

FIT LADDER • THE COVER-PAGINATE MOVE

Dense lists, split with a cover

A long register can't shrink to fit — so when it overflows, the engine leads with a cover, then flows the layout's own cards on. Same deck, just more of it.

What cover-paginate adds

A dense list overflows? It can't
drop a type size — readability is
the floor

**What the board will
press on.**

The questions, answered →

What the board will press on.

01

Why not extend the current vendor one more year?

The renewal lands in Q3 and locks us in through 2028. Switching now costs a single quarter of migration; switching after renewal costs three.

→ next: What happens to the team mid-migration?

What the board will press on. (cont.)

02

What happens to the team mid-migration?

No headcount change. The same four engineers run both stacks through the eight-week overlap, then the legacy stack is decommissioned.

→ next: How confident are we in the savings?

What the board will press on. (cont.)

03

How confident are we in the savings?

The \$1.2M is contracted, not projected — the signed rate differential, before any usage growth.

→ next: What is the rollback plan if the cutover...

What the board will press on. (cont.)

04

What is the rollback plan if the cutover fails?

The legacy stack stays warm for the full overlap; a failed cutover reverts in under an hour with no data loss.

Glossary C – S

The terms, defined →

TERM	DEFINITION
Consent	A freely given, specific, informed agreement to processing — pre-ticked boxes don't count.

→ next: Controller

TERM	DEFINITION
Controller	The party that decides why and how personal data is processed, and carries the legal accountability for it.

→ next: DSAR

TERM	DEFINITION
DSAR	Data Subject Access Request — a person's demand to see, correct, or delete the data held on them, on a 45-day clock.

→ next: Legitimate interest

TERM	DEFINITION
Legitimate interest	A lawful basis that balances the controller's purpose against the data subject's rights, no consent required.

→ next: PII

TERM	DEFINITION
PII	Personal information that identifies a person, now read broadly enough to cover device IDs, cookies, and IP addresses.

→ next: Processor

TERM	DEFINITION
Processor	A party that processes data on the controller's instructions — a vendor, not the decision-maker.

→ next: Pseudonymisation

TERM	DEFINITION
Pseudonymisation	Replacing identifiers with tokens so data can't be tied to a person without separately held keys.

→ next: Special category

TERM	DEFINITION
Special category	Sensitive data — health, biometrics, beliefs — carrying heightened processing conditions.
