A pill in a label stays in the label

An inline pill, check or bold word in the middle of a list item no longer splits the item into stacked pieces. Eight layouts, one sentence each.

Step titles keep the pill in the sentence.

STEP 01

Pilot in the EU region LIVE and collect feedback

Weekly review with the field team ✅ before each wave.

STEP 02

Expand to the US region BETA once the pilot clears

Budget approved ✅ and hiring ⛔ still open.

STEP 03

Open APAC PLANNED after the second wave

Needs legal sign-off ❓ on data residency.

A status tag in the middle of a row stays in the row.

- Signal taxonomy RATIFIED agreed in workshop four of three
- Scoring weights agreed by the steering committee — SIGNED
- Pilot teams trained, AT RISK two still "circling back"
- Exec sponsor confirmed for the **launch comms** — OPEN

Plan names keep their pills, and the price keeps its slot.

Vendor North PILOT quote

$38 / seat / mo

- Signal-intake connectors
- ~~Calibration weights exposed~~

For teams that enjoy renewals.

MOST POPULAR

Vendor West NEW quote

$52 / seat / mo

- Signal-intake connectors
- Calibration weights exposed

For teams that enjoy nicer renewals.

Build in-house

4 engineers

- Signal-intake connectors
- Exit without repricing

For us, apparently, again.

A verdict title can carry a pill without stretching it.

Path A LEGACY · **The spreadsheet**

Speed · Auditability

Open everywhere, version unknown. No trace.

Path B BETA · **Vendor North**

Speed · Auditability

Clean intake, real audit trail.

Path C NEW · **Vendor West**

Speed · Auditability

The better demo, by some distance.

Path D PLAN · **Build in-house**

Speed · Auditability

All criteria, inside the budget. Recommended.

Quadrant titles hold a pill and a slash on one line.

Coverage · Cost

High coverage BEST **/ Low cost**

In-house build, cheapest once the slide omits the engineers.

High coverage / HOLD **High cost**

Vendor West, premium seats; the roadmap is mostly our logo.

Low coverage OLD **/ Low cost**

The spreadsheet, two criteria, no cost, popular anyway.

Low coverage / High cost

Vendor North, narrower than the demo, once connectors were priced.

Card titles take a mid-title pill and a bold word.

Signal v2 Intake

Weekly structured collection across customer conversations and market data.

Scoring Model NEW

Each signal scored on **three dimensions**: confidence, recency and strategic relevance.

Decision LIVE Log

Every decision recorded with the signals that informed it, `audit-ready`.

Calibration Loop

Monthly retrospective that compares predicted outcomes to actual ones.

Plain lists flow around inline code and bold words.

It does **not make decisions**, it structures the information that humans use to decide.

It does not replace customer discovery, it scores and routes what `discovery` surfaces.

It does not work without the `Decision Log` REQUIRED because calibration needs outcome data.

It does not scale down to individual features, it is built for prioritization above **P2**.
