LEGEND PLUGIN · WAVE 0

# Labels a chart did not have

One model for every key, value label and callout. First capability: a heatmap callout, written in one line.

RETENTION · 2026 COHORTS

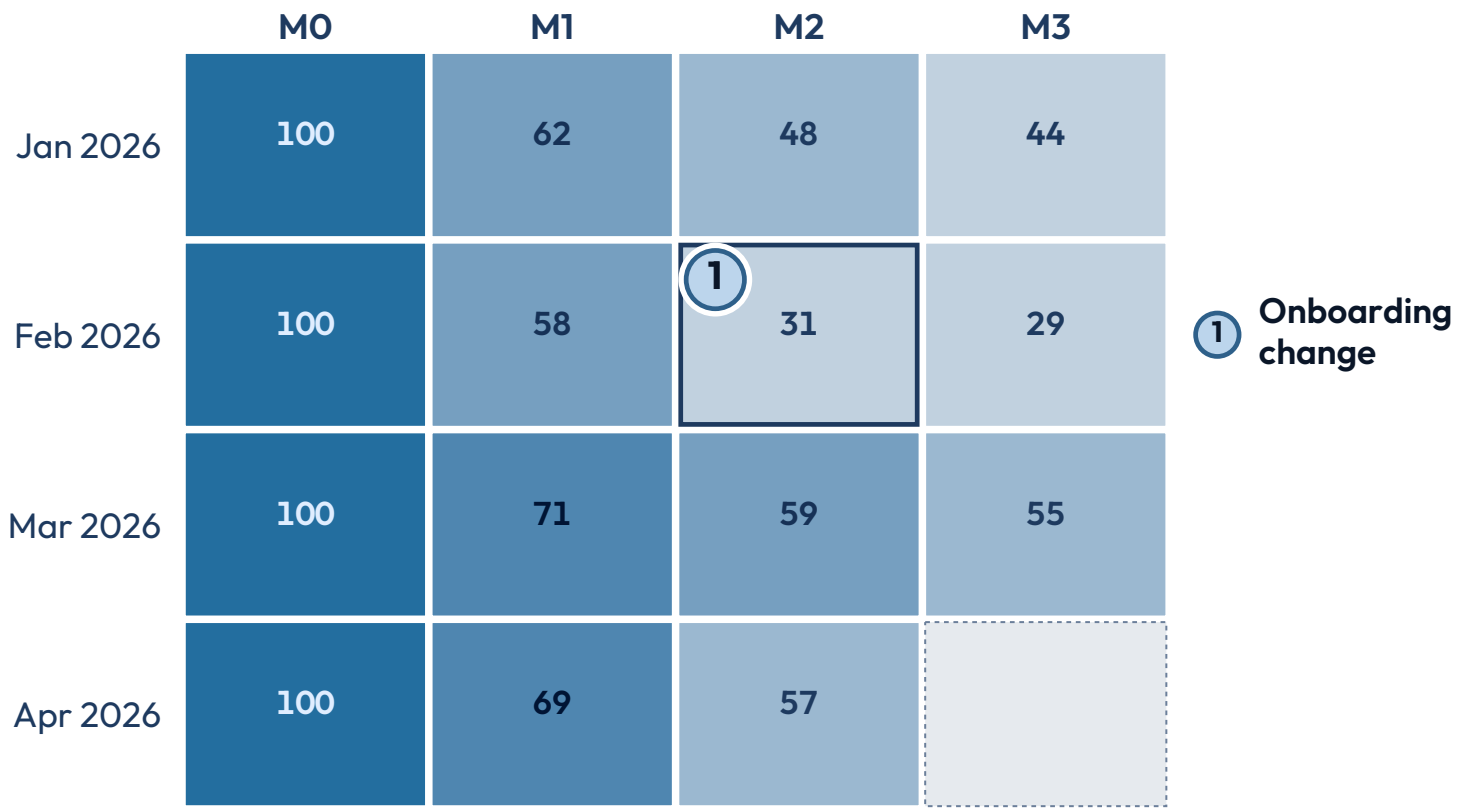

# Before: the grid carries the data, and nothing points at the story.

Before · a heatmap with no callout. The reader has to find the drop-off alone.

