MERMAID · MOTION

A diagram builds in, like a chart

This deck sets `motion: on` and nothing else. Every Mermaid diagram in it now builds the way a chart does: the containers first, then the boxes, then the arrows between them, then the words.

What changed, and where it runs

A Mermaid diagram is an SVG, but it declared no motion roles, so `motion:` passed it by.

The runtime now tags each drawn diagram with the roles a chart emits. It builds in the Playground, the Studio, Present and the HTML player.

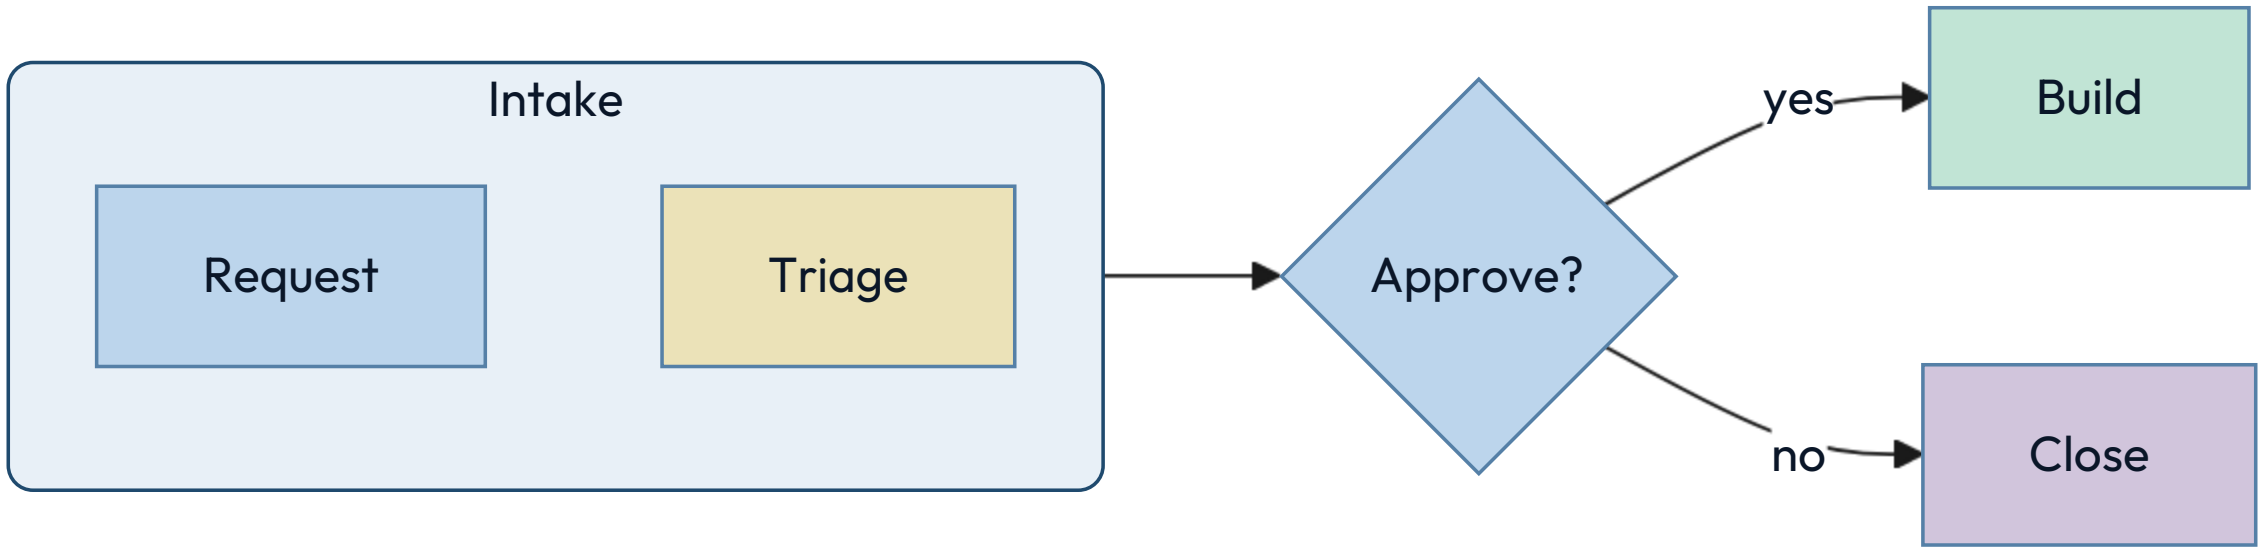

KEY INSIGHT

The PDF is a still, as for every chart. Open the deck live to watch it build.

