obligation-matrix

Regulation × obligation grid — state-marker cells encode applies / partial / exempt at a glance.

The matrix grids obligations across regimes.

REGULATION	NOTICE	CONSENT	RETENTION	BREACH	DSAR

Each lane stripe signals that the row is its own regime, not a rank.

Six regimes by five duties is the grid ceiling.

When NOT to reach for obligation-matrix.

Two regimes only. Past one row vs another the grid loses its purpose. Use `compare-prose` or `compare-table` for two-regime comparisons.

Mixed cell content. Don't mix state markers with prose values in the same matrix — the cell width has to grow to fit prose and the marker grid collapses. Pick one cell type.

Missing legend. The trailing paragraph naming filled/half/empty is what onboards a first-time reader. Skipping it forces the audience to guess the mapping.

RELATED COMPONENTS

See also.

`compare-table` — cells are textual values, not state markers

`verdict-grid` — options scored against criteria with a per-card layout instead of a table

`matrix-2x2` — two axes, four cells, qualitative placement

`checklist` — one set of obligations against one regime, not many
