

LABEL SETS • HEATMAP • THE KEY A RAMP WAS MISSING

Name the bands, or let the chart do it.

A heatmap's five tones carry meaning no reader can recover from the tones alone.

A **label set** names them — derived from the data by default, overridden where the words matter.

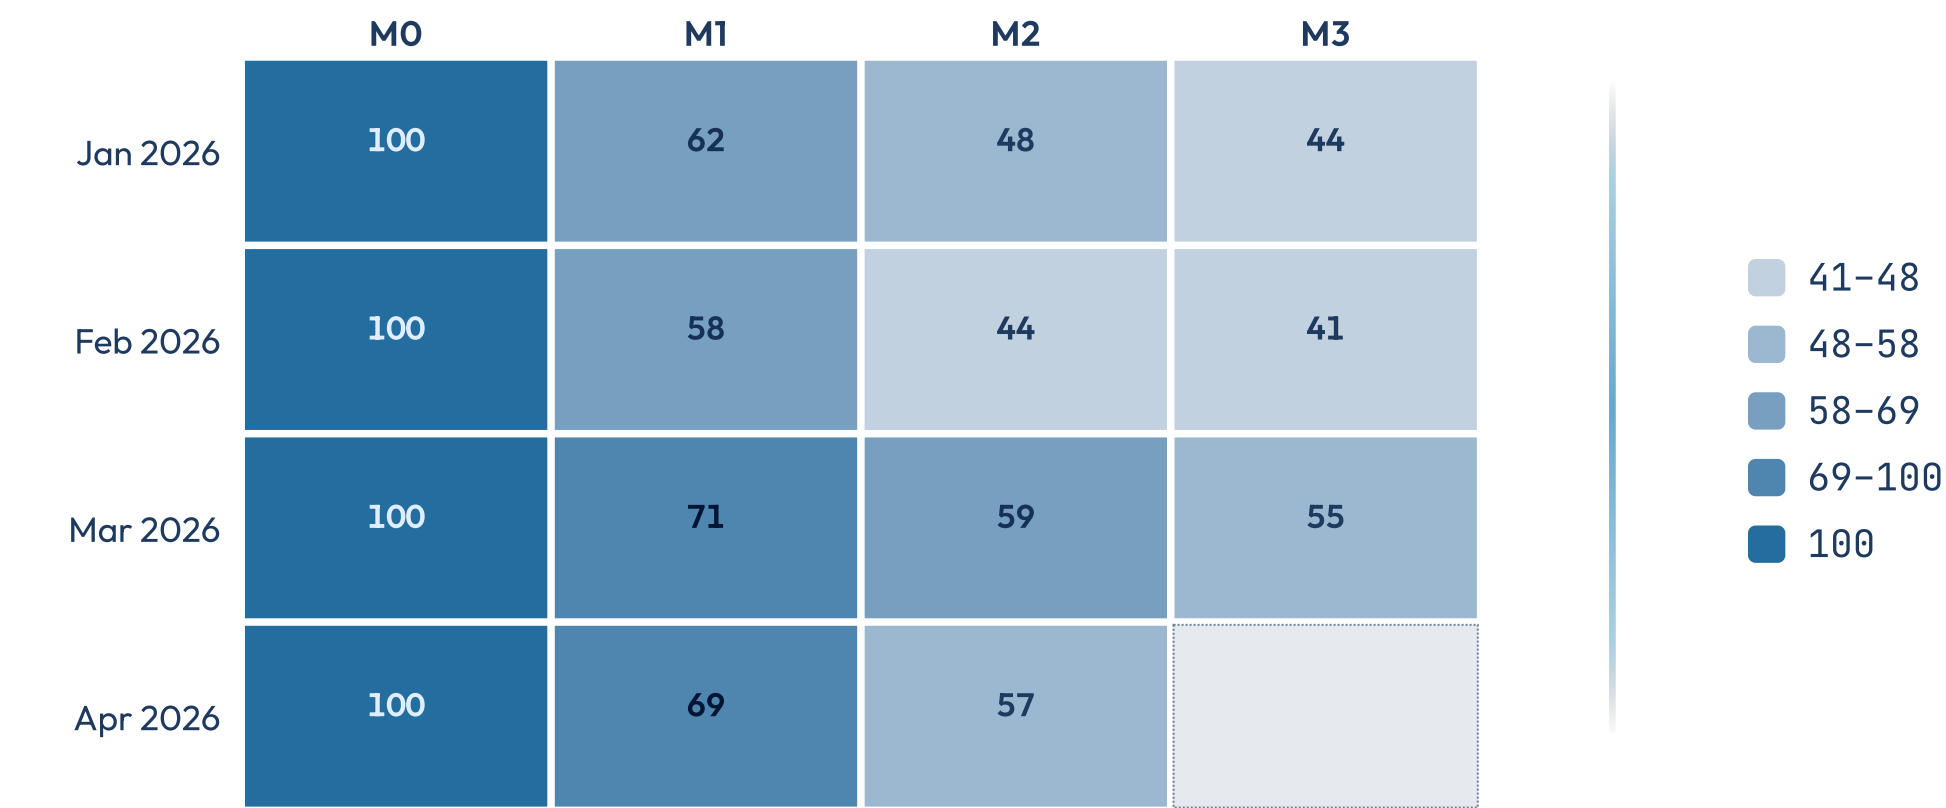

RETENTION · 2026 COHORTS

Without a key, the tones are unexplained.

	M0	M1	M2	M3
Jan 2026	100	62	48	44
Feb 2026	100	58	44	41
Mar 2026	100	71	59	55
Apr 2026	100	69	57	

