READ · ARTICLE · SIX CHARTS

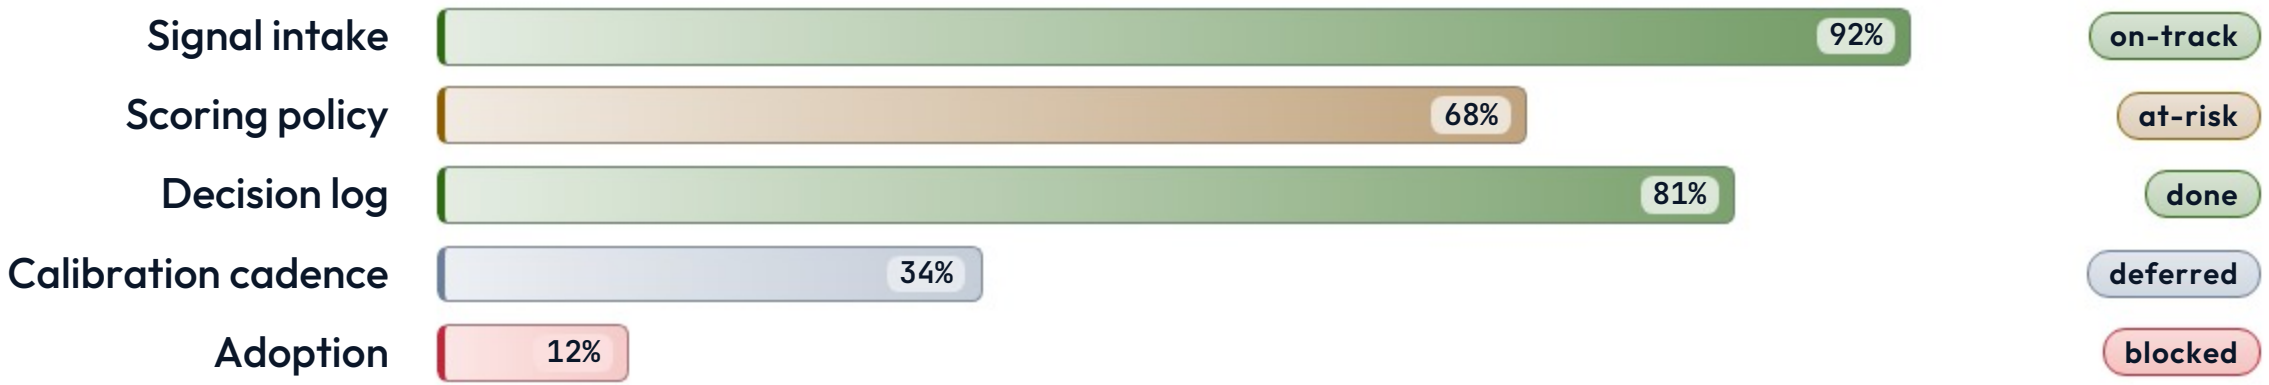

Charts keep their color when they leave the slide.

Open this deck's player, switch to **Read · Article**, and each chart below keeps the status pills, header rule and cell marks it has on its slide.

H1 2026 · PHASE 1 READINESS

Each status pill keeps its color in the article.

The pill rule matched only a chart on a slide. It now matches the chart the article re-hosts too.

ROLLOUT · 2026

The timeline's status pills keep theirs too.

Same pill rule as progress

H2 2026 · ROLLOUT PLAN

The roadmap's header rule draws in the article.

