EVIDENCE · TIMELINE · SERIES

timeline-list

Date-stamped event list rendered as a horizontal spine — a dot per event with its date pill above and title, status pill, and body stacked below.

CHART · TIMELINE-LIST

The timeline pins events to their dates.

Four milestones show the shape; the date chips carry the when.

Q1

The first milestone

One clause says what changed here.

Q2

The second, marked

• decision

A tag names the milestone's kind.

Q3

The third milestone

Sixteen words is each entry's budget.

Q4

The fourth milestone

Four to six entries reads best.

TIMELINE-LIST · STRESS

Six milestones is the line's honest length.

The opening milestone

An entry at the hard budget carries one full clause and its consequence.

The second marker

Twenty-four words is the ceiling; spend them on what changed, not context.

The midpoint

The middle of a timeline is where attention sags — anchor it.

The fourth marker

Entries shorten as the line descends.

The fifth marker

The soft ceiling passed one entry ago.

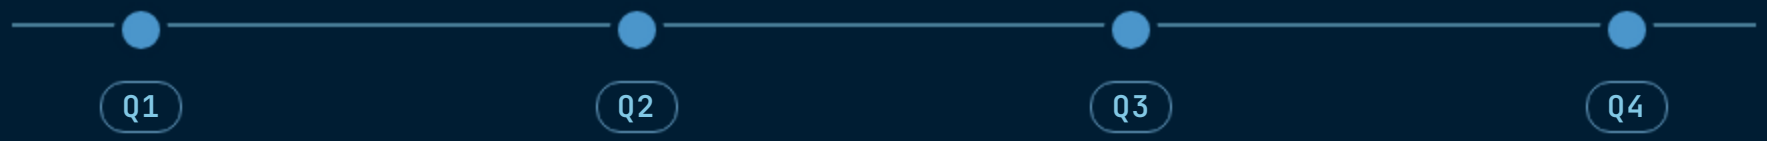

The last marker

Six is the stop; a seventh becomes a gantt.

When NOT to reach for timeline-list.

Date-less steps

No calendar dates? You have a sequence, not a timeline. Use `list-steps` for an ordered list or `journey` for stage-by-stage progress.

Date-range bars

If each milestone needs a start and end on a shared axis, it's a Gantt chart. Use `gantt` — bar geometry conveys the durations a pill cannot.

Status pills as decoration

A status pill is a verdict; only the shared ten count. Anything else draws one in the info color, and reads as deliberate.

RELATED COMPONENTS

See also.

`regulatory-update` — the dated entries are regulatory changes and every row carries a citation

`gantt` — milestones occupy date ranges, not single moments

`list-steps` — the sequence has no dates, just an order

`journey` — stage-by-stage progress without calendar dates

`roadmap` — the timeline is forward-looking and bucketed by horizon

`progress` — the events are parallel workstreams with completion percentages