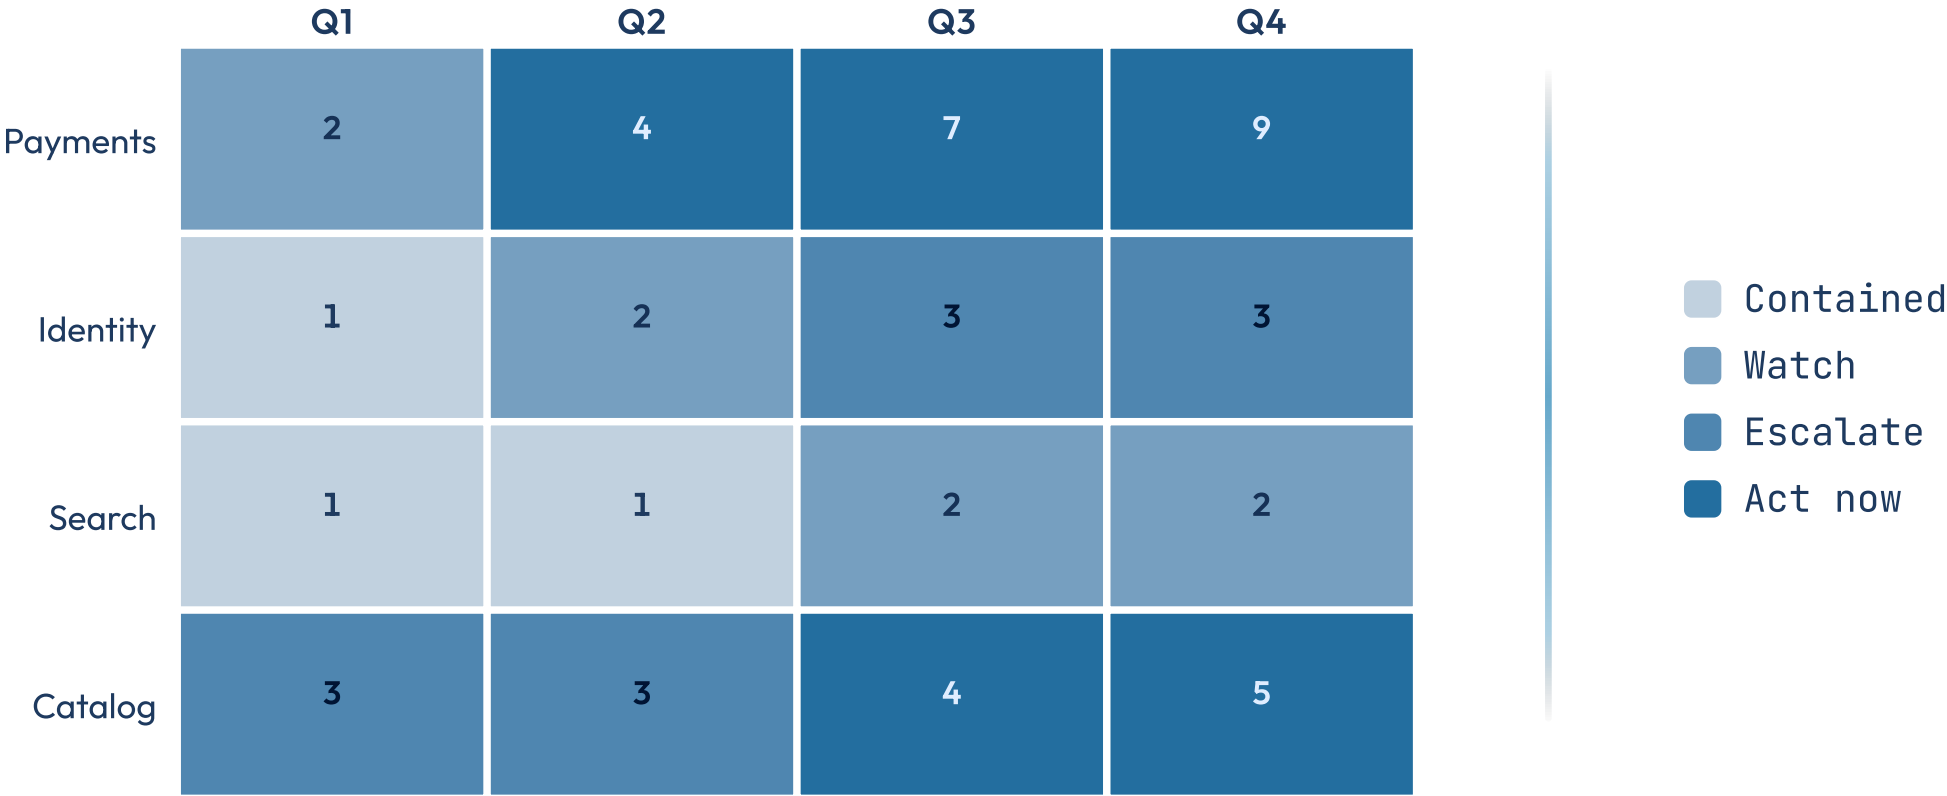

RETENTION · 2026 COHORTS

The chart can name its own bands.

