# When NOT to reach for kpi.

## Decorative pills without status semantics

The pills read as status, not freeform tags. Status color is assigned by each KPI's row position within the modifier — the engine never reads the pill text — so reserve them for the status vocabulary the position implies ( `On plan`, `At risk`, `Breaching`, `Compliant`, `Remediating` ). Arbitrary labels land a color that has nothing to do with the words.

## More than four KPIs in attention or spotlight

`attention` highlights the metric that needs the room; `spotlight` monumentalizes one number. Past four KPIs the visual hierarchy collapses — split into two slides.

## No targets, no trends

If the KPIs carry only current values, the slide is a stats row, not a kpi dashboard. Use stats and reclaim the room.

RELATED COMPONENTS

# See also.

`stats` — metric row without targets or status pills

`big-number` — a single number is the whole argument

`split-panel` — one KPI with a paragraph of supporting prose

`progress` — completion percentages across parallel  
workstreams

`timeline-list` — milestones in time, not metrics at a moment