RETENTION · 2026 COHORTS

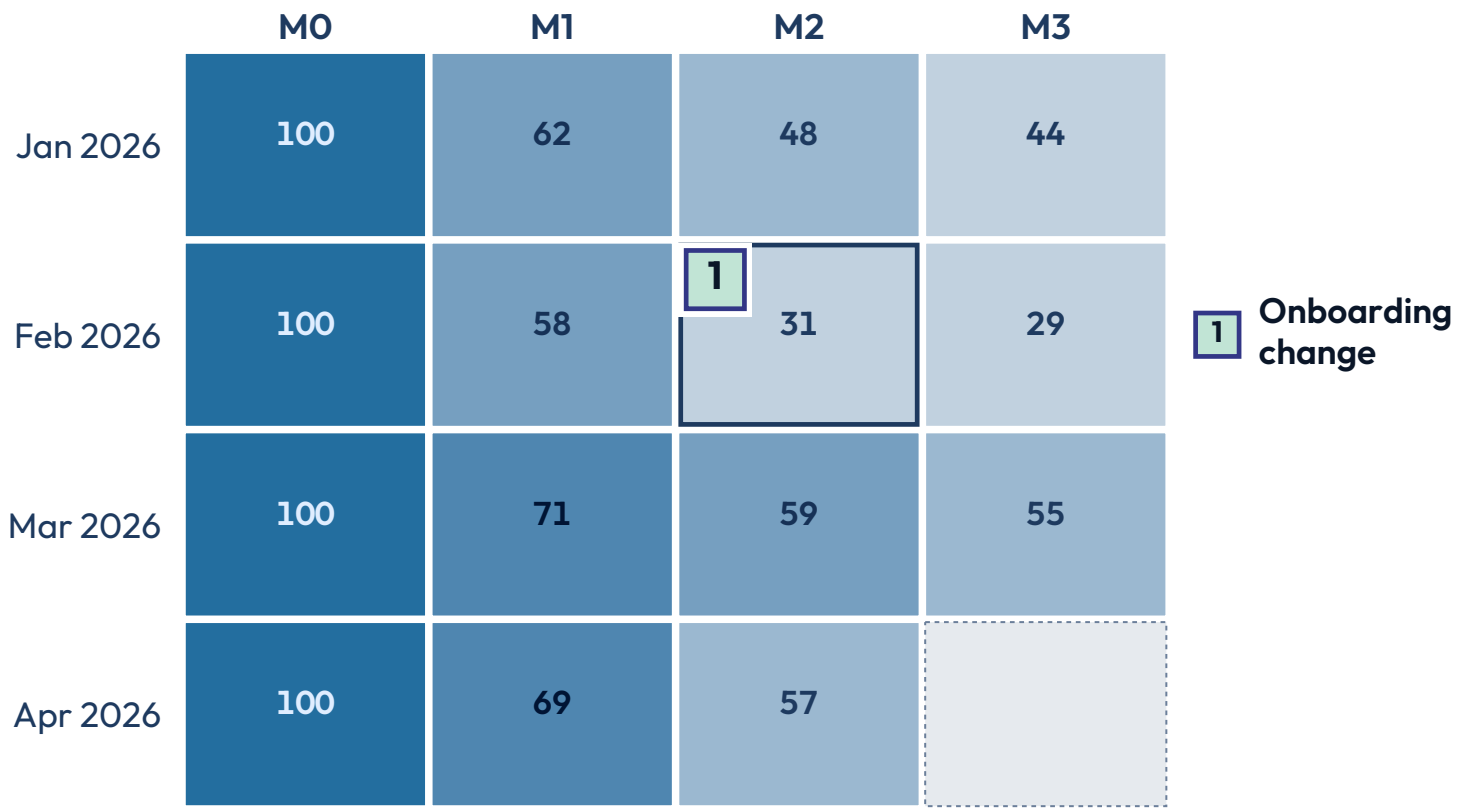

# A numbered callout names the cell that matters.

The default: a numbered circle on the cell, the same number before the words.