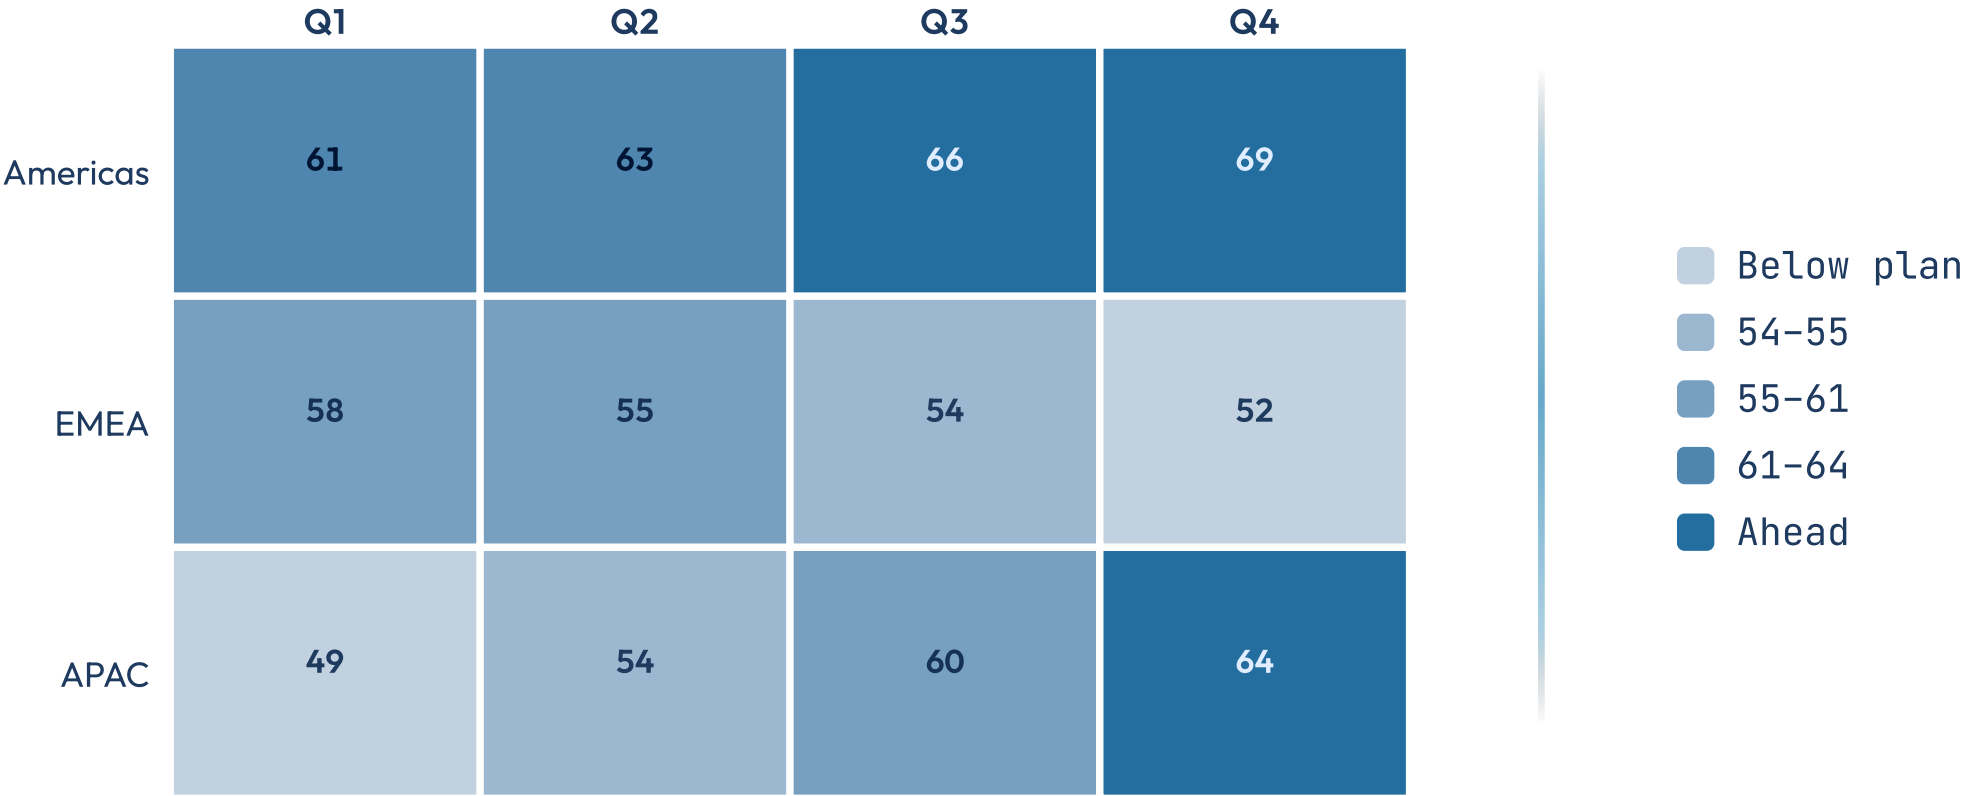

RISK · BY SYSTEM AND QUARTER

Where a number means nothing, a word means everything.

