

DIAGRAM TYPE · ENGINE

The hand reaches the diagram

A sketch deck used to wrap hand-drawn shapes around machine-faced labels. Now the type carries through.

#1674 · FLOWCHART

Long labels, measured in the face they are painted in.

WHY IT WAS NEVER A CSS FIX

Mermaid measures a label in the browser that renders it.

- The measurement was somewhere else
 - The export shelled out to a binary whose page carries none of the deck's fonts, so every label was sized in a fallback face.
- Then the paint moved
 - The finished SVG lands in the deck, where the real face loads — and the text no longer fits the box it was measured for.
- Why mono never showed it
 - Its stack ends in the `monospace` generic, whose fallback metrics nearly match. No hand face has that luck.

STATE · THE SAME FACE THROUGHOUT

Nothing here is sketch-specific.

HOW THE TYPE GETS THERE

It follows a token, like every other run of text on the slide.

- One re-point
 - The sketch finish already points `--font-body` at `--sketch-font-body`. The diagram map reads `--font-body`.
- One reader taught one rule
 - The export resolves tokens offline, where a class-scoped rule is invisible, so it applies that re-point itself.
- Both paths, one answer
 - The preview and the export now configure Mermaid identically. There is no sanctioned divergence left between them.

CLASS · UNIFIED RENDERER

Hand shapes and hand type are separate answers.

PER-SLIDE OPT-OUT

One slide can step out of the finish entirely.

LEGACY RENDERER

Sequence keeps machine-drawn shapes – and still speaks in the deck's voice.

WHERE THE SHAPE ANSWER STOPS

Texture outranks the finish, and always did.

- Pattern is data, not decoration
 - On `a11y-*`, `onyx` and `concrete` the per-category texture is how a color-blind or monochrome reader tells nodes apart.
- A hachure cannot carry a tile
 - Painted through a 4px variable-width stroke, four distinct patterns collapse to four grays 5% apart.
- So those decks split the difference
 - Machine-drawn shapes, hand type. Style never overwrites an accessibility affordance.