RETENTION · 2026 COHORTS

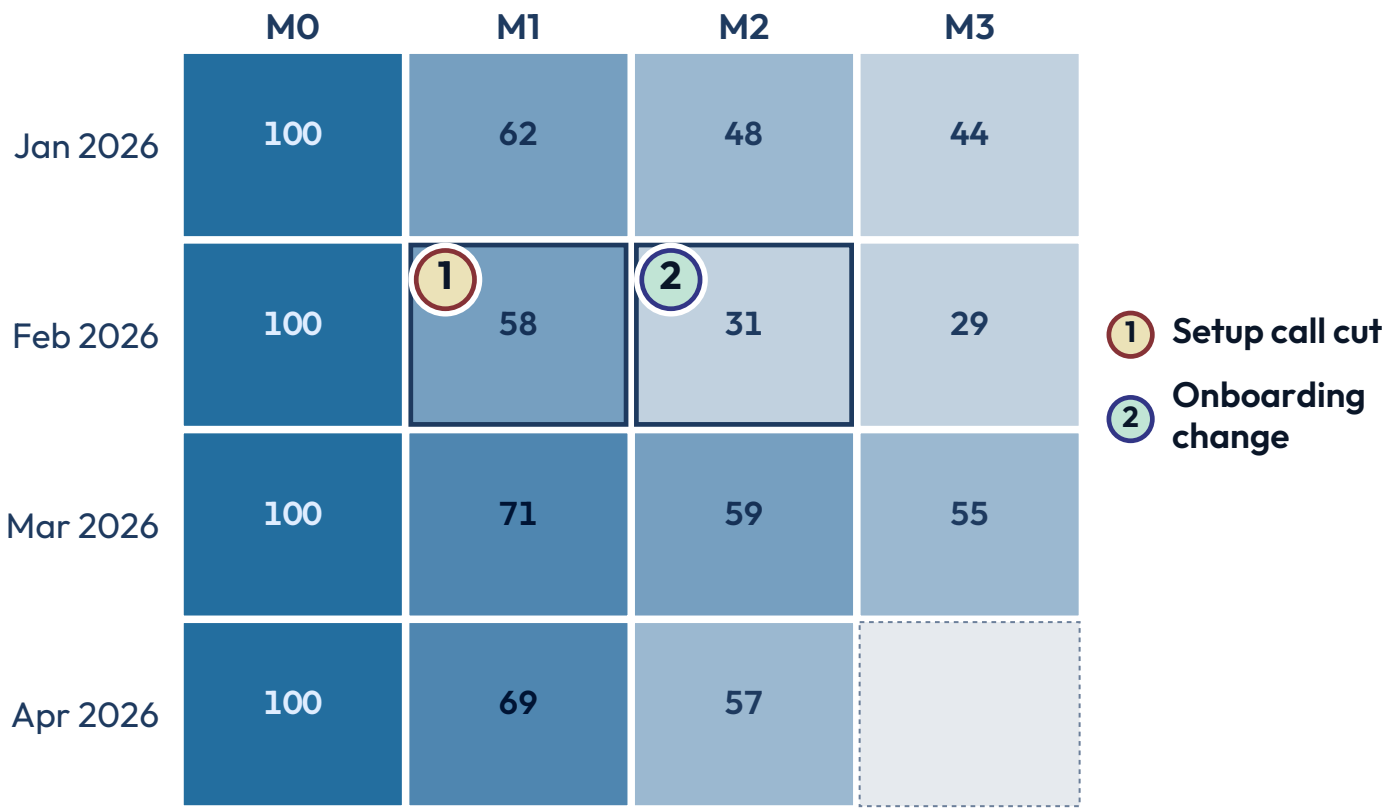

# The marker carries the pill's shape and color.

The marker is the pill: {…, tag, c4} puts the number on a tag in color slot 4.

