word-cloud

Spiral-packed word cloud — items sized by weight.

Weight is meaning in a word cloud.

focal crowns one word the center.

A word cloud visualization where the word 'variants' is the largest and most central element, rendered in a large, blue, serif font. Surrounding it are several smaller words: 'gallery' in orange, 'declared' in grey, 'docs' in grey, and 'manifest' in green. The words are arranged in a circular pattern around the central 'variants'.

When NOT to reach for word-cloud.

Precise comparisons

If the audience needs to know that 'manifest' is 1.6× 'function', the spiral packing actively misleads. Use `progress` or a bar chart where the eye can compare lengths directly.

Two or three words

A three-word cloud is a list with extra steps. Use `stats` for a metric row or `big-number` for a single weighted headline.

Multi-word phrases

Each li should be a single token. Multi-word phrases blow out the layout and crowd the spiral; if your data is phrases, normalise to keywords first or use `quote` for verbatim text.

RELATED COMPONENTS

See also.

`progress` — the weights need precise visual comparison

`stats` — the headline metrics are independent numbers, not a corpus

`piechart` — the items are parts of a whole, not free-form themes

`quote` — the verbatim language matters more than the frequency

`list` — single-line takeaways — the `takeaway` variant
