

FEATURE DEMO

claim

Give the content the stage.

# Four presets, one purpose.

---

`claim` is how much of the frame the content claims vs the chrome. Set it deck-wide ( `claim: hero` ) or per slide ( `claim-hero` ).

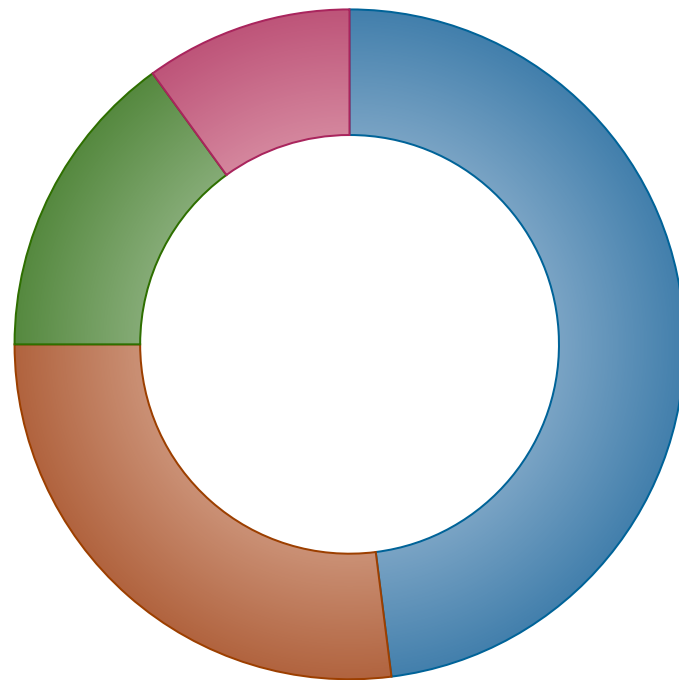

- **framed** — the default: full masthead, footer, section rail.
- **quiet** — recede the section rail + meta bay; keep the title and page number.
- **hero** — drop the bands; the content fills the stage (the page number reads through).
- **bleed** — edge-to-edge, no safe margin. Media and canvas.