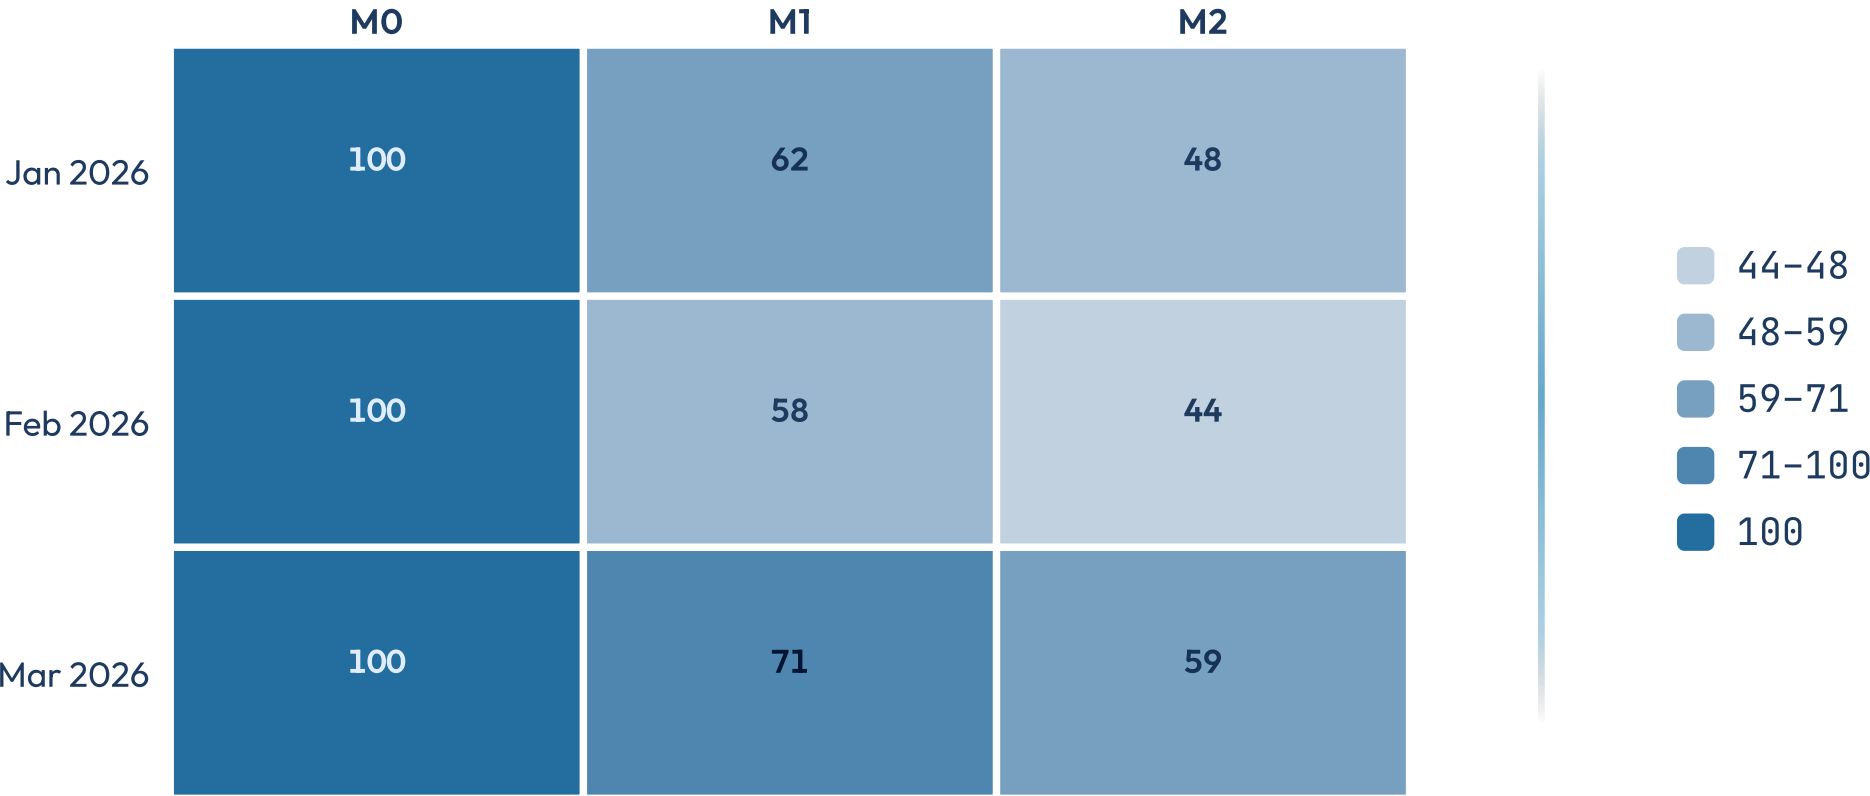

MARGIN · BY REGION

Name only the bands that carry a decision.

A cell can carry its own explanation.

One entry, three ways to write it.

- **Derived.**

- Add `scale` and the chart names each band by the values it covers.

- **Inline.**

- ``[{1, Cold}, {3, Warm}, {5, Hot}]`` above the table. Name some, keep the rest.

- **Per cell.**

- ``# prose`` inside a cell. Hover on screen, speaker note in print.