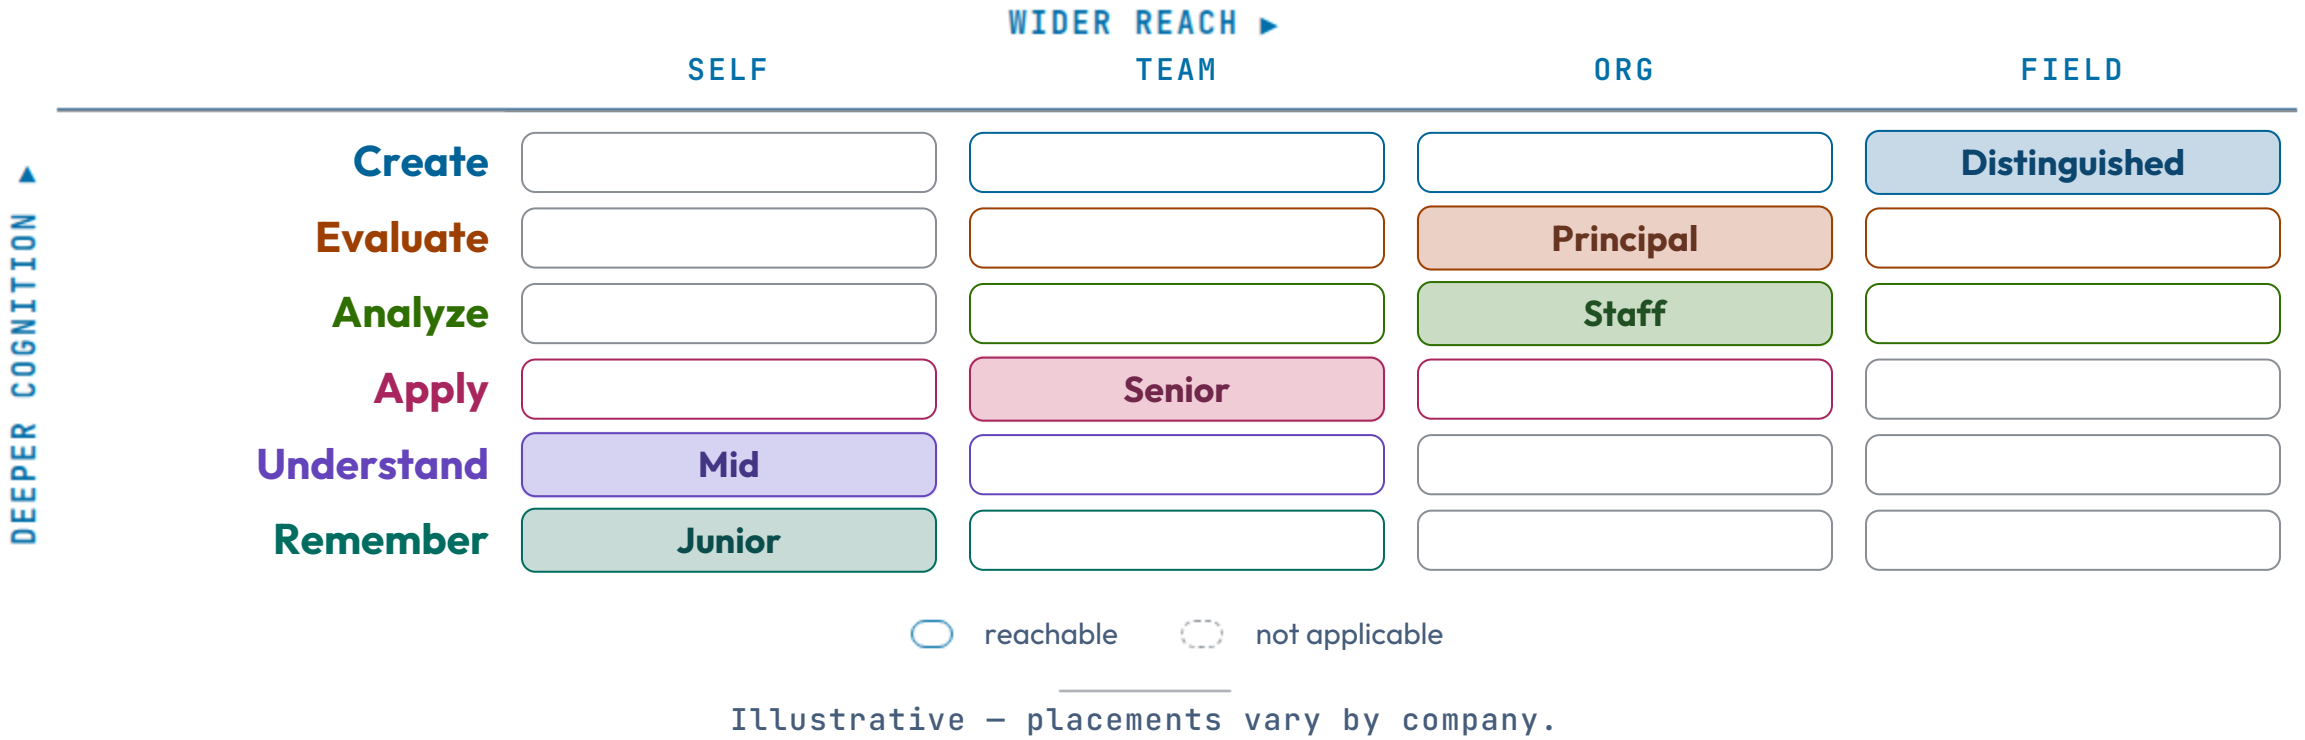

WORKSTREAM	FOUNDATION · Q2 2026	HARDENING · Q3 2026	SCALE · Q4 2026
Framework	✓ Signal taxonomy	− Scoring model v2	○ Per-team weights
Governance	✓ Decision log	✓ Calibration cadence	? Board reporting
Tooling	× Intake form	⁄ ~~Dashboards~~	○ Self-serve

✓ Shipped − In flight × Missed ? Uncertain ○ Planned ⁄ Out of scope

