When NOT to reach for regulatory-update.

Single rule's lineage

If the slide walks one rule from statute through case, use `authority-chain`. regulatory-update is a period digest.

Past six rows

More than six items compresses the row gap and the citation chips run out of room. Split by jurisdiction.

Missing summary or citation

Each row needs all three sub-items — citation, summary, effective date. Otherwise the row reads as rumor.

RELATED COMPONENTS

See also.

`authority-chain` — single rule walked statute → regulation → guidance → case

`list-criteria` — flat enumeration of requirements without dates or citations

`list-steps` — lighter dots-on-a-spine sequence — the `timeline` variant

`list-tabular` — structured metadata per row but no regulatory framing
