PIECHART · SPEAKER-NOTES CHANNEL

Per-slice detail, in the PDF.

A pie slice can carry an indented sub-list. On screen it reveals on hover/tap; in the exported PDF it rides the slide's **speaker note** — so a reader gets the context off the slide face, and the chart pixels stay byte-identical.

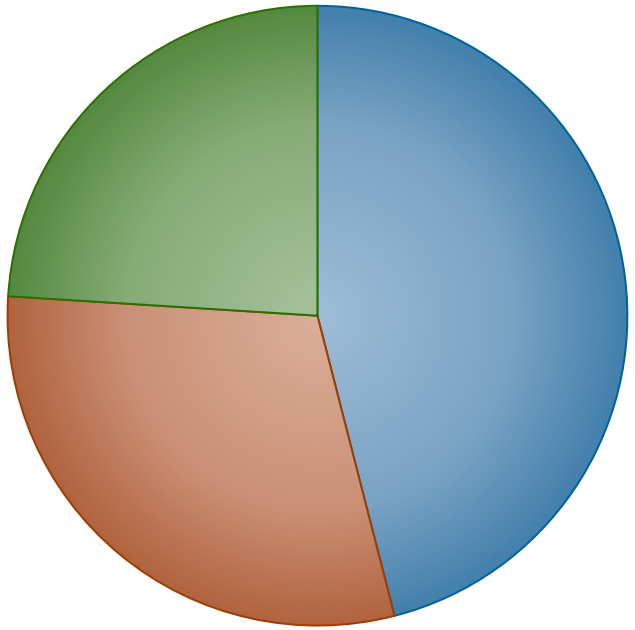

One source, two surfaces.

The sublist under a slice powers **both** the Present-mode reveal popover **and** the static-PDF speaker note (`Label (value): item · item`). Open this PDF's note annotations — or the `.notes.txt` sidecar — to read each slice's detail.

FY26 · $4.2M INFRASTRUCTURE

Where the infrastructure budget goes.

The chart shows the split; the notes carry the why.

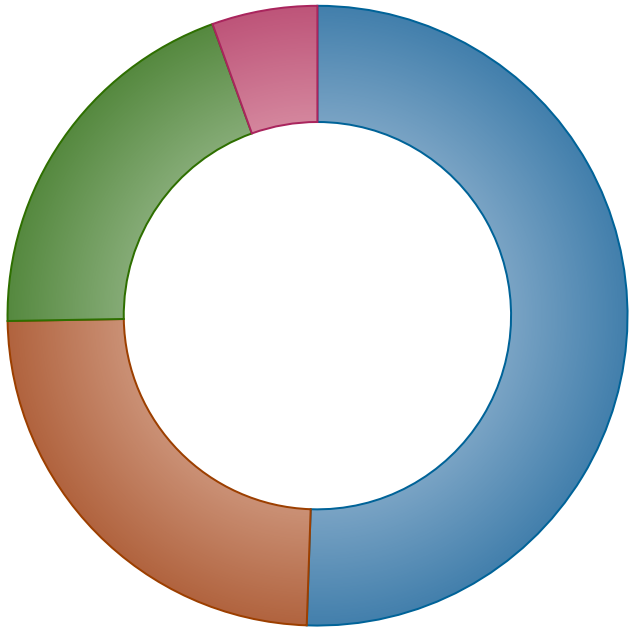

Cloud	46%
On-prem	30%
Edge / CDN	24%

Q2 · 1,840 PERSON-HOURS

How the planning quarter was actually spent.

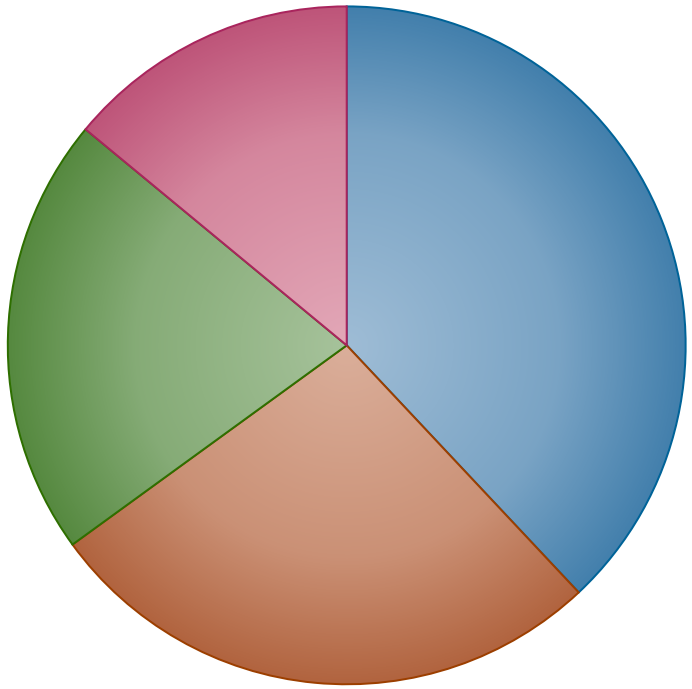

Nearly half went to producing decks; deciding was the smallest slice.

Deck production	46%
Meetings about meetings	22%
Realigning on priorities	18%
Actually deciding	5%

PIPELINE · 312 OPPORTUNITIES

Where deals stall in the funnel.

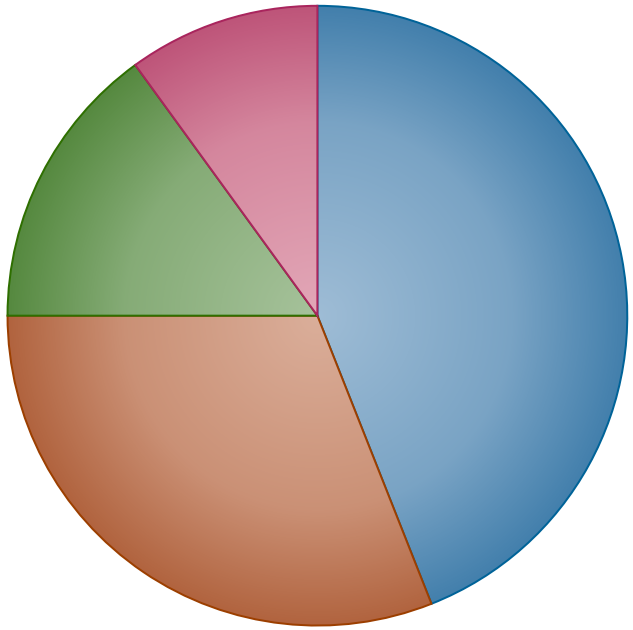

Discovery	38%
Procurement	27%
Pilot	21%
Closed-won	14%

HEADCOUNT · 240 FTE

How the org splits by function.

*No sublists here — so this pie emits **no note** and exports exactly as a plain pie always has.*

Engineering	44%
Go-to-market	31%
Operations	15%
G&A	10%

OPEN THE ANNOTATIONS

Read the notes.

The detail never crowds the boardroom slide — it waits in the speaker-notes channel for the reader who wants it.
