FIX · SLIDE BACKGROUNDS

A background on any slide

The CLI now draws `![bg]` the way the Studio always has

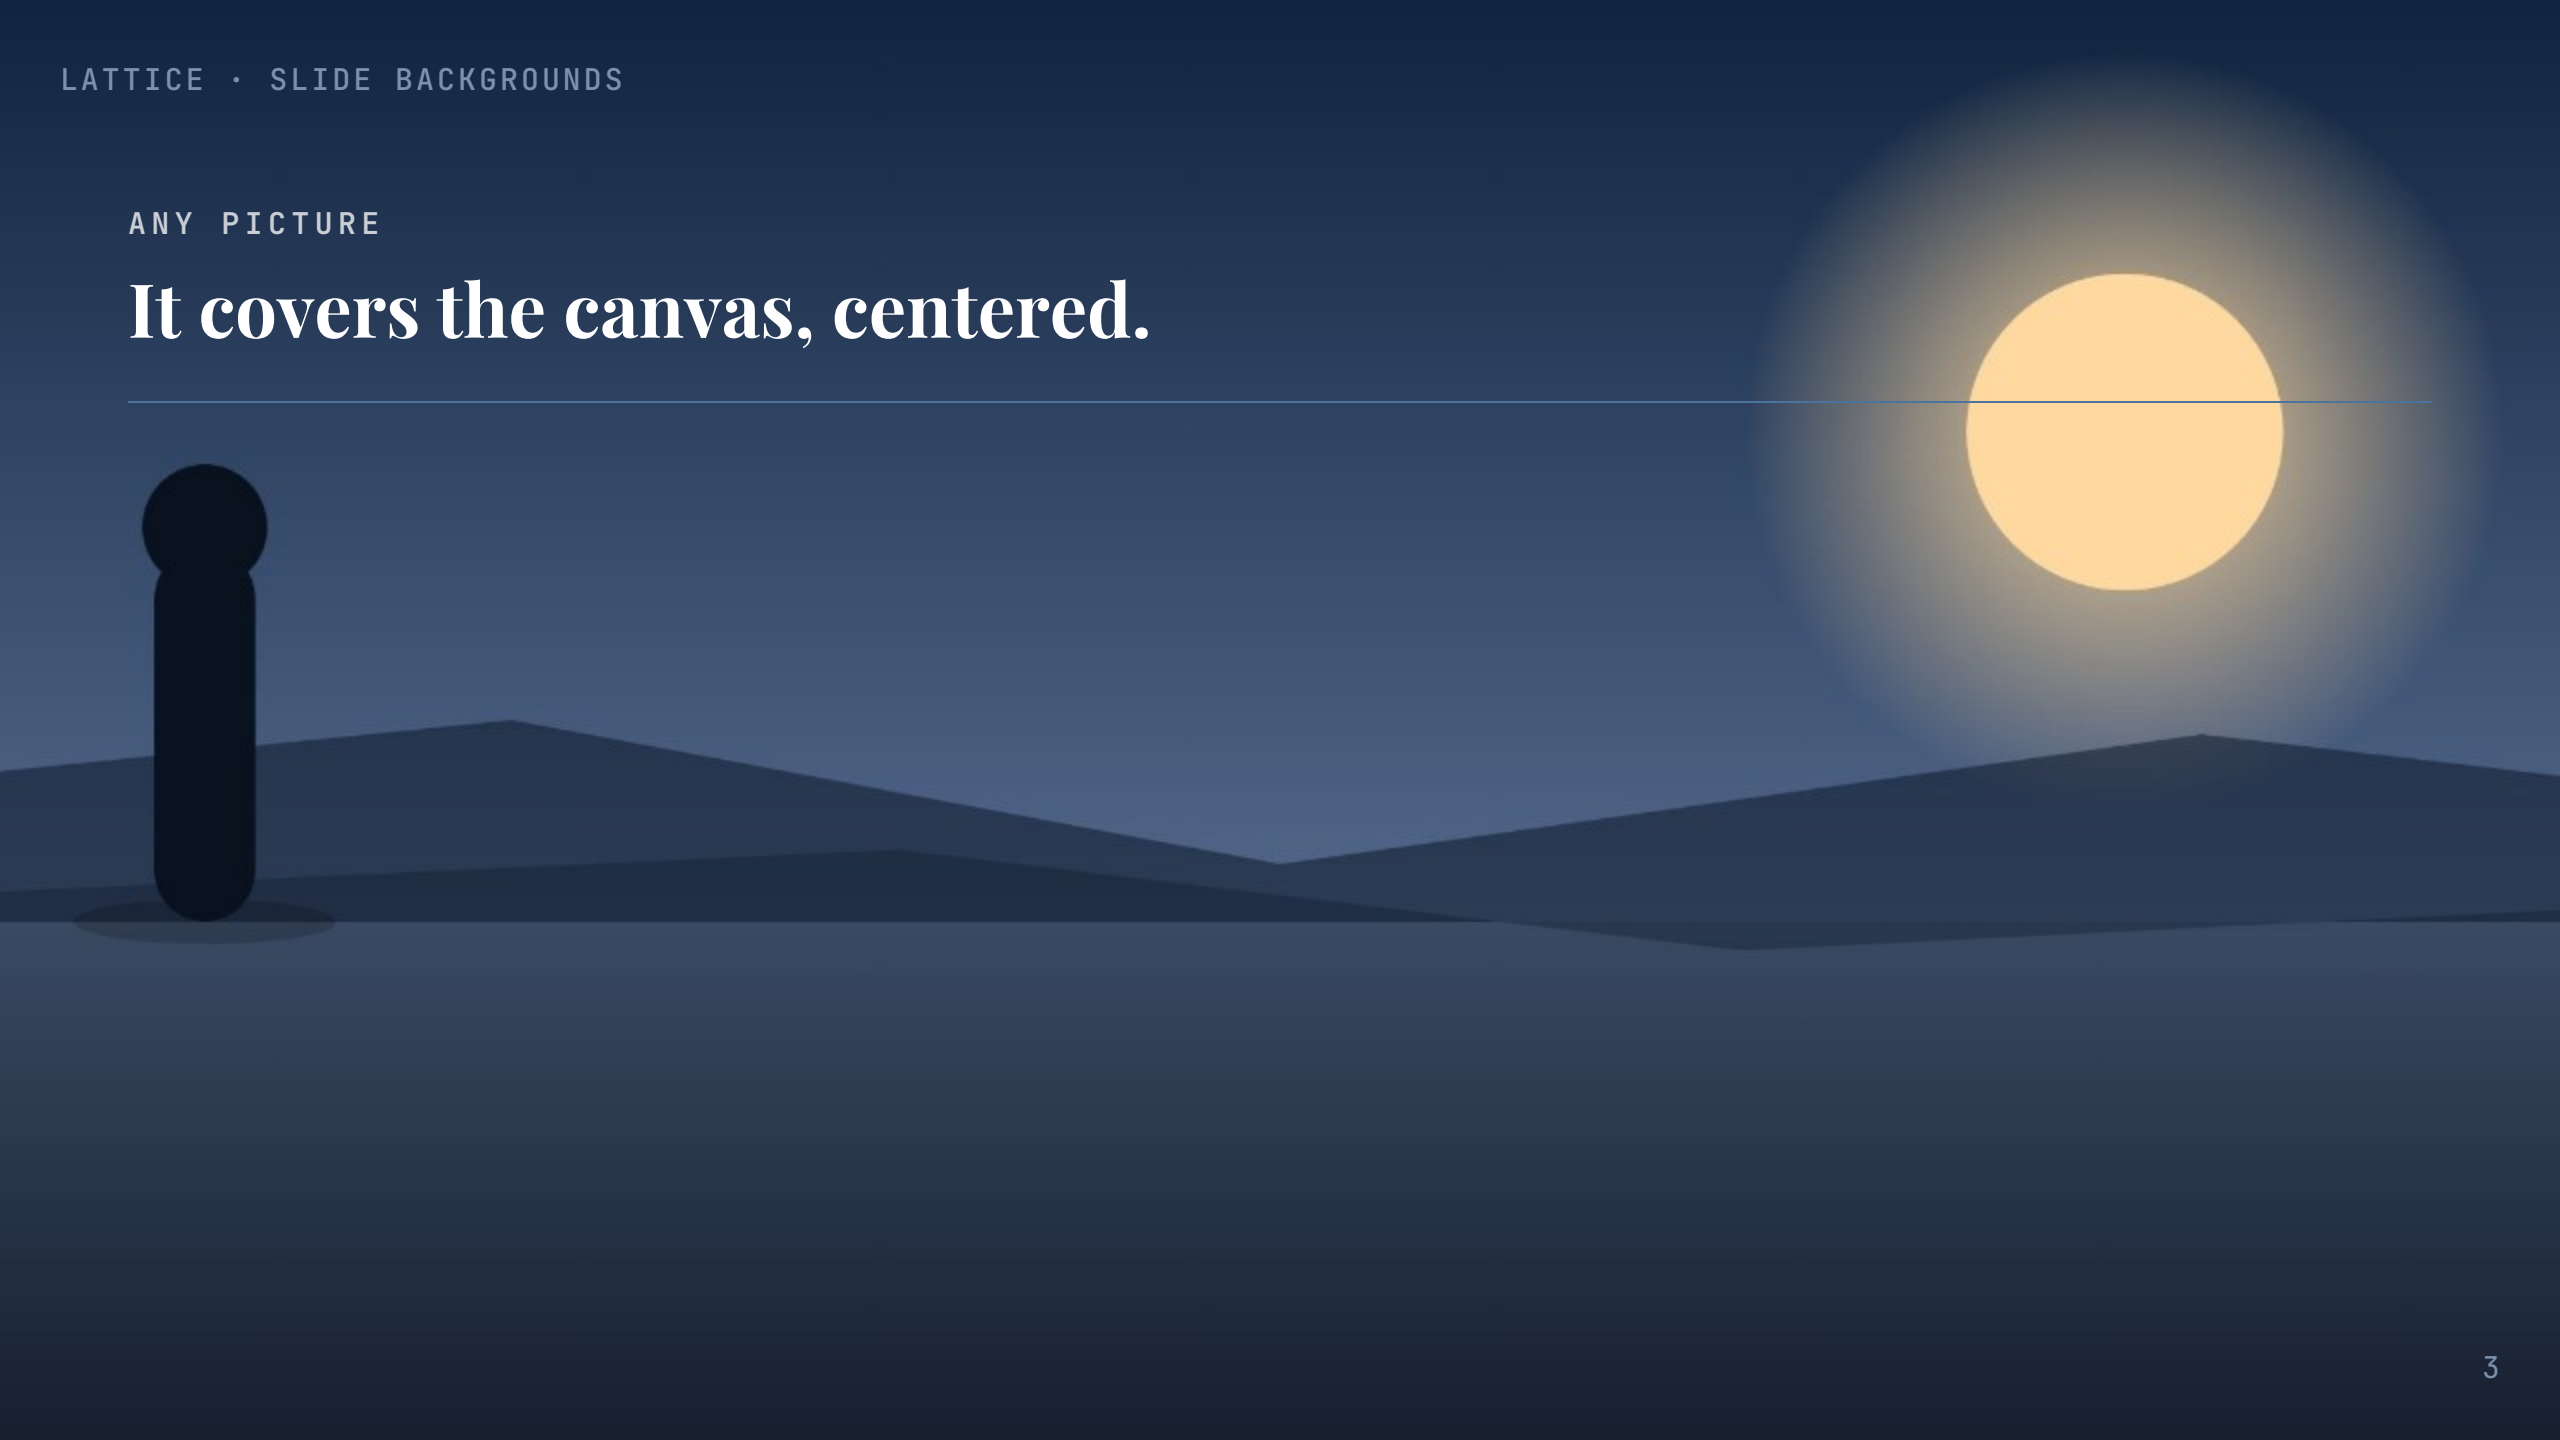

FULL-BLEED BACKGROUND

The photo is the slide's background.

