

IMAGERY · CANVAS · PROSE

# image

Image as the slide's anchor, with optional text alongside — composition adapts to the asset and the deck.

## The image layout reads the asset's shape.

Two-thirds of trials that reach the first generated report convert to paid; the ones that stall at workspace setup almost never do. Hand the layout any photo — it resolves the composition from the asset's shape.

## clean drops the caption chrome.

Two-thirds of trials that reach the first generated report convert; the ones that stall almost never do.

# split gives a portrait its full column.

A portrait photo wants its full height. We give it a column and let the argument run alongside.

## **spotlight lets a panorama own the frame.**

When the photo already matches the canvas, let it carry the slide — the message rides in a solid card so it never fights the image.

**gallery mats the exhibit with a placard.**

The whole asset on a matte with a placard. For diagrams and screenshots where the  
whitespace is the point.

statement rides the  
title on a scrim.

The title rides the photo on a scrim — a deliberate, editorial choice.

**mirror lands the  
image on the left.**

Text leads from the right; image anchors from  
the left.

## The image layout reads the asset's shape.

Two-thirds of trials that reach the first generated report convert to paid; the ones that stall at workspace setup almost never do. Hand the layout any photo — it resolves the composition from the asset's shape.

# When NOT to reach for image.

---

## Decorative stock photo

A generic photograph of 'people in a meeting' next to a content slide is filler. Use `content` and trust the prose; reserve image for visuals that argue for themselves.

## Image too small to read

A diagram or screenshot small enough to fit inside a half-canvas text slot is unreadable from the back of the room. Reach for `image gallery` (contains it whole) or `image spotlight`, or move the diagram to its own `diagram` slide.

# When NOT to reach for image.

---

## Image with five paragraphs of caption

If the prose dominates and the image is a sidebar, you have a `content` slide that happens to have a photo. Either trust the image (drop the prose) or trust the prose (drop the image).

RELATED COMPONENTS

# See also.

`diagram` — the visual is a Mermaid graph, not a photo or screenshot

`content` — the slide is mostly prose with one inline visual

`title` — the image is a bookend hero, not the body of a slide

`quote` — the slide is a quotation, not an image
