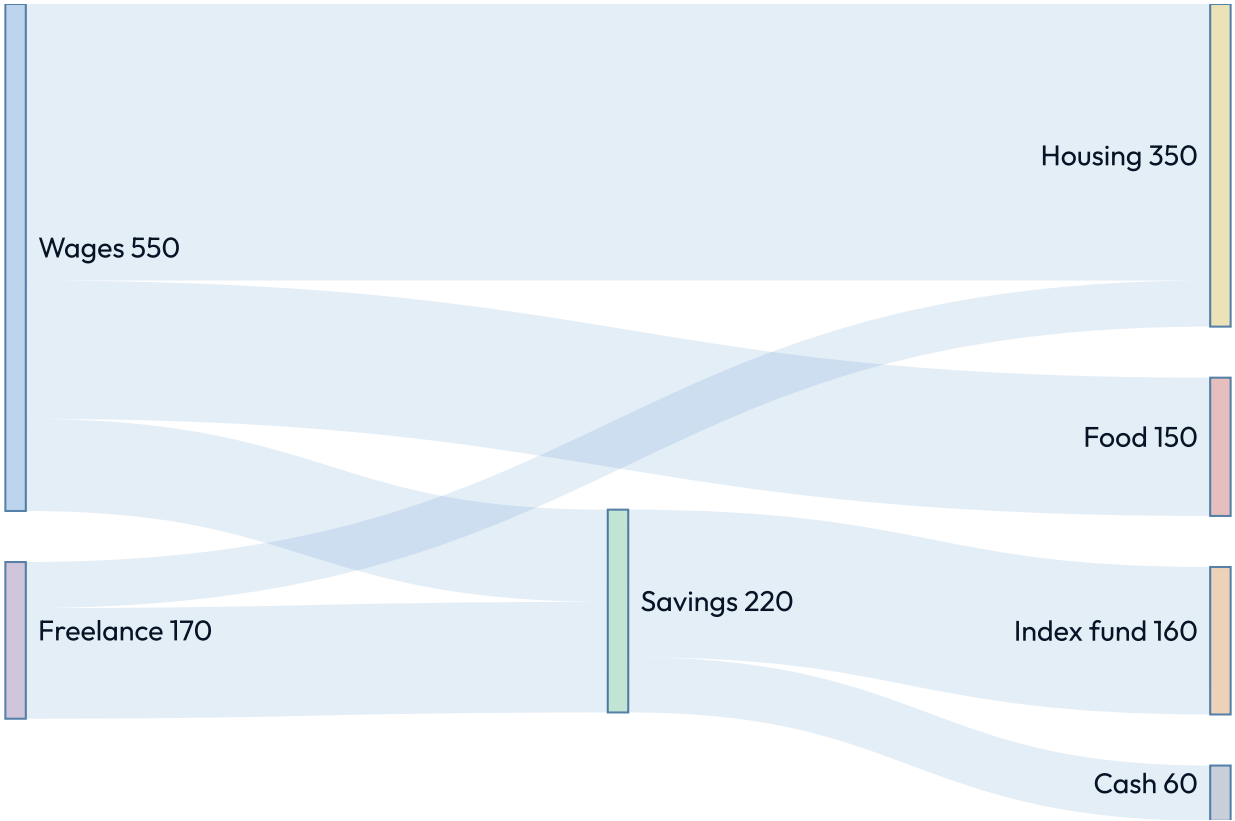

Past five branches the colors keep going instead of falling back to blue.

Branches seven and eight get colors of their own in dark mode too.

Sankey nodes still cycle by position, exactly as before.

Four fixes, all in one Mermaid stylesheet.

Position

The order-based node cycle skips mindmap, so leaves stop taking a color from their place in the markup.

Range

Node fills run through all twelve categories, for every shape.

Lines

Each line takes its branch's fill: darker on light, lighter on dark.

Root

The root takes the deck accent, apart from the first branch.