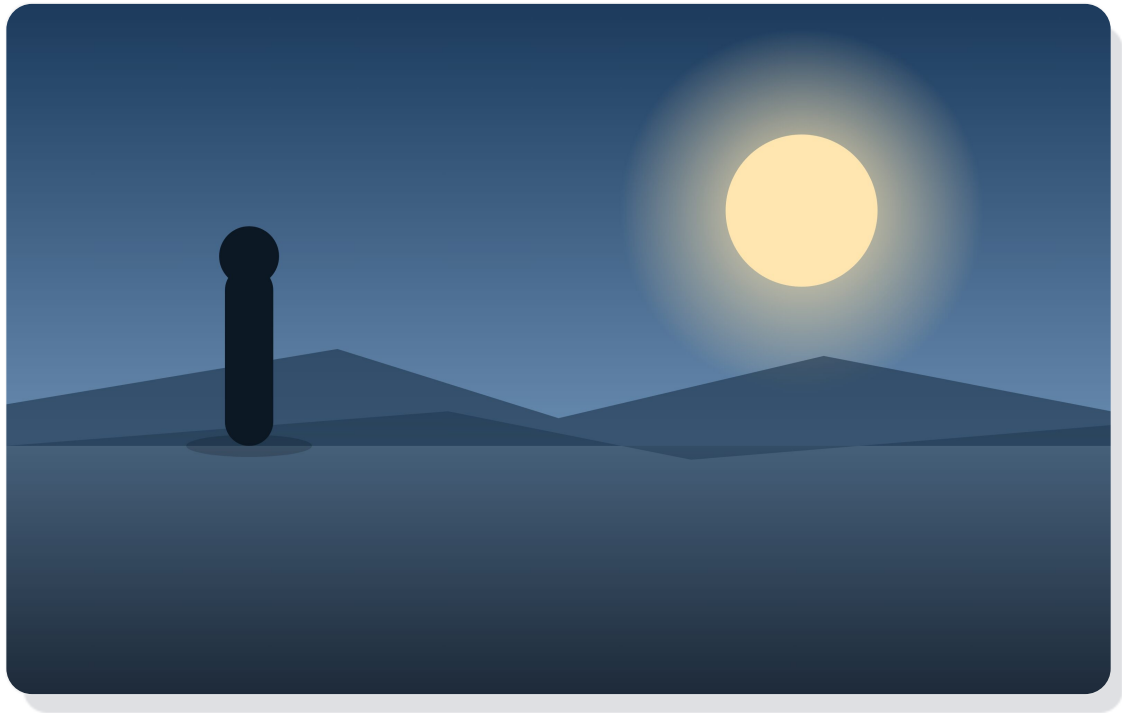

ANY PICTURE

It covers the canvas, centered.

Beside the text, use the image layout.

`![bg right](…)` on an `image` slide sets the picture next to the words. On any other slide, `lint:deck` now warns that `right` does nothing.

SAME IN EVERY EXPORT

Every export agrees.

ONE RENDERER, ONE ANSWER

A background is a background.

Write `![bg]` on any slide, or use `image` to set it beside the text.