The header rule read a token only a slide defined

The grid keeps its filled and outlined cells.

The filled cell is the level; the outlined cells are its reach. The article now shows the chart, not a plain table.

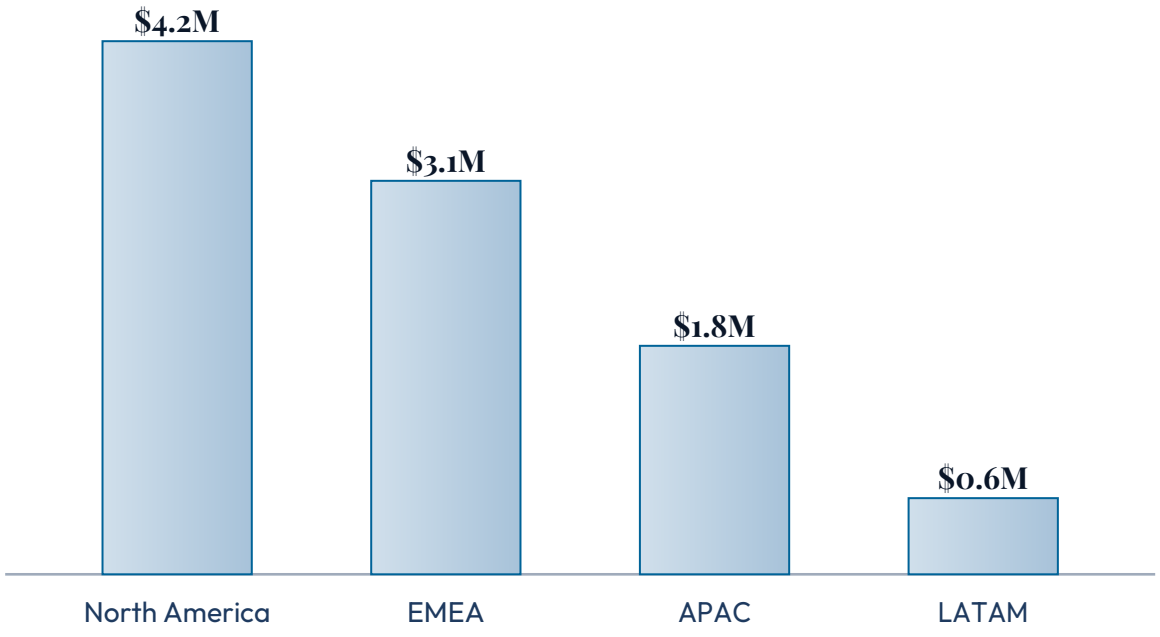

Illustrative — placements vary by company.

