When NOT to reach for kpi.

Decorative pills without status semantics

The pills read as status, not freeform tags. Status color is assigned by each KPI's row position within the modifier — the engine never reads the pill text — so reserve them for the status vocabulary the position implies (`On plan`, `At risk`, `Breaching`, `Compliant`, `Remediating`).

A fifth metric — or a fourth that is not terse

The supports divide whatever the title and eyebrow leave them, so count trades against label length. Measured at a **wide** @size — the box a deck is authored in, and the one where nothing paginates past the budget: three is the allowance, and a short label plus a target line fits up to

Reaching for attention or spotlight to carry a fifth metric

`attention` highlights the metric that needs the room; `spotlight` monumentalizes one number. Both spend most of the stage on a single tile, so past four the hierarchy they exist to create collapses — split into two slides rather than crowding the hero.

No targets, no trends

If the KPIs carry only current values, the slide is a stats row, not a kpi dashboard. Use stats and reclaim the room.

RELATED COMPONENTS

See also.

`stats` — metric row without targets or status pills

`big-number` — a single number is the whole argument

`split-panel` — one KPI with a paragraph of supporting prose

`progress` — completion percentages across parallel
workstreams

`timeline-list` — milestones in time, not metrics at a moment
