

INVENTORY • LEDGER • STRUCTURE

actors

Roster of responsibilities owned by named actors.

The actors ledger names who owns what.

Owns one row

Each actor

A verb-first responsibility, twelve words at most.

Reads top to bottom

The ledger

Order carries seniority or sequence.

Answers by name

The role chip

The inline code names the seat.

Stops at six rows

This layout

Past six, reach for list-tabular.

Seven rows is where the ledger maxes out.

Row one	First seat
Even at the ceiling, every row keeps a verb-first responsibility line.	
Row two	Second seat
Eighteen words is the hard budget; this row spends most of them deliberately.	
Row three	Third seat
Rows stay parallel or the column of chips stops lining up.	
Row four	Fourth seat
Middle rows read fastest; bury nothing important here.	
Row five	Fifth seat
The eye is tiring by now — keep these short.	
Row six	Sixth seat
The soft ceiling was one row ago.	
Row seven	Last seat
The hard stop; an eighth row means a second slide.	

The actors ledger names who owns what.

Owns one row

Each actor

A verb-first responsibility, twelve words at most.

Reads top to bottom

This layout

Past six, reach for list-tabular.

When NOT to reach for actors.

Process sequence

If the rows describe stages in order, use list-steps or process-flow. actors is for parallel ownership, not handoff sequence.

Long per-actor prose

More than one sentence per row crowds the ledger. Move the detail to a dedicated slide and keep actors as the index.

Roles without names

If the labels are job titles in the abstract ("the engineer"), reach for cards-stack or list. The actors layout earns its weight when the names are named.

RELATED COMPONENTS

See also.

`list-tabular` — rows are reference entries, not owners

`cards-stack` — each item needs two sentences of body text

`list` — declared statements — the `principles` variant

`glossary` — the left column is a term, not an actor