SECTION 01

# The dial, on one chart.

# framed — full chrome.

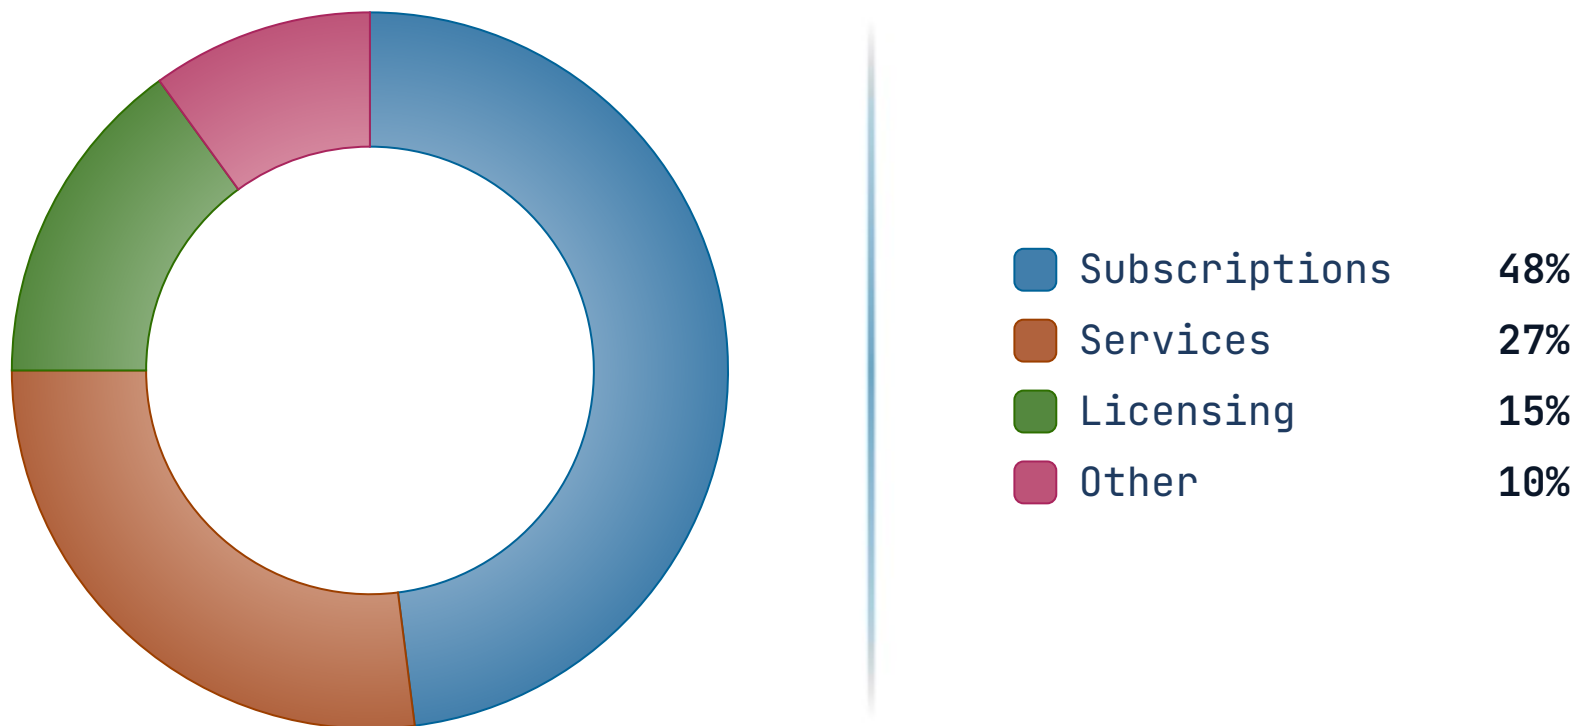

---

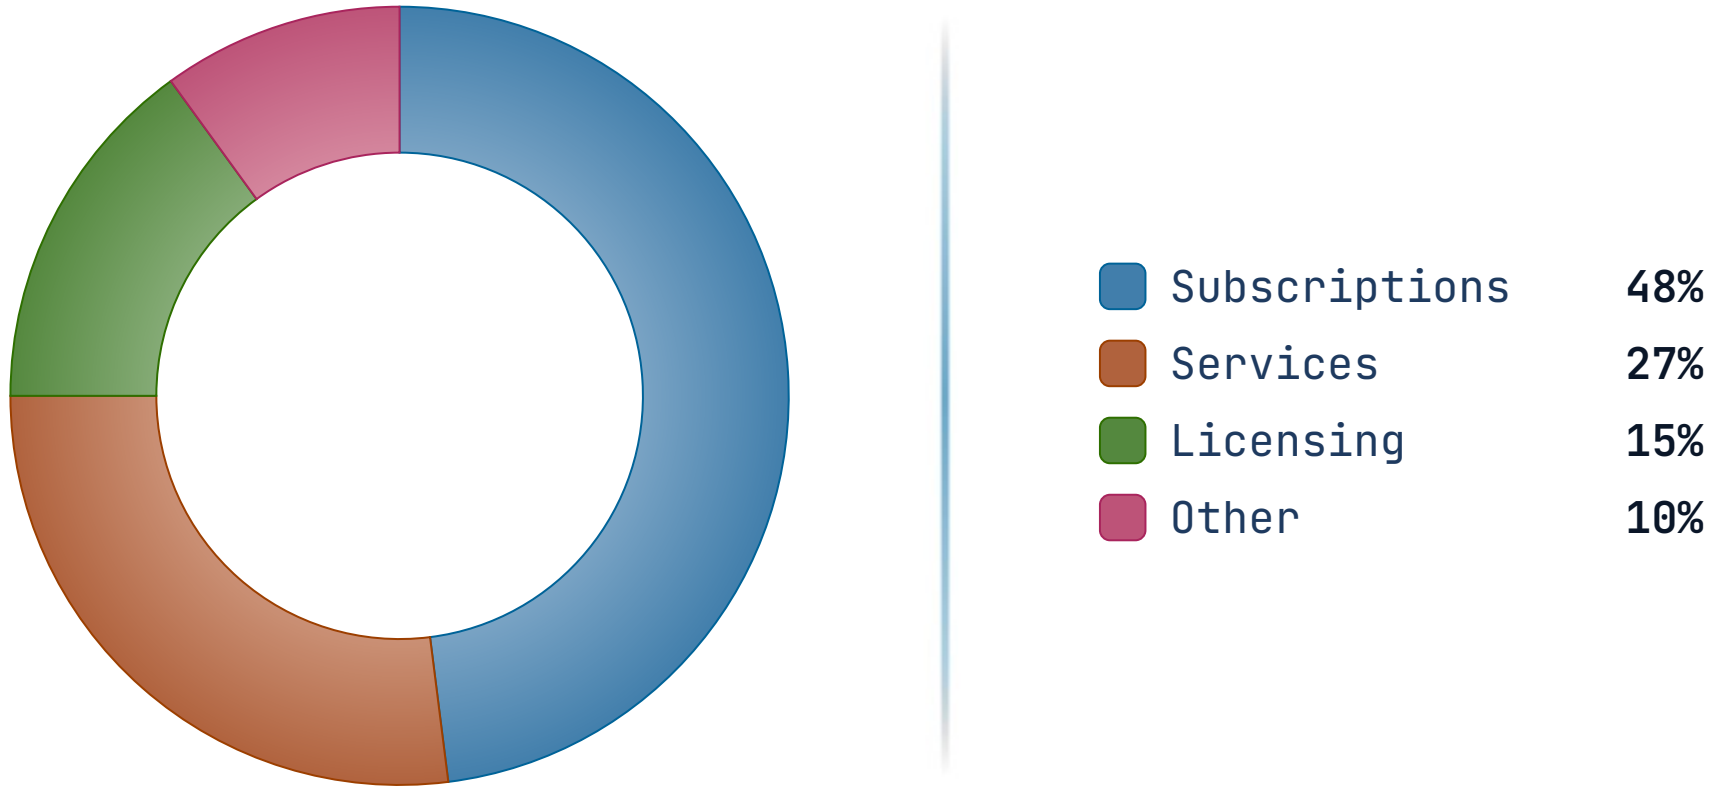

|                           |     |
|---------------------------|-----|
| <div></div> Subscriptions | 48% |
| <div></div> Services      | 27% |
| <div></div> Licensing     | 15% |
| <div></div> Other         | 10% |

# quiet — the rail and meta recede.

---

# hero — the chart takes the stage.

Nearly half came from subscriptions this year.

RECALL

92%

of an audience remembers a single number  
from a deck.

# The new endpoint.

---

```
app.post('/api/v2/auth', async (req, res) => {  
  const session = await issueSession(req.body);  
  res.json({ session });  
});
```

BLEED

100%

of the frame — no safe margin, so a dense  
table opts out.

CLAIM

Content takes the stage;  
you price the cost.

*Quiet trades the section rail. Hero trades  
the bands. Bleed trades the safe margin.*
