FEATURE · FOCUS & HIGHLIGHTING

Focus one thing.

A dense slide is a reading slide. When you present it live, you focus the room on one thing at a time — a row, a column, a card, a line of code. `_focus:` makes that a one-line directive, and it survives PDF and PPTX.

The slide stays dense.
The attention does not.

You don't simplify the data — you direct the eye. One ordinal grammar addresses any surface: `row`, `col`, `cell`, `item`, `line`. The look is content-aware by default, and palette-blind.

`_focus: row 4` — ring the deciding criterion.

CRITERION	CHORUS	PRODUCTBOARD	NOTION	SPRIG + LOG

`_focus: item 3` — spotlight the card that matters.

Signal Intake

Weekly structured collection across customer conversations, market data, and competitive moves.

Scoring Model

Each signal scored on confidence, recency, and strategic relevance, reviewed quarterly.

Decision Log

Every decision recorded with the signals that informed it and the criteria applied.

Calibration Loop

Monthly retrospective comparing predicted outcomes to actual outcomes.

`_focus: line 8` — the line that matters.

```
import { DecisionFramework } from "@company/signal-sdk";

const framework = new DecisionFramework({
  configFile: "./framework.config.json",
});

// Calibration depends on logging every decision
const entry = await framework.decisions.log(decision, { signals });
```

`_focusStyle: blur` — defocus the rest, the camera way.

Signal Intake

Weekly structured collection across customer conversations, market data, and competitive moves.

Scoring Model

Each signal scored on confidence, recency, and strategic relevance, reviewed quarterly.

Decision Log

Every decision recorded with the signals that informed it and the criteria applied.

Calibration Loop

Monthly retrospective comparing predicted outcomes to actual outcomes.

`_focusStyle: highlight` — tint the row, dim nothing.