FLOWCHART · BOXES, THEN ARROWS

DIAGRAM MOTION · MOTION: ON ANIMATES A MERMAID DIAGRAM LIKE A CHART

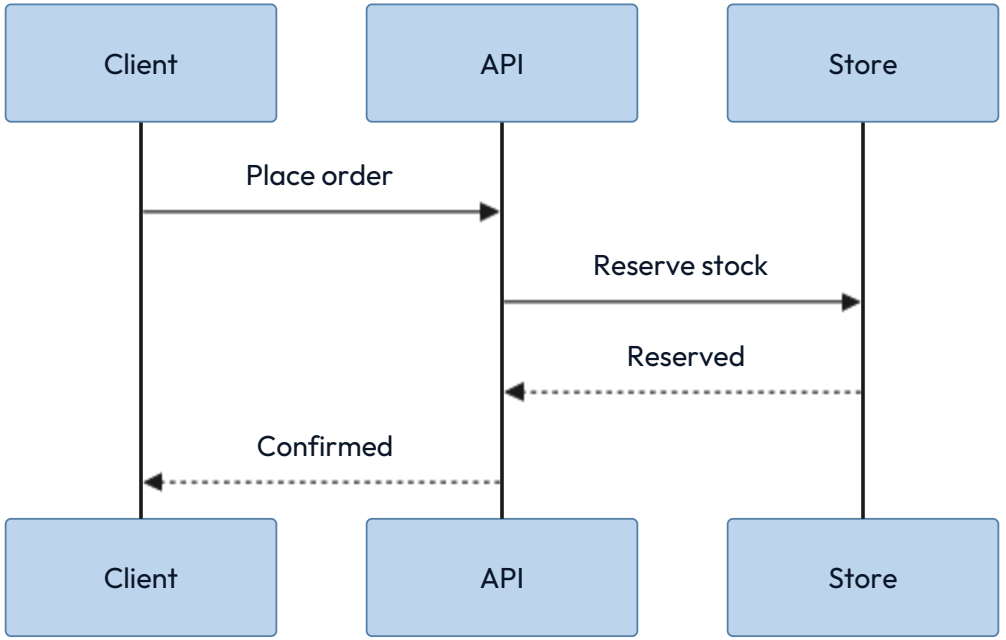

A subgraph frames the boxes before the arrows arrive.

SEQUENCE · ACTORS, THEN MESSAGES

DIAGRAM MOTION · MOTION: ON ANIMATES A MERMAID DIAGRAM LIKE A CHART

The participants stand up, then the messages run in order.

STATE · SAME BUILD

DIAGRAM MOTION · MOTION: ON ANIMATES A MERMAID DIAGRAM LIKE A CHART

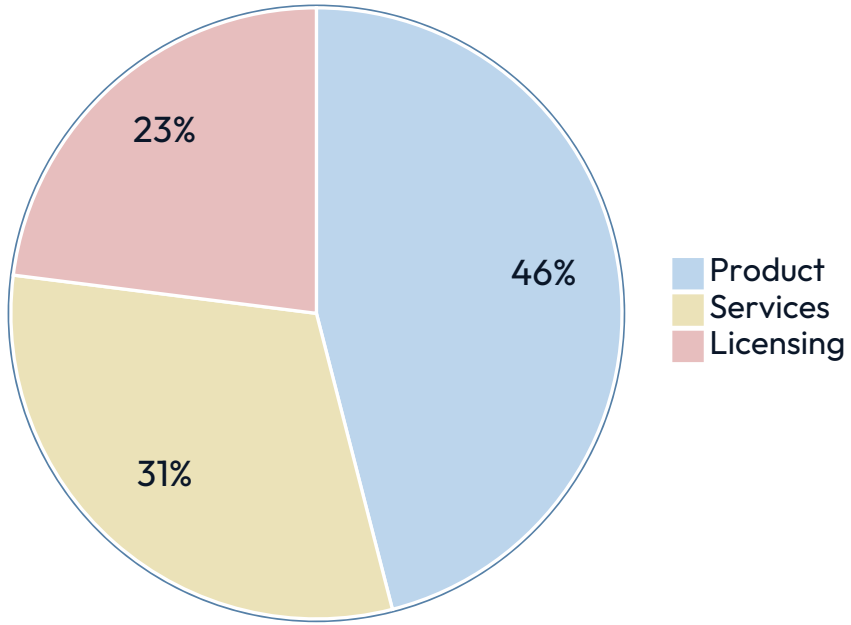

Every family on Mermaid's graph renderer builds the same way.

PIE · THE DISC ARRIVES WHOLE

DIAGRAM MOTION · MOTION: ON ANIMATES A MERMAID DIAGRAM LIKE A CHART

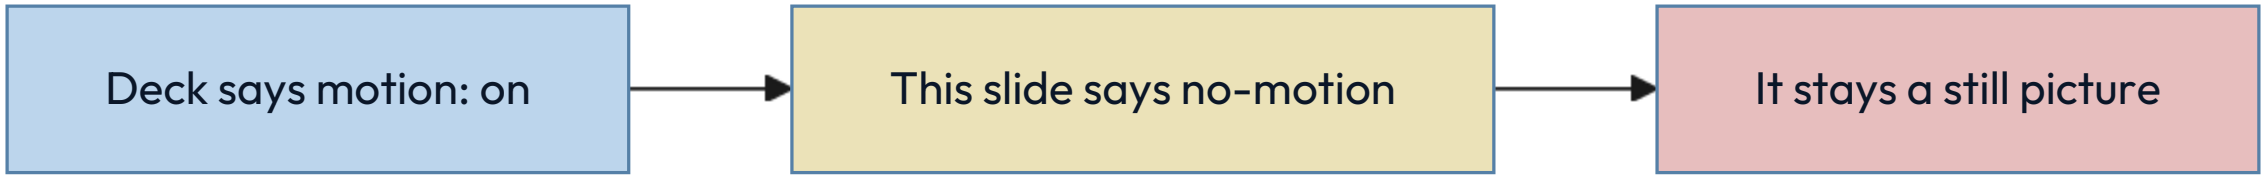

A pie reveals as one disc, exactly like a chart pie.

OPT OUT · ONE SLIDE

DIAGRAM MOTION · MOTION: ON ANIMATES A MERMAID DIAGRAM LIKE A CHART

A slide can still opt out with no-motion.

What stays a still

A family Mermaid draws with a renderer we have not mapped, such as a user journey, gets no roles and stays a still picture.

Viewers who ask the OS to reduce motion see every diagram settled, with no entrance, as they do for charts.

KEY INSIGHT

Mapped: flowchart, state, class, ER, mindmap, sequence, pie, gantt, XY chart, quadrant, git graph and timeline.
