PINNED

A FEATURE DEMO

One bar, the client's color

`spectrum: solid` repaints the brand bar in the theme's single `--accent` — no Lattice rainbow. Set the accent to a client's brand and the whole deck follows.

The bar above is solid, not a rainbow

Every section paints the brand bar from two tokens — `--spectrum-bar` (the top border)
and `--spectrum-bar-vertical` (a divider's left rail). The `spectrum:` register sets
the style they read, so one setting recolors every place the bar appears.

The divider rail follows too

`spectrum: off` — a clean edge

A per-slide `no-spectrum` overrides the deck: no bar at all, for a slide (or a whole deck) that wants nothing at the top. The rest of this deck keeps the solid accent bar.

Three values, one register

`on`

The Lattice rainbow — the default. Omit the key entirely.

`off`

No brand bar. A clean top edge and no divider rail.

`solid`

A single `--accent` bar — the white-label seam for a client's brand color.

Where it lives

`spectrum:` is a deck front-matter register — a sibling of `finish:` / `mode:` / `stamp:` / `tone:`. A typo is caught as `unknown-spectrum`; a per-slide `spectrum-*` token overrides the deck. It composes with `accent` and `tone: edge`, the per-slide brand-bar recolors.

REVISED

Your bar, your brand

`spectrum: off | solid` *in front matter — the rainbow is just the default.*