RETENTION · 2026 COHORTS

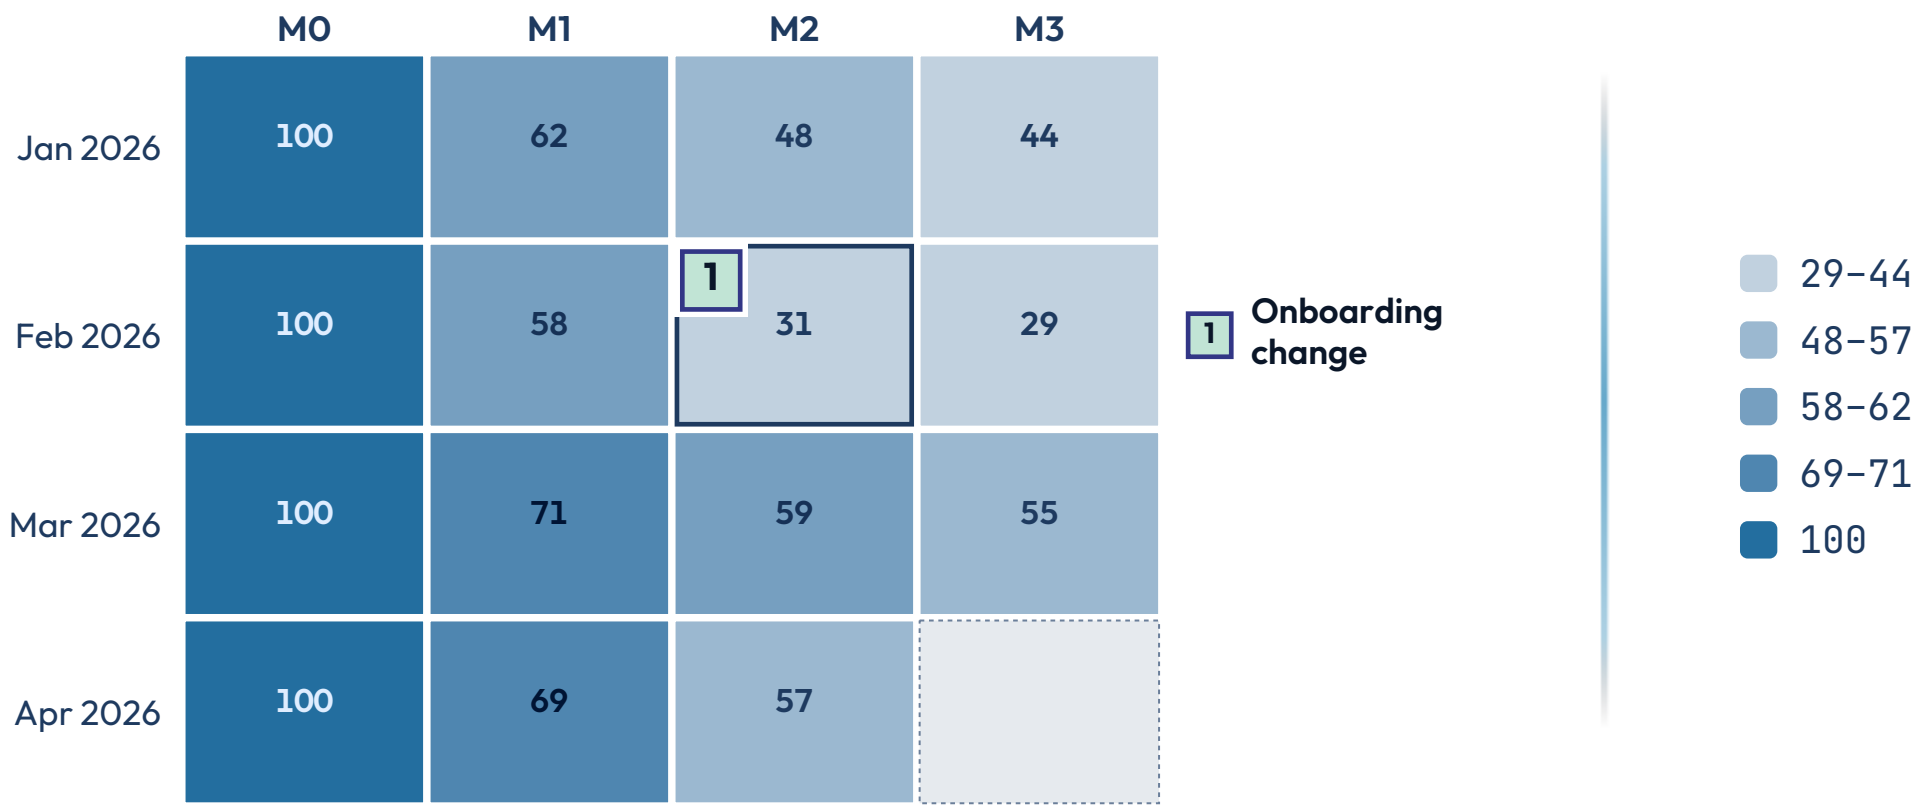

# Two callouts on one row, and neither is ambiguous.

A list of records. Two on one row stay apart: a number crosses nothing.

