

INVENTORY • LEDGER • STRUCTURE

# actors

Roster of responsibilities owned by named actors.

# The actors ledger names who owns what.

**Owns one row**

Each actor

A verb-first responsibility, twelve words at most.

**Reads top to bottom**

The ledger

Order carries seniority or sequence.

**Answers by name**

The role chip

The inline code names the seat.

**Stops at six rows**

This layout

Past six, reach for list-tabular.

# Seven rows is where the ledger maxes out.

|                                                                               |             |
|-------------------------------------------------------------------------------|-------------|
| <b>Row one</b>                                                                | First seat  |
| Even at the ceiling, every row keeps a verb-first responsibility line.        |             |
| <b>Row two</b>                                                                | Second seat |
| Eighteen words is the hard budget; this row spends most of them deliberately. |             |
| <b>Row three</b>                                                              | Third seat  |
| Rows stay parallel or the column of chips stops lining up.                    |             |
| <b>Row four</b>                                                               | Fourth seat |
| Middle rows read fastest; bury nothing important here.                        |             |
| <b>Row five</b>                                                               | Fifth seat  |
| The eye is tiring by now — keep these short.                                  |             |
| <b>Row six</b>                                                                | Sixth seat  |
| The soft ceiling was one row ago.                                             |             |
| <b>Row seven</b>                                                              | Last seat   |
| The hard stop; an eighth row means a second slide.                            |             |

# The actors ledger names who owns what.

**Owns one row**

Each actor

A verb-first responsibility, twelve words at most.

**Reads top to bottom**

The ledger

Order carries seniority or sequence.

**Answers by name**

The role chip

The inline code names the seat.

**Stops at six rows**

This layout

Past six, reach for list-tabular.

# When NOT to reach for actors.

## **Process sequence**

If the rows describe stages in order, use list-steps or process-flow. actors is for parallel ownership, not handoff sequence.

## **Long per-actor prose**

More than one sentence per row crowds the ledger. Move the detail to a dedicated slide and keep actors as the index.

## **Roles without names**

If the labels are job titles in the abstract ("the engineer"), reach for cards-stack or list. The actors layout earns its weight when the names are named.

RELATED COMPONENTS

# See also.

`list-tabular` — rows are reference entries, not owners

`cards-stack` — each item needs two sentences of body text

`list` — declared statements — the `principles` variant

`glossary` — the left column is a term, not an actor
