

FEATURE DEMO

claim

Give the content the stage.

Four presets, one purpose.

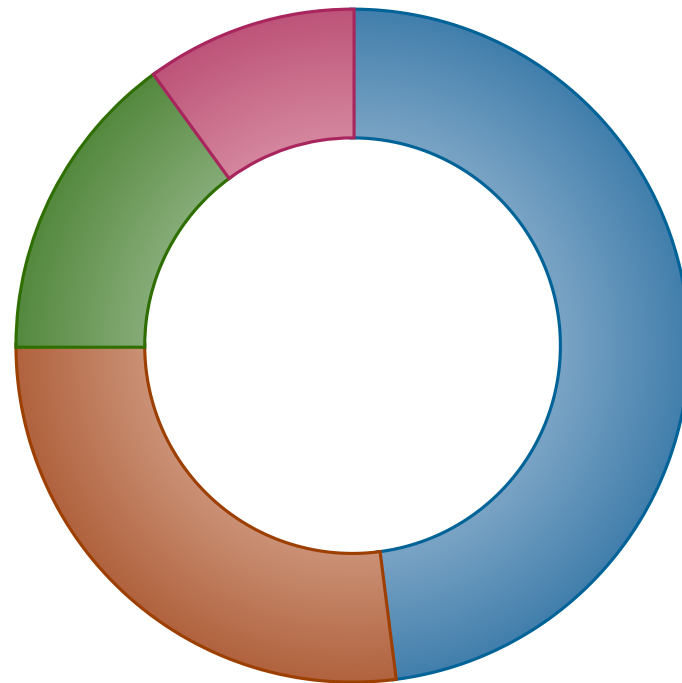

`claim` is how much of the frame the content claims vs the chrome. Set it deck-wide (`claim: hero`) or per slide (`claim-hero`).

- **framed** — the default: full masthead, footer, section rail.
- **quiet** — recede the section rail + meta bay; keep the title and page number.
- **hero** — drop the bands; the content fills the stage (the page number reads through).
- **bleed** — edge-to-edge, no safe margin. Media and canvas.

SECTION 01

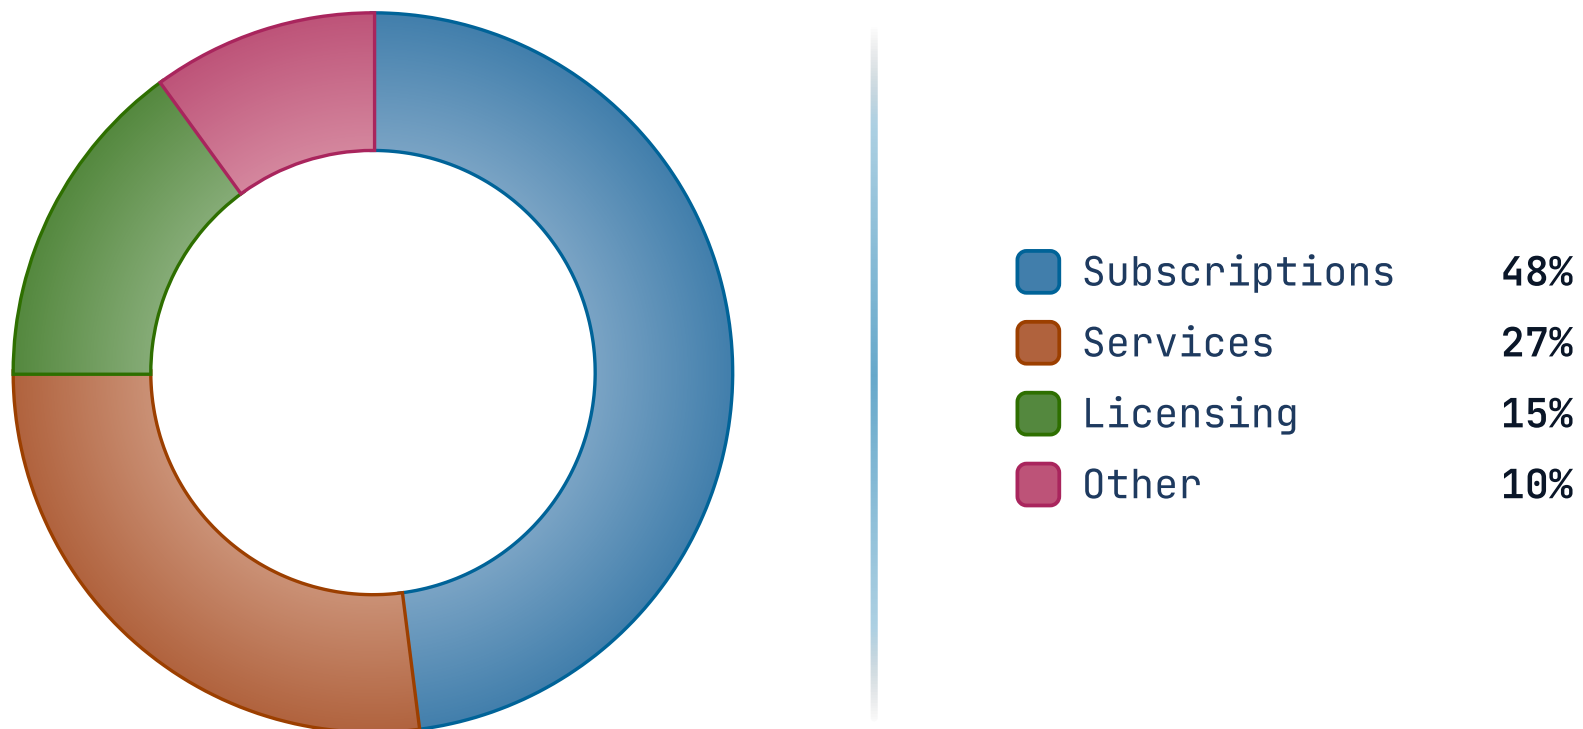

The dial, on one chart.

framed — full chrome.