The article used to flatten this grid to a plain table

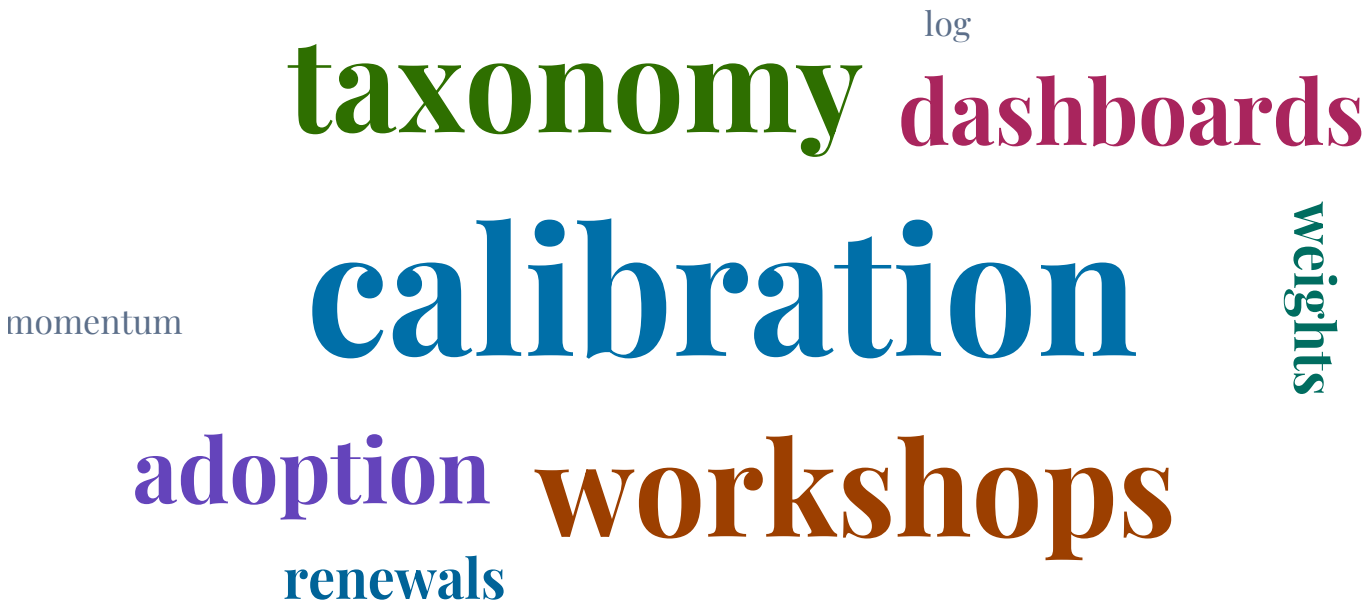

REVENUE · FY26

The article prints the caption the author wrote.

Source: **audited** regional filings, FY26.

A word cloud keeps its caption too.

SIZE = FREQUENCY

From 24 pilot retros, **unprompted.**

A gate found all three causes, and now holds the line.

`check:render` compares every chart's article copy against its slide, paint by paint, in three themes, light and dark. It found ten lost paints from three causes. All ten now survive, and their sanctions are gone from the baseline, so a regression fails the gate instead of passing as a known loss.

LATTICE · ONE STYLE-DELIVERY SPINE

Same chart, slide or article.

Review the article view in both light and dark before you merge.
