# list-tabular

Hairline-ruled ledger of items — name on the left, body on the right.

# The tabular list rules rows into a register.

|    |            |                                         |                            |
|----|------------|-----------------------------------------|----------------------------|
| 01 | Rows       | Label, clause, optional meta line.      | TWELVE SOFT · SIXTEEN HARD |
| 02 | Looks      | Eight named looks reskin the same rows. |                            |
| 03 | Escalation | Long content leaves for a real table.   |                            |

# def pairs each term with its role.

---

|    |        |                                            |
|----|--------|--------------------------------------------|
| 01 | TERM   |                                            |
|    | Label  | def styles the register as definitions.    |
|    |        |                                            |
| 02 | ROLE   |                                            |
|    | Chip   | The inline code becomes a right-hand chip. |
|    |        |                                            |
| 03 | CLAUSE |                                            |
|    | Body   | One clause under each term.                |
|    |        |                                            |

# metric turns the chips into figures.

|    |                     |         |
|----|---------------------|---------|
| 01 | Rows carry values   | 12 / 16 |
| 02 | Figures right-align | 100%    |
| 03 | Labels stay short   | 4 rows  |

# spec documents flags and their types.

|    |               |                                          |        |
|----|---------------|------------------------------------------|--------|
| 01 | LATTICE_THEME | spec sets code labels beside type chips. | STRING |
| 02 | LATTICE_DEBUG | One clause explains each flag.           | BOOL   |

# register pairs names with status chips.

|    |             |         |
|----|-------------|---------|
| 01 | cards-grid  | STABLE  |
| 02 | split-panel | STABLE  |
| 03 | radar       | BETA    |
| 04 | word-cloud  | PREVIEW |

**rule draws a hairline under every row.**

---

**01** ON  
**Hairlines**

rule adds the horizontal separators.

**02** SAME  
**Density**

Budgets do not change with the look.

# solid fills the register with panel color.

|    |              |                  |
|----|--------------|------------------|
| 01 | Net new rows | 4                |
| 02 | Panel fill   | on               |
| 03 | Best for     | headline metrics |

# stacked drops the clause under its label.

|    |                                                               |           |
|----|---------------------------------------------------------------|-----------|
| 01 | GET /PLANS/:NAME<br>stacked gives each row two decks of text. | 200   404 |
| 02 | GET /GALLERY/:NAME<br>The clause wraps below, full width.     | 200       |

# outline boxes each row in a keyline.

|    |                    |        |

## When NOT to reach for list-tabular.

**Three or fewer rows.** The ledger needs density to justify its shape. For two to four items, reach for cards-stack — the rows get the room to breathe.

**Long per-row prose.** Each row is a name plus a sentence. If the description runs two or three sentences, move to cards-stack or split across slides.

**Stacking two primary variants.** `def`, `metric`, `spec`, and `register` are mutually exclusive. Pair each only with its secondary modifier (`def+rule`, `metric+solid`, `spec+stacked`, `register+outline`).

## RELATED COMPONENTS

# See also.

- `glossary` — term/definition pairs with auto-derived range pill
- `cards-stack` — two or three richer items, not a ledger
- `actors` — the left column is a named person, not a key
- `list` — rows are bullets without a label-plus-description shape