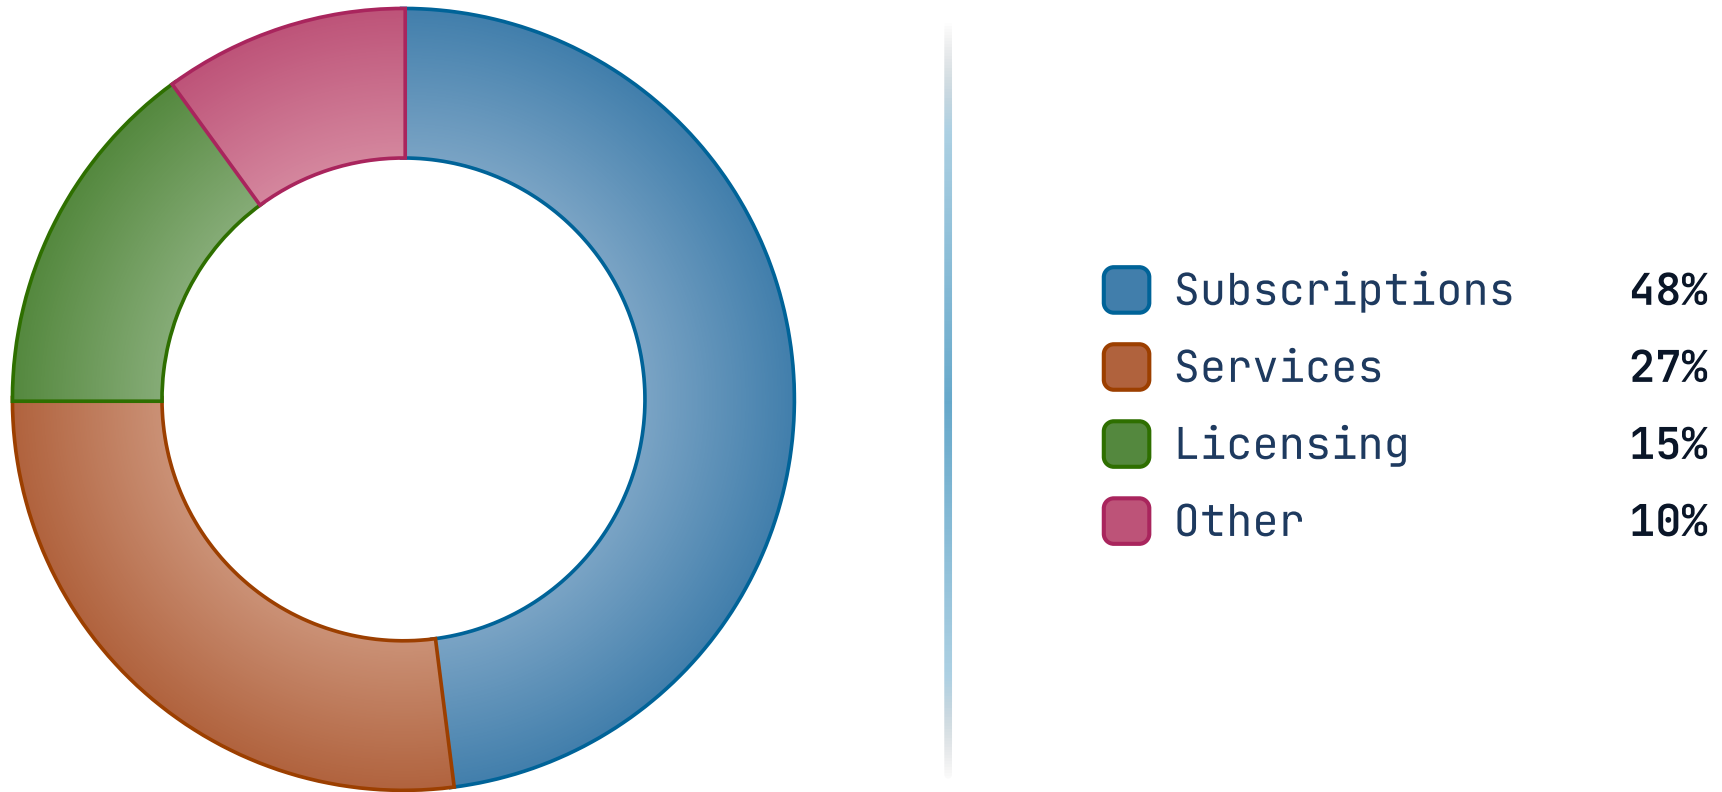

Subscriptions	48%
Services	27%
Licensing	15%
Other	10%

quiet — the rail and meta recede.

hero — the chart takes the stage.

Nearly half came from subscriptions this year.

RECALL

92%

of an audience remembers a single number
from a deck.

The new endpoint.

```
app.post('/api/v2/auth', async (req, res) => {  
  const session = await issueSession(req.body);  
  res.json({ session });  
});
```

BLEED

100%

of the frame — no safe margin, so a dense
table opts out.

CLAIM

Content takes the stage;
you price the cost.

*Quiet trades the section rail. Hero trades
the bands. Bleed trades the safe margin.*
