roadmap

Phased multi-workstream grid — phases across the top, workstreams down the side.

H2 2026 · ROLLOUT PLAN

The roadmap grids workstreams against phases.

When NOT to reach for roadmap.

One workstream

A single row of phases is a `timeline` or `list-steps`, not a roadmap. Roadmap earns its grid only when at least two workstreams move in parallel.

No state markers

A grid of bare deliverables loses half its value. Add state markers (`[x]` `[-]` `[!]` `[?]` `[ ]` `[/]`) so the audience reads progress alongside scope.

Past five workstreams

More than five rows compresses cell text and the lane stripes lose their categorical read. Group adjacent workstreams or split by phase.

`gantt` — continuous task bars across a date axis rather than discrete phase cells

`kanban` — current state by stage rather than phased schedule

`list-steps` — single workstream sequence without parallel lanes

`verdict-grid` — options scored against shared criteria, not phased delivery

`checklist` — single list with state markers, no workstream dimension