RETENTION · 2026 COHORTS

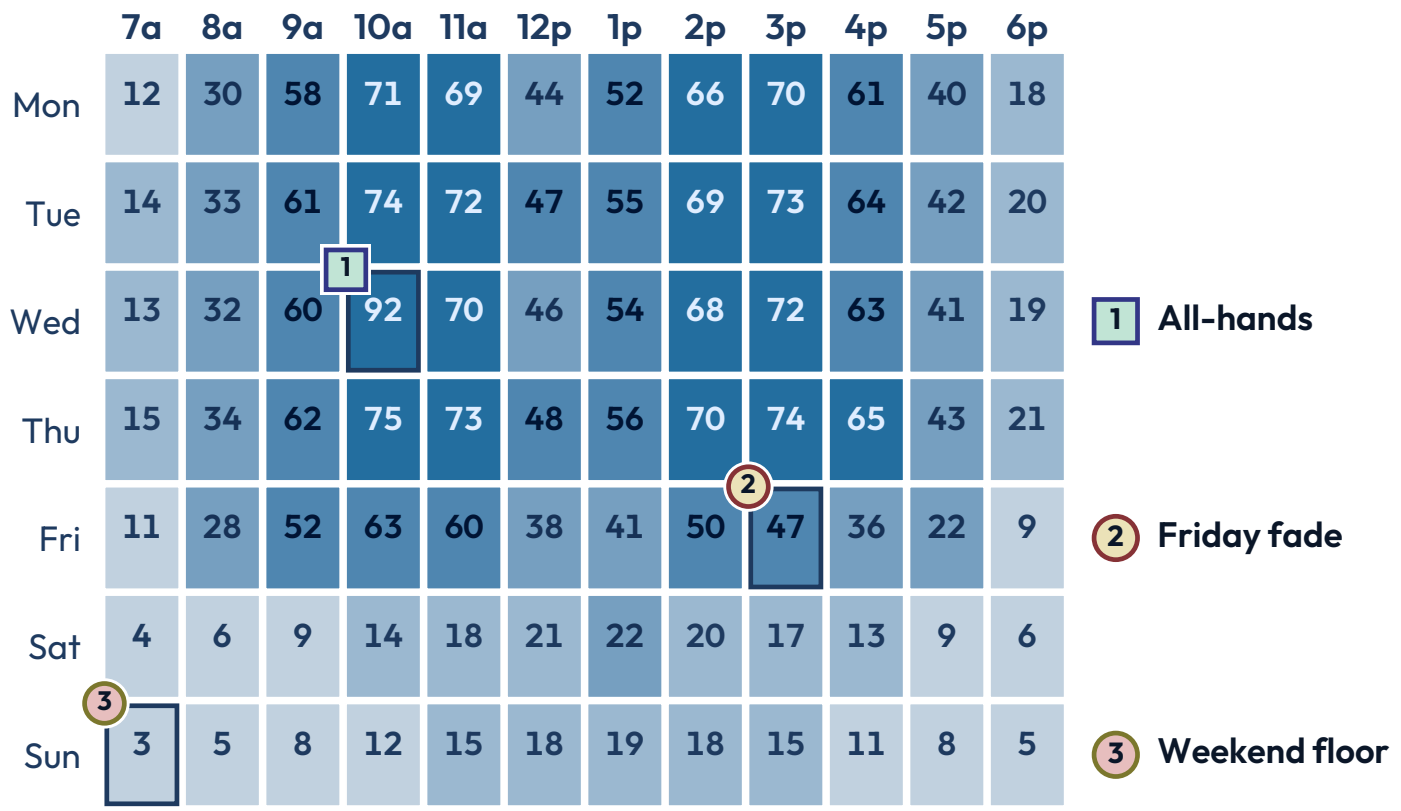

# The callout and the band key share one figure.

With the band key. The callout takes its lane beside the grid and the key keeps its rail beyond it.

USAGE · HOUR BY WEEKDAY

# At the density ceiling, callouts still find room.

Stress · seven by twelve. On a small cell the marker moves onto the corner, clear of the value.

# One line of Markdown, every surface: the slide, the hover card, the speaker note, narration.

A heatmap callout is the legend plugin's first capability. The other charts' keys move onto the same model one at a time.
